HARDWARE

EIGHTH ANNIVERSARY
APRIL 10TH 1898.

HARDWARE ASSOCIATION NUMBER.

Digitized by Google

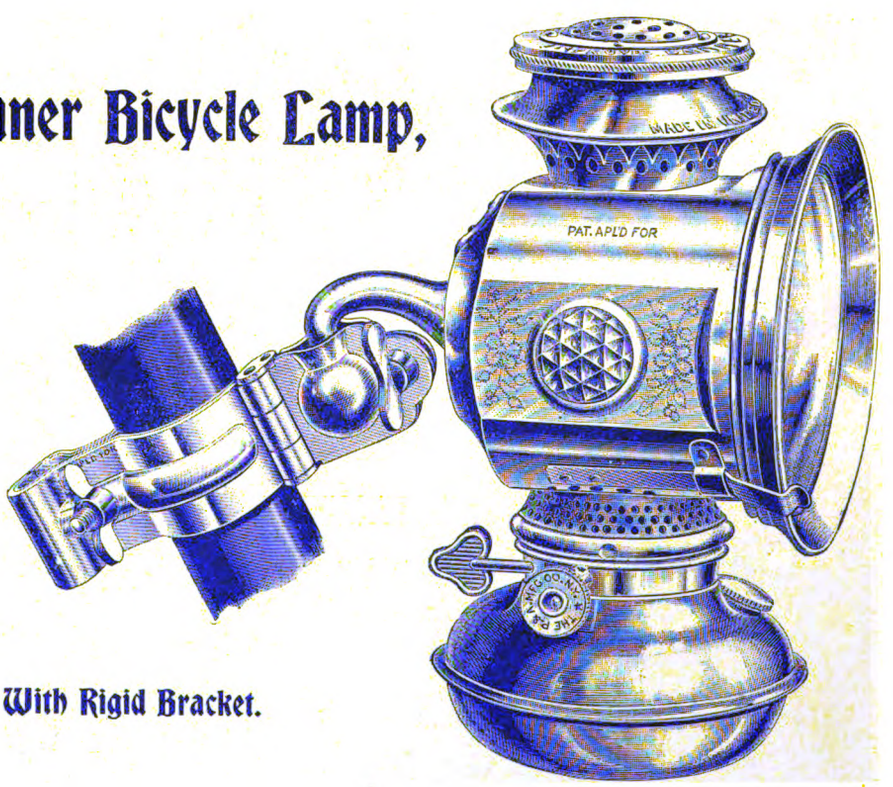
Workmanship, finish and burning qualities as near perfect as it is possible to make a Bicycle Lamp.

THE LIGHT THAT LEADS

. . . The next best bicycle lamp costs more than the Banner. The Banner makers have been making the best kerosene lamp goods for 25 years and have the best factories and the best lamp-making machinery in the world. That's the reason for both the high quality and the low price of the

BANNER CYCLE LAMP

. . . The highest priced lamp has no advantage over the banner, while the Banner has advantages not found in any other.



The Wick Lock is the only practical one. Once the Wick is adjusted nothing can move it up or down till you unlock it.

Has a larger and better Lens than any other Bicycle Lamp. Is 3 in. diameter, Double Convex and polished.

Guaranteed Wind-proof under normal conditions in Riding.

All parts removable for easy cleaning. No lamp compares with it in this respect.

Banner Bicycle Lamp,

With Rigid Bracket.

The Bracket having Ball and Socket Joint, gives adjustment to any angle. It can be attached to the post or either fork. We furnish the Brackets only with Plate Attachment.

The Hartzell Self-Draining Hose Reel

IT SELLS RAPIDLY.

Patented Jan. 5, 1897. Other improvements applied for.

It is scientifically and mechanically constructed.
It is a nice ornament and a great convenience in spraying and watering a lawn.
The hose is not kinked, twisted, crushed or drawn to a tension, thus avoiding the breaking of either the inner or outer walls of the hose which protects the fabric and prevents it from becoming water soaked, which usually causes the rapid destruction of the hose.
It drains all the water out of the hose, after it has been reeled, and keeps it always in good order, ready for service.
Each section of hose is independent of the others and may be easily detached at the top or bottom.
It sells at sight, because any person who owns a garden hose can readily see its advantages and superiority.

Jobbers are especially solicited to handle our goods to whom lists and prices will be furnished upon application.

DEALERS ask your Jobbers for the HARTZELL SELF-DRAINING HOSE REEL and insist on getting it.

If they will not supply you address us for prices, circulars and lists.

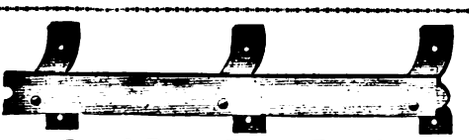
THE FULTON SIGN and PRICE MARKERS

Are the best, most complete and cheapest outfits for Business men to make their own Show and Price Cards, to print Shelf Labels, mark Boxes, Barrels, etc., etc. There is in fact no business where they cannot be used to advantage. Newspapers are using them for their Bulletin Boards, Ministers for Church Notices, Theatres for Announcements, Restaurants for Bills of Fare, etc. Their price in comparison to their usefulness amounts to almost nothing; it saves the cost of Sign Painters and Ticket Writers. A Boy can do all the lettering required in the largest Department Store. They last a lifetime and can be used for every language. We have



50 DIFFERENT STYLES

to select from in sizes from ½ to 4-inch letters. For marking Boxes and Barrels for shipping, or labels, they are far superior to adjustable stencils; the work is done quicker and neater and without blurring, making it look as if printed on a printing press. Nearly 100,000 sets of the **Fulton Sign Marker** have been sold, and they are in use daily by all large wholesale and retail business houses in the United States. Goods can be bought direct from us, or through your nearest wholesale house. Complete catalogues in English and Spanish sent free. Address

CARD OF THANKS!

TAKING advantage of this anniversary of *Hardware*, and the surrounding atmosphere of good feeling and reminiscence, we wish to thank those Jobbers and Retailers who have aided us so heartily and so long in keeping the flies off the American people.

The great American citizen struts, with his thumbs in the armholes—or other holes—in his vest, and boastingly asserts: "There are no flies on me!"

"And why?" "Phillips keeps 'em off."

"And how does Phillips keep 'em off?"

"Phillips Screens are Reliable!"

Think of the millions of doors and windows protected by Phillips Screens! Think of the strained air, the strained perfume, the strained words of love and the strained dishwater that have gone through Phillips Screens—**But no flies.**

These Screens purify whatever they strain. Even gossip loses its wild uncertain aroma and becomes mellow and truthful after passing through a Phillips Screen.

We thank the Dear Public because it knows enough to appreciate such screens.

We thank our most excellent constituents the Retailers, because they know enough not to sell rubbish nor to try to deceive themselves and the public.

We thank our dear friends the Jobbers, because they know enough to get a fair profit out of Phillips Screens without ripping the life out of prices.

We thank all our blessed competitors because they know enough to endorse our patterns, by their faithful but fuzzy and besplintered imitations. The Lord will forgive them for falling short of our excellence because of the generously low prices they have necessarily made, and because of the aid they have given us in liberating

A FLY SPECKED PUBLIC.

And we thank *Hardware* for not doubling its advertising rates on this "card of thanks."

Yours gratefully,

THE A. J. PHILLIPS CO., Fenton, Mich.

Fly Wardens to Her Majesty--Columbia.

We make all kinds of

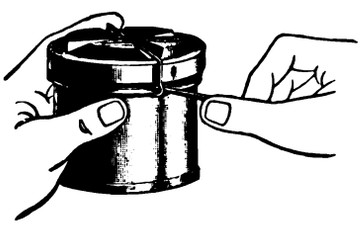
WHIPS

Our "**Plymouth Rock**" rawhide whips are lined with **Rubber** to exclude air and moisture, and then with our patent "**Textilene**" lining, to prevent the rawhide from twisting or bending. The rawhide is of the **very best quality.** These whips have been thoroughly tested in all kinds of weather, and we can recommend them to keep their shape better, and less liable to break than **any other rawhide whip ever made.**

AND

Especial attention is called to our patented "**Textilene**" and "**Plymouth Rock**" Whips. The Textilene lining consists of six flat cords of immense strength running equi-distant apart, the whole length of the whip and through the loop, making the strongest loop ever manufactured, and keeping the whip straight and adding greatly to its strength.

LASHES,



And make them well!

IS A GOOD ONE.

Morgan & Wright, Chicago Ill. [*Bicycle Tires*]: There can be no question about the advisability of using the Hardware trade as a means of disposing of bicycles and bicycle parts, and as to the efficiency of HARDWARE, we can only say what we would say in reply to an inquiry from any other publisher, i. e., we have no direct means of knowing whether our "ads" do us good or not. If we insert an "ad," it is on our judgment that the publication is a good one.

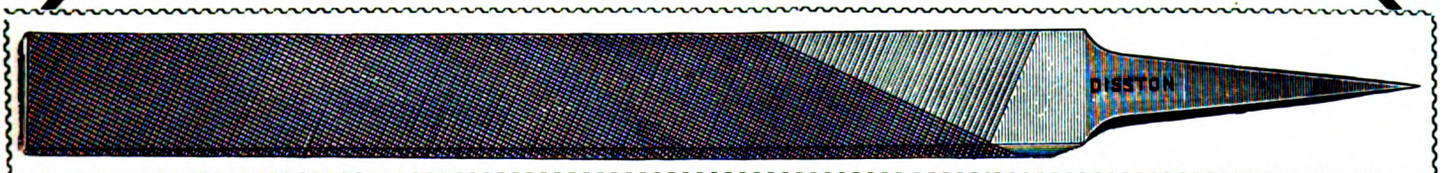
"VIM"
CHAMPION
DISSTON'S
Special High-Grade Saw.



TAPER GROUND.

The above cut represents the principle upon which our Cross-cut saws are ground, the figures indicating thickness in gauges. This method of grinding guarantees a true taper from tooth edge to back of saw, and the evenness of gauge will be retained, as saw wears narrow, having the necessary clearance, preventing the saw from buckling from an end thrust.

We can furnish toothed to the end, and 12 x 17 gauge for the Pacific coast trade.

SUPERIOR FILES.

Manufactured from Crucible Steel.
Cut by Skilled Mechanics upon

BLUE FLAME OIL STOVES

LEADERS FOR 1898.

For durability and simplicity our Blue Flame Wick and Wickless Stoves are absolutely the best in the market. They are made in seven different styles, convenient in construction, simple in operation, durable and economical. Made with a double feed; German Silver points; no rusting or clogging; with valve stop and regulator; heavy brass chimneys. Made for service and not for show. A stove for the people.

Our line of Gasoline Vapor and Evaporating Stoves, Gas Stoves and Ranges, for quality, style and price, stand to day unequalled. Our stoves and ranges have been in use for the last twenty years in more than five hundred thousand families, who bear willing testimony to their labor-saving, economical and absolutely safety construction.

For Further Information and Particulars, Send for Cata'ogue.

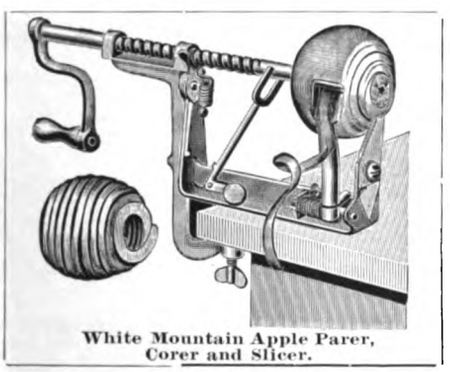
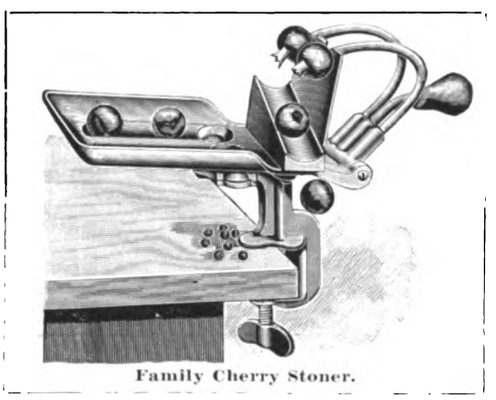
GRANITE STATE CUTLERY WORKS.



HARDWARE DEALERS

who want their dollar to buy just as much as any other man's dollar should read this, and fail not when ordering to specify "Made by Goodell Company."

We have had an experience of more than a quarter of a century in making cutlery. Our machinery and our methods are up to date, and we believe we can, with due modesty, say that we know how to produce results in the quickest, cheapest and best manner. We have abundant capital, which enables all purchases of stock to be made at rock-bottom prices. We use water power, which costs practically nothing. We can ship by freight to nearly all points North, South and West at same rates as would apply from New York or Boston.



Eureka Power Parers.

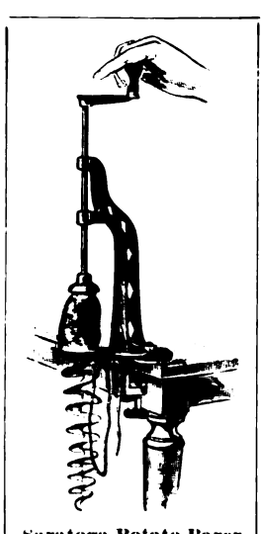
White Mountain Apple Parer, Corer and Slicer.

Our line includes everything needed in any ordinary Hardware stock, and consists of Knives and Forks, Carvers, Butcher Knives and Steels, Boning, Sticking, Skinning and Hunting Knives, Butter Spades, Cheese Knives, Bread, Putty, Scraping, Cigar, Kitchen, and Shoe Knives; all of which are fully warranted.

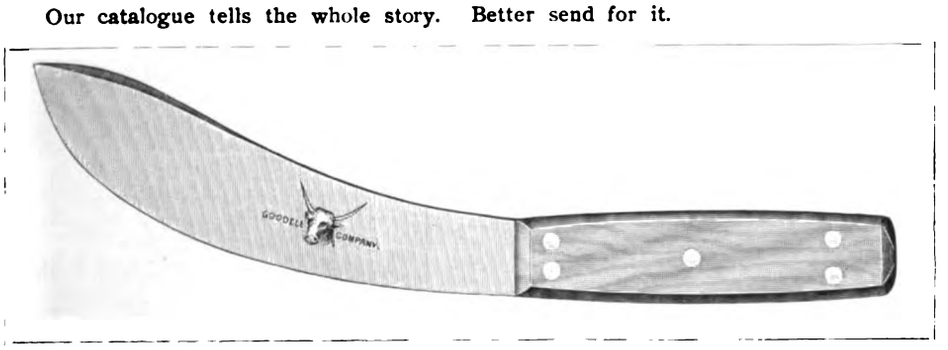
Our new cutlery catalogue is in the hands of the printer, and will soon be ready for distribution, free to any dealer who asks for it.

We are pioneers in the Apple Parer business, having been engaged in their manufacture continuously since 1864. We make a greater variety in this line than any competitor, and more than all others combined. We have machines to pare, to pare and core, and to pare, core and slice, for hand use and for power, ranging in price from fifty cents to twenty dollars each.

Family Cherry Stoner.



There is not, never was, and never will be any other Cherry Stoner that stones cherries like the Family Cherry Stoner. All other so-called cherry stoners mash the fruit and waste the juice. This one removes nothing but the stone. It is one of the few things that was made just right, and when a thing is right, it can't be beat.



Cahoon Seed Sower.

For more than thirty years the Cahoon Seed Sower has been recognized as the standard machine for sowing all kinds of grain and grass seed broadcast. It easily holds first place to-day. It is a profitable machine to sell, and a profitable machine to use.

We also make Potato Parers, and other useful labor-saving articles which should be in every first class stock of Hardware.

Our catalogue tells the whole story. Better send for it.

Saratoga Potato Parer and Slicer.

"HIGH TIME."

It is "high time" to come to a decision on the Freezer question for 1898. Here's the point—whether you will sell the leading Freezer on the market, or allow some other dealer to reap the profits and secure a reputation by selling

WHITE MOUNTAIN FREEZERS.

They are just as staple as iron or sugar, and a good deal more profitable to sell. Your customers want and will have them.

The question is, will you supply this demand or lose these sales, and very possibly permanent customers, by allowing them to go elsewhere for what they **will buy somewhere?** It is a time-tested proverb that the dealer who sells the best goods secures and holds the best customers. Don't experiment—don't hesitate. Action alone counts.

Write your Jobber to-day for prices and information regarding WHITE MOUNTAIN FREEZERS. . . .

A GOOD THING.

IT'S IN THE TEETH.

The Patent "REFORM" Curry Comb is composed of three shallow, oval trays, with corrugated edges. The parts are struck up from a fine grade of cold rolled steel, heavily tinned and bronze lacquered, firmly riveted together and warranted not to rust. The outer dimensions are 6½x4¼ inches and by reason of the large cleaning surface and peculiar arrangement of teeth, the comb will do its work with a large saving of time and labor, cleaning with equal thoroughness both long and short coats. There are no places to accumulate hair and it will not tear or injure the brush, the comb being quickly freed from accumulation by giving its face a gentle tap.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

A Hardware Association Number.

The Hardware Associations of the United States have reached a point in numbers, size and influence to warrant something more than the casual mention which they receive, from time to time, in the journals devoted to that particular branch of industry which they represent.

With this number, *Hardware* has reached its eighth anniversary, and the thought has occurred to us that this event could not be celebrated in a more fitting manner than by the publication of a special issue devoted to the history and present condition of these great organizations, the majority of which have come into being since the publication of our initial number of April 10, 1890. We are glad to remember in this connection, that *Hardware* has, during all these years, done everything within its power for the creation and extension of these organizations, and for the cultivation of that feeling of harmony and good will among the members of the trade, which constitutes the great foundation stone upon which they have all been reared.

The announcement made in our issue of February 10th, that a number of this character was contemplated, was received by the trade everywhere with expressions of approbation and cordial good will. The idea received the personal and official endorsement of the trade everywhere, especially from those who have been most efficient in the formation of these various organizations, and into whose hands their interests have been officially committed. This spirit of co-operation and cordial good will has been emphasized in all directions by the preparation, at the hands of these officials, of the many histories of the Associations found in the pages that follow. These have been supplemented by articles from the presidents of the various Associations, in answer to the question: "What has your Association done for the moral, social and business interests of the Hardware trade in the section which it especially represents?" We have also received letters from a number of leading Hardwaremen in answer to the question: "Do you believe in Hardware Associations, and *Why?*"

It is unnecessary to ask the trade to carefully examine the various pages of valuable and interesting matter of which this number is composed. Taken collectively, these articles form a compact and authentic history of the movement which has become so universal in the trade during the past decade; which we are certain will extend and broaden in character and possibilities for good as the years go by. This makes of this number a record which every Hardwareman who is interested in the good of the trade to which he belongs, should carefully preserve for future reference. We feel, with all the results now before us, that the care, labor and money, which have been expended in the preparation of this number, have been well spent for the general good; and if the trade will accept this tribute in the spirit of good will in which it is offered, we shall feel doubly repaid for the effort out of which it has originated.

A word as to the size, character and finish of this number may be pardoned under the circumstances. We do not believe that a finer illustration of the capacity for artistic enterprise to be found in the way of trade journalism, could be furnished than that shown in this present birthday number of *Hardware*.

We wish to cordially acknowledge the great assistance which has been given us by our friends in all directions, in the making of this number. This includes all the officials and other gentlemen who have kindly furnished us with information asked for; the manufacturers, jobbers and dealers, who have aided us in the preparation of this number by the special advertising which has been generously given us; and to the entire Hardware trade, wherever found, who are to be counted among the readers of this number. It is our purpose in the future, as in the past, to do everything in our power to aid in the creation and upbuilding of these associations. No call in this direction has ever been made upon our time or space, without such willing and earnest response as it was within our power to give; and we hope that this may be said with greater force in the future, than has been possible in the past.

Digitized by Google

A Hardware Association Number of "Hardware."

[The subjoined article from our issue of Feb. 10, 1898, is reproduced, as it shows the purpose had in mind in the publication of this special issue.]

On April 10th, 1898, *Hardware* will celebrate the eighth anniversary of its birth.

That there was a large and profitable field awaiting development by a first class Hardware journal, that should devote itself exclusively to the Hardware trade, has been demonstrated by the success which has crowned the efforts of *Hardware* from the initial number.

Despite the fact that recent years have not presented such conditions of prosperity as we all could have wished, *Hardware* has developed and extended its circulation and influence, until to-day it is read and quoted in every quarter of the land, and is a welcome visitor to the commercial marts of the entire globe. It was the purpose of those who founded the journal, and is still the high aim of those to whose hands it is yet entrusted, to keep it upon the highest possible plane of trade journalism; to make it clean, respectable and useful; to see that it properly represents the great Hardware interests of this country; that it gives the news, and all the news, and advocates such measures as best represent the great interests of which it is an exponent. That it has succeeded in a large measure in fulfilling these conditions is evidenced by its success, and the loyal support which it has secured at the hands of the trade everywhere—manufacturers, jobbers, retailers and every other line of labor which is in any way, directly or indirectly, connected with the Hardware trade.

We take occasion at this moment to extend the most earnest thanks of *Hardware* to all who have in the busy eight years past, assisted it in the accomplishment of this purpose.

Hardware has certainly used its best effort for the promotion of neighborly friendship and good fellowship among the members of the trade. It has given freely of its space for the dissemination of news in regard to the great Hardware organizations which, since 1890, have become so grand a force for good in the Hardware world. It has by its voice, encouraged in every possible way the creation of organizations having for their purpose the bettering of trade conditions, and has been an enthusiastic supporter of every movement having for its purpose the good of the trade.

It occurred to us that the celebration of our anniversary of April 10, 1898, could be made of signal usefulness to the trade everywhere, by the publication of a SPECIAL HARDWARE ASSOCIATION number.

It is our purpose, therefore, with that issue, to present a mass of valuable information in regard to the beginning and growth of the great forces or organizations which have accomplished so much in the way of acquaintance, better business methods, and the cultivation of fraternal regard. These sketches of the rise and growth of the organizations will be accompanied by portraits of various officers of the same, special articles from the pen of men who have been instrumental in the founding of these societies, and much else of interest in connection therewith. We feel that the time has come when the various steps which led to the creation of these forces within the Hardware trade should be gathered and properly placed upon record, and more especially as the information can now be secured at first hands, from those who assisted in this work.

We ask the hearty co-operation of Hardwaremen everywhere in this laudable effort, and our experience of the past leads us to firmly believe that the same will be given with a generous willingness which shall be very effective in its results.

The Lamp of Experience.

No one interested in the Hardware trade can read the various communications which appear in this issue, from the pens of those men competent to speak, without being thoroughly converted to the opinion that association among the members of the trade, and combination for social and business interests, pay one hundred cents on the dollar.

It is interesting to note the various steps by which these several organizations came into being. The secretaries have, in several instances, taken note of the fact that in the beginning there was distrust and mistrust among the members of the trade, which had to be overcome before organization could be regarded as of practical effect. It is also surprising to note how suddenly and thoroughly each suspicious dealer became convinced that his opponent was a pretty good fellow after all, when once the barriers of business reserve had been broken down, and the two came together, in friendly social relations. It is quite difficult to feel coldly and suspiciously toward a neighbor after one has broken bread with him, and sat with his feet under that neighbor's table. In one sense, these annual dinners, and stated association meetings, have made of each member a host, entertaining the rest of the trade; and out of each gathering has grown a more distinctly friendly feeling, and a closer harmony of interest, than the majority of Hardware merchants and manufacturers of the country, could have thought possible in the beginning.

Those States and localities in which organizations have not yet been effected, can learn much by reading of the preliminary steps in such States and localities as already possess successful and efficient working Hardware Associations. The labors and successes of those who have succeeded in creating and maintaining an efficient organization, belong, by the right of heritage, to those who have yet to travel in the same direction. We believe that the movement toward organization has by no means reached its culmination, but that it will continue until every State in the Union, and perhaps every large city, has an organization of its own.

Digitized by Google

COMMENDING OUR SPECIAL EDITION.

PRESIDENT HARDWARE CLUB OF NEW YORK.

Editor Hardware: I have read with no little interest your editorial of February 10, 1898, in which you state that on the eighth anniversary of *Hardware*, in your edition of April 10, 1898, you intend to publish a special number devoted to the Hardware Associations of America.

While congratulating you upon the great success of your paper, and believing that the value of such a publication to the trade, not only in this country, but throughout the world, cannot be estimated, I wish to commend you specially for your decision to publish the special edition above noted.

No one can understand, who has not thoroughly studied the question, the great amount of good which has been done to the Hardware trade, and to the business world generally, by the formation of the various Hardware Associations which are now found in almost every State in the Union, many of which are national in their character, and nearly all of which have been established during the eight years which have elapsed since the beginning of your journal.

It seems to me an appropriate time to gather up the points of history connected with these various associations, and to place the same upon record. Personally and officially, I shall be pleased to assist you in all possible ways in the carrying of this excellent project into execution.

Yours very truly,

PETER MCCARTEE,
President Hardware Club of New York.

New York, Feb. 14 1898.

PRES'T MERCHANTS' & MANUFACTURERS' ASSO. OF PHILADELPHIA.

Editor Hardware: It gives me great pleasure to learn that *Hardware* is to celebrate its eighth anniversary, especially as I have watched its growth from the very start, and have done so with considerable interest, as I have al ways found it a bright, newsy paper, and one which has probably been a benefit to the trade in general.

I understand that it is your purpose on April 10th to issue a special edition devoted to the Hardware Associations of the United States, and as, as far as I know, these associations have never been treated as a whole, we think that a presentation of the subject in this way would be of considerable interest, and will be very happy to aid you as far as is in my power—particularly in view of the fact that I believe our Philadelphia Hardware Jobbers' Association to be the oldest in the country.

With congratulations on your anniversary, and best wishes for your future prospects, I am,

Respectfully yours,

Philadelphia, Feb. 12, 1898. JAMES H. RITTER.

NEW ENGLAND HARDWARE DEALERS' ASSON.

Editor Hardware: I have read your editorial in the issue of February 10th, and it meets with my hearty approval. It seems to me that your paper can do no better work than to encourage in every way the Associations which were formed, and are forming so rapidly in the several States. The New England Hardware Dealers' Association, organized March 15, 1893, remember with pleasure your efforts in their interests. While our Association is flourishing, and we believe that the association of its members with each other has done much toward mitigating the evils attendant upon close competition, we still need the influence of the press, and especially of our Hardware papers, to extend the knowledge of the Association and its doings. I would like to take this occasion to say that in my opinion any National Association should be, in fact, as well as in name, broad enough to include representation from every association in the United States. I took occasion to state my views on this subject at the forming of a National Association in Chicago, at the time of the World's Fair, as I did not think that Association was broad enough in its scope, and it seems to me that the present National Association is hardly able to take in every association in existence. We would say that the New England Hardware Dealers' Association includes in its active membership both jobbers and retailers, and you will know that the distinction between these two classes in a great many cases is very fine.

Trusting that the issue in question will accomplish the results for which you are seeking, and that *Hardware* may have a prosperous new year, I am,

Yours truly,

D. FLETCHER BARBER,
President.

Boston, Mass., Feb. 12, 1898.

NEW ENGLAND IRON & HARDWARE ASSOCIATION

Editor Hardware: It is with much pleasure that I learn of your intention to celebrate your anniversary with a "Special Hardware Association number."

It has been proved beyond doubt that intelligent and brotherly co-operation, as exemplified in national, state and city organizations, have produced wonderful results during the depressed conditions of the past four years. The support and endorsement accorded through your columns is fully appreciated.

May long years of activity and prosperity be your reward. Very sincerely yours,

L. C. CARTER,
President.

Boston, Mass., Feb. 15, 1898.

SECRETARY OHIO HARDWARE ASSOCIATION.

Editor Hardware: I am greatly pleased to notice by your editorial in the HARDWARE of February 10 that you contemplate a special Hardware Association number in the near future.

As one who is now and has been deeply interested in the welfare of the Ohio Hardware Association, I hasten to express my hearty approval of this project.

This is an age of organization. The intelligent, progressive, active Hardware dealers are found in these associations, in order that they may avail themselves of advanced business ideas and methods. Such a number of HARDWARE must surely be of great benefit to both State and local organizations, and also in an indirect way to the dealer. Respectfully,

JOHN F. BAKER,
Secretary Ohio Hardware Association.

Dayton, Ohio, Feb. 16 1898

PRES'T MINNESOTA RETAIL HARDWARE ASSOCN

Editor Hardware: I read with much interest your editorial in *Hardware* of the 10th inst., and your idea of making the anniversary edition of the same, one devoted to Hardware Associations, is a good one. The retail Hardware trade throughout the United States is suffering from many evils which could be alleviated through organized effort, and a full discussion of these evils and their remedies, through the medium of trade papers, would assist in the

943573

Digitized by Google

formation of such organizations when they do not already exist and would aid those already formed.

Any information or assistance we can render you in this work will be cheerfully given.

Respectfully,

St. Cloud, Minn., February 18, 1898. CHAS. F. LADNER.

PRESIDENT MICHIGAN HARDWARE ASSOCIATION.

Editor Hardware: I am very glad to learn that you will devote your anniversary number, April 10, especially to the history and interests of the Hardware Associations of America. This is a splendid idea. The vast amount of capital invested by very many of the most progressive, enterprising and intelligent citizens of this country in the Hardware business is entitled to the favorable recognition and encouragement of your valuable paper, and no doubt will be read in every quarter of the land.

As you are thoroughly familiar with the organization and progress of the Michigan Hardware Association, I will not encroach very much on your good nature or valuable time, only to say that the future of the Michigan Hardware Association looks brighter than ever, and no doubt we will have the largest representation at our next annual meeting in July at Detroit that we have ever had.

I am now preparing a route and list of names of dealers in all the larger cities in the State, on whom I shall personally call during the month of March, and endeavor to explain the objects and advantages of the Association to them and solicit additional memberships.

I cannot understand why so many of the wide-awake dealers in Michigan and other States have not identified themselves and taken an interest in the State Associations, but have no doubt very many will do so, when the benefits to be derived by membership in State Associations are better understood, and I hope will eventually lead to the organization of a National Retail Hardware Dealers' Association.

Wishing your valuable paper HARDWARE continued success and prosperity, which you so much deserve, I am,

Yours truly, CHAS. F. BOCK,
President Michigan Hardware Association

Battle Creek, Mich., Feb. 17, 1898.

Cleveland Hardware Association.

The Cleveland Hardware Association, Cleveland, Ohio, was organized in 1886. Its object was to become better acquainted, to discuss methods of doing business and cultivate friendly relations with manufacturers. George Deming, of the Geo. Worthington Co., was the first president; Henry Blossom, of the W. Bingham Co , the second, and C. B. Lockwood, of the Lockwood-Taylor Hardware Co., the third. B. L. Pennington was the first secretary. W. H. Coles, of the McIntosh-Huntington Co., succeeded him.

It was not organized for the purpose of agreeing upon prices. It has done much to make business life pleasant by showing that competitors are not necessarily enemies.

A Baltimore Association.

The Association known as the Hardware & Iron Dealers Association of Baltimore City, Md , organized early in 1898, is not a general Hardware organization, but consists of several dealers who sell horse shoers' supplies. They have come together for the protection of their mutual interests. The present officers are: President, Jacob Wolf; vice-president, Louis Schaefer; secretary, W. Wyeth; treasurer, E. Scott Payne.

Conductor (irritably)—"Well, say, why didn't you take the car right behind us? It isn't half full. What made you insist on climbing into this crowded motor?"

The passenger (more cheerfully).—"It's the old excuse, my friend, I didn't know it was loaded."—*Exchange.*

Northwestern Retail Hardware Association.

This organization, representing the great Northwest, may be said to have come into being on the organization of the Minnesota Retail Hardware Association. It is made up to cover the States of Minnesota, Wisconsin and North Dakota. The first meeting was held on February 10, 1898, and the following executive committee elected: Charles F. Ladner, Minnesota Association; C. A. Peck, Wisconsin Association; Clark W. Kelley, Dakota Association. J W. Clark is secretary, with headquarters in the Boston block, Minneapolis. The membership of this Northwestern Association comprises 650, and all the States represented are working together in unison. Each Association is represented in executive session by the president, or any member of the local Association that the president may appoint. The expense incurred by the executive board is borne jointly by these local State Associations, in proportion to their per capita membership. The following resolutions explain in full the object of this Association, and the work it has set itself to do:

Resolved, That the members of this Association confine their purchases of Hardware, stoves and tinware to manufecturers and wholesale dealers who sell goods only to firms that are regularly engaged in the retail Hardware business as defined in these resolutions.

Resolved, That it is the sense of this Association that the interpretation of the term "retail Hardware dealers" as set forth in the above resolutions, to entitle him to purchase Hardware, stoves and tinware, be construed to mean any person having an established place of business and carrying a line of Hardware, Stoves and Tinware and such other goods as are usually kept in a first-class Hardware store, and in cities of less than 5,000 population, all persons carrying a general line of Hardware in connection with any other kind of merchandise.

Resolved, That it is not the intention of the above resolution to prevent the interchange of goods mentioned between manufacturers and wholesale dealers in such goods, or for the export trade, and the interpretation of said resolution is hereby vested in the Executive Committee with power. The following are exempt from these resolutions: The United States Government, State county and city institutions, railroads, gas, water and electric light companies and such other manufacturing industries and companies as the Executive Committee may approve, for such goods as are necessary in their respective lines of business.

Resolved, That any manufacturer or jobber in Hardware, Stoves and Tinware furnishing net prices, or any discount from list prices, contrary to the foregoing resolutions, either by themselves, employees or agents, shall be considered as disapproving the above resolutions.

Resolved, That this Association shall, so far as lies in its power, keep a record of all goods sold, and by whom sold, to catalogue houses and department stores and of all other violations of these resolutions.

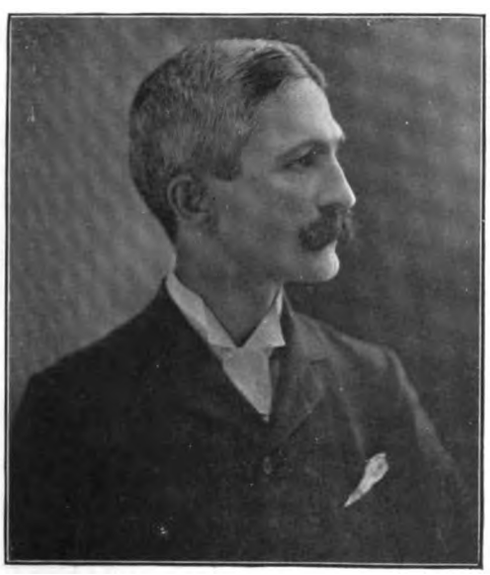
Resolved, That any member purchasing goods from any manufacturer or jobber who has been listed by the Executive Board as disapproving of these resolutions shall be subject to a fine or expulsion at the discretion of said Executive Board.

Resolved, That every member of this Association is constituted a committee of one, and is expected to report to the proper officers of his local State Association any violation of these resolutions.

Resolved, That it is the duty of the president of the local State organizations to report to the executive officers of the Northwestern Association any violation in his State of these resolutions.

Resolved, That the secretary of the local State organization furnish the secretary of the Northwestern Association with a list of the members of his State Association, with corrections from time to time as changes may take place in the membership.

Resolved, That these measures are just and necessary for our welfare, and a rigid enforcement is demanded.



Resolved, That we urge our officers to use their best endeavors to bring about the formation of local State organizations in adjoining States not now organized, and upon application admit them to membership in this Association on terms and conditions heretofore set forth in these resolutions, with the end in view that a uniform system of protection for the trade will prevail throughout the entire Northwest.

THE OHIO HARDWARE ASSOCIATION.

Editor Hardware: Some time during the month of September, 1894, a number of prominent Hardware dealers in our State received a brief letter from Theodore Butler, president of the Standard Hardware Co., of Akron, Ohio, asking their opinion as to the formation of a State retail Hardware Association. In this letter Mr. Butler expressed the thought that the time had arrived for such an organization, and briefly outlined his ideas, asking those who were in accord to meet him at Columbus, October 10, 1894.

Thirteen firms were represented at this meeting. An organization was effected, and a constitution and by-laws adopted. After the committee on resolutions had made its report, which was confirmed, it was unanimously agreed among those present to use their best efforts to build up an

H. C. WISEMAN, PRESIDENT OHIO HARDWARE ASSOCIATION.

Association that would be a power for good to the retail dealers of Ohio.

At this meeting the following were elected the officers:

President: T. J. Morris, of Lima.

Vice-President: F. M. Bashore, of Paulding.

Secretary: Theodore Butler, Akron.

Executive Committee: J. H. Kauke, Van Wert; Fred Haberman, Marion

It was also decided at that meeting that an invitation should be mailed to the Hardware dealers in the State, asking them to attend a meeting, to be held in Columbus, at the Neil House, February 13, 1895. Notwithstanding the fact that this notice was sent broadcast throughout the State, only sixteen dealers were present. Of this number, there were nine members who were not present at the first preliminary meeting. Quite a number of letters were received from dealers, expressing themselves as being in harmony with the meeting and its objects, but stating their inability to be present. After an address of some length by President Morris, the afternoon was spent in mutual exchange of ideas, followed by the re-election of the officers of the Association.

When the hour for supper arrived, it was decided to meet together in the ordinary of the hotel, and covers were laid for sixteen guests. Three of the number, however, being unable to be present, only thirteen persons responded. Lest any of your readers may be of a superstitious turn of mind, the writer will quiet their fears by saying that none of the thirteen who sat at the table died during the year, thus setting at variance the prevalent idea that one of thirteen in a company must die within the twelve months following. The supper was one of the pleasantest events of the session, and cemented closely together those who were present. After the supper the exchange of business views continued until a late hour, and at its conclusion it was agreed by those present that they would remain in the Association as long as it existed, and I am pleased to say that those who were present have remained in the Association, and are active members of it to this day.

The next session was held at Dayton, when the secretary's report disclosed the fact that the Association had grown to thirty-six members. At this meeting there were some changes made in the officers and directory, as follows:

President: J. P. Duffey, Greenville.

Vice-President: Mell B. Talmage, Mt. Gilead.

Secretary: John F. Baker, Dayton.

Executive Committee: Theodore Butler, Akron, and F. F. Scott, Urbana.

The session was productive of much good, and those present were delighted with the time spent at Dayton. The local dealers in the city were very hospitable, and did much in their power to make the session a pleasant one.

The next session was held at Columbus, February 24, 1896, and it was then found that the Association had grown, there being at this time about sixty members. At this session there was no change made in the management of the Association, the officers being unanimously re-elected for another year. The session was a profitable one, the questions that were discussed being of great importance to all who were present.

Columbus, by reason of its central location, was again chosen as the place of meeting for 1898, and on February 23rd of this year the Association met to hold its fourth annual session. This meeting proved the best of all. If there were any who by reason of the slow growth of the Association feared that it would not succeed, their fears were dispelled. The Association now numbered 100. As the members came together it was evident that all who had entered the Association at its inception were not only faithful by their presence, but earnest in their zeal for the best interests of the society, and those who were seen for the first time were found to be of that class of dealers, who, by their fidelity to and activity in business, come from the front ranks of trade. It was a meeting never to be forgotten. Our Association had grown slowly, but it was growing solidly. To use the words of one who had been with us from the beginning, "*The Ohio Hardware Association has come to stay!*"

One of the interesting events at this session was the question drawer. The time devoted to this part of our programme in discussing questions of business, new ideas, old and new methods, was found to be entirely too short, although the entire morning session was occupied. It is safe to say that this will be the most prominent part of our programme at the next annual meeting. At this session the following were elected as the officers:

President: H. C. Wiseman, Springfield.

Vice-President: E. L. Harris, Columbus.

Secretary and Treasurer: John F. Baker, Dayton.

Executive Committee: W. A. Remy, Mansfield; Frank Harrison, Toledo; O. M. Scott, Marysville; Geo. M. Gray,

Digitized by Google

Coshocton; L. F. Stahler, Waverly; W. P. Scott, McConnellsville; C. C. Fouts, Middletown.

Should you ask to whom is the Association indebted for its success, we must reply: To no one in particular, but on the contrary to all its members All are loyal, as the many letters to the secretary from its members will testify, and these letters are coming to him at all times during the year.

Our Association has not grown so rapidly as some of our sister Associations, but it has had a steady and sure growth. The members are those who are counted among their fellow-tradesmen as active, progressive and aggressive merchants, and hence our Association must be successful.

The benefits that come to us are many. The interchange of ideas, consideration of business plans and methods, and the educating influences that result from these organizations, must surely be mutually beneficial.

Finally, one of the pleasantest features is the fraternal feeling that exists among our members. This has characterized all our meetings, and we now look forward with

JOHN F. BAKER, SECRETARY OHIO HARDWARE ASSOCIATION.

pleasant anticipations to the next annual session, which is to be held in Toledo, February 22, 1899

Respectfully,

JOHN F. BAKER,

Dayton, Ohio. Secretary Ohio Hardware Association

Texas Hardware Jobbers Association.

Editor Hardware: Complying with your request, I beg to give you below a synopsis of the Texas Hardware Jobbers' Association.

The causes which led to the formation of this body were prompted by a feeling of necessity. The question of organization was first taken up by R. E. Bell, of this place, with the different jobbers in the State, the result of which was, that he called a meeting August 20, 1896, to be held in Dallas, Texas, September 10, 1896, for the purpose of discussing the advisability of organizing an association. The following firms were represented at the meeting:

Wm. Henry & Co., Fort Worth, by J. B. Burnsides.
F. A. Heitman & Co., Houston, by F. W. Heitman.
Krakauer, Zork & Moye, San Antonio, by A Krakauer.
Breustedt Hardware Co., Waco, by Robert Eikel.
Berings & Cortes Hardware Co., Houston, by Mr. Cortes.
Daglash Hardware Co., Tyler, by J. J. Daglash.
Moroney Hardware Co., Dallas, by James Moroney.
Huey & Philp Hardware Co., Dallas, by S. Philp.
R. E. Bell, Weatherford, by Robert F. Bell.

They found it advisable to go into permanent organization, so adjournment was taken until October 22, 1896, at Dallas, Texas, for the purpose of permanent organization. The following firms were represented as shown:

H. S Bettes Hardware Co., Paris, by H. S. Bettes.
Berings & Cortes Hardware Co., Houston, by J. C. Berings.
Huey & Philp Hardware Co., Dallas, by { S. Philp. / A Kelly.
R. E Bell, Weatherford, by R. F. Bell.
Krakauer, Zork & Moye, San Antonio, by A Krakauer.
Deutz Bros., Laredo, by Henry Deutz.
F. A. Heitman & Co., Houston, by F A. Heitman.
Nash Hardware Co., Fort Worth, by Chas. Nash.
Wm. Henry & Co., Fort Worth, by J. B. Burnsides.
McLenden & Duncan, Waco, by A. P. Duncan.
Breustedt Hardware Co., Waco, by Robert Eikel.
Roberts, Hardwick & Taylor, Sherman, by W. L Sandford.
Hurlbut Hardware Co., Brownwood, by J. I. Clingman.
Daglash Hardware Co., Tyler, by J. J. Daglash.
Moroney Hardware Co., Dallas, by James Moroney.

The above firms comprise the original members of the Association. The officers elected at that meeting were as follows:

President: James Moroney, Dallas.
1st Vice-President: F. A. Heitman, Houston.
2d Vice-President: Henry Deutz, Laredo.
Secretary and Treasurer: R. F. Bell, Weatherford.
Executive Committee: A. P. Duncan, Waco; W. L Sandford, Sherman; Chas. Nash, Fort Worth.

The next meeting was held in Houston, April 21, 1897, and the old officers were re-elected at this meeting. The membership of the Association comprises the following firms:

Hurlbut Hardware Co., Brownwood.
Huey & Philp Hardware Co., Dallas.
Moroney Hardware Co., Dallas.
John Steffian & Co., El Paso.
Nash Hardware Co., Fort Worth.
Wm. Henry & Co., Fort Worth.
Berings & Cortes Hardware Co., Houston.
F. A. Heitman & Co., Houston.
J. S. Dunlay Hardware Co., Houston.
Jos. F. Meyer Co., Houston.
Deutz Bros., Laredo.
H. S. Bettes Hardware Co., Paris.
Roberts, Hardwick & Taylor Co., Sherman.
Krakauer, Zork & Moye, San Antonio.
McLenden & Duncan, Waco.
Breustedt Hardware Co., Waco.
Ed. Strauss, Waco.
R. E. Bell, Weatherford.
Walter Tipps, Austin.

The territory comprises the whole State, and as will be noted by the above list, comprises almost every jobber of Hardware in the State.

The object of our Association is to promote the business interests of the Hardware jobber, and to establish a friendly feeling among its members.

The officers and members have taken a great interest in its work, and it is believed that no one of them regrets its creation. Yours very truly,

ROBT. F. BELL,

Secretary-Treasurer Texas Hardware Jobbers Association.

Weatherford, Texas.

The Hartford City Gas Light Co , Hartford, Conn., have placed another contract with the Berlin Iron Bridge Co., East Berlin, Conn , for one of their steel roofs lined with their patent anti condensation fireproof roof lining, which has given the Gas Light Co. such eminent satisfaction in the past. The new building is about 35 feet wide and 70 feet long, having brick sides and iron roof constructed as mentioned above.

HARDWARE'S "Prices Current" are reliable.

PACIFIC COAST HARDWARE ASSOCIATION.

Editor Hardware: In response to your letter of the 8th inst., I beg to submit the following brief history of the Pacific Coast Hardware & Metal Association, for insertion in your Special Hardware Association Number:

The Pacific Coast Hardware & Metal Association was formally organized in June, 1896, and the geographical territory covered embraces California, Oregon and Washington.

Its organization was primarily brought about because of certain local conditions which had grown onerous and burdensome, and to the remedying of which a few active spirits in the Hardware and metal lines lent their aid. In a secondary sense, we are in a measure indebted to the National Hardware Association, in that some of the prime movers in the organization of our association were members of the national body, and because of the light which they had received had awakened to a realizing sense of the benefits that would accrue by associating in one compact body the Hardware and metal jobbers of the Pacific Coast.

Messrs B. F. Dunham and Brace Hayden of the Dunham, Carrigan Hayden & Co.; Wakefield Baker and A. C. Rulofson of Baker & Hamilton; Charles E. Miller and A. L. Scott of Miller, Sloss & Scott; John P. Merrill and W. R. Wheeler of Holbrook, Merrill & Stetson; A. A. Watkins of W. W. Montague & Co.; Geo. T. Hawley of Hawley Bros Hardware Co.; Chas. F. Tay of George H. Tay Co.; E. A. Selfridge and H. J. Morton of Geo. W. Gibbs Co.; H. T. Lally of Crane Co.; A. A. Wigmore of John Wigmore & Sons Co.; Frank L. Brown of Washburn & Moen Mfg. Co, San Francisco; William Schaw of Schaw, Ingram, Batcher & Co., Sacramento, C. C. Reynolds of Harper & Reynolds Co, George Boole of Union Hardware & Metal Co., both of Los Angeles, Cal; and William Honeyman of Honeyman, De Hart & Co., of Portland, Ore., were the pioneers in the movement and active participants in effecting our organization, all working assiduously to perfect and shape our common ends.

The first convention of our Association was held in the city of San Francisco, on Thursday June 18, 1896, in the rooms of the Board of Trade, and continued three days. At this gathering the permanent organization was effected, matters largely of local importance were discussed, and the reformation of certain local conditions which seriously handicapped our members, such as extended credits, enforcement of interest charge on overdue bills, inauguration of charge for casing and cartage, and the adoption of a policy towards manufacturers and their agents who trespassed upon the jobber's rights by indiscriminate quoting of prices.

A most happy and fraternal spirit pervaded the assemblage, and resulted in creating a very cordial understanding, which ultimately developed into the powerful organization now in existence.

Eight months later, during February, 1897, our Association again met in the city of Los Angeles, and the enthusiasm and earnest work which characterized the first convention had increased manifold and was in marked evidence on all sides. The report of the president, secretary and standing committees made manifest the fact that our undertaking had not been in vain.

Later in the year, during the month of June, we held our third convention in the city of Portland, Ore. At this gathering, as elsewhere, the utmost enthusiasm prevailed, and marked the proceedings. T. James Fernley, secretary-treasurer of the National Hardware Association, by courtesy of the National Association, was present and entertained and edified those present with an exposition of the most modern methods of doing business in the Eastern section of the United States.

Our next convention will be held in San Francisco on the 8th, 9th and 10th of June of the present year.

Our first president was B. F. Dunham, late president of the Dunham, Carrigan & Hayden Co. of this city. Mr. Dunham, who died in November last mourned by a legion of friends, was the unanimous choice of our members for presiding officer, and on the expiration of his first term of office, was unanimously re-elected to succeed himself. During his incumbency of the president's office for the second term, he was stricken down, leaving a gap in our ranks hard to fill.

Mr. Dunham's successor is Brace Hayden, his life-long partner and associate in business, and who also now officiates as the president of the Dunham, Carrigan & Hayden Co.

Our present board of officers is as follows:

President: Brace Hayden, Dunham, Carrigan & Hayden Co., San Francisco.

First Vice-President: William Honeyman, Honeyman, De Hart & Co., Portland.

Second Vice-President: C. C. Reynolds, Harper & Reynolds Co., Los Angeles.

Third Vice-President: William Schaw, Schaw, Ingram & Batcher Co., Sacramento.

Treasurer: John F. Merrill, Holbrook, Merrill & Stetson, San Francisco.

Secretary: Frank L. Brown, Washburn & Moen Mfg. Co., San Francisco.

Assistant Secretary: W. C. McCloskey, San Francisco.

Executive Committee: William R. Wheeler, Holbrook, Merrill & Stetson, San Francisco; A. A. Watkins, W. W. Montague & Co., San Francisco; Wakefield Baker, Baker & Hamilton, San Francisco; H. J. Morton, Geo. W. Gibbs Co., San Francisco; A. L. Scott, Miller, Sloss & Scott, San Francisco; Chas. F. Tay, George H Tay Co., San Francisco; Alphonso A. Wigmore, John Wigmore & Sons Co., San Francisco.

Our total membership at present is 75, and our organization was never in a more flourishing condition.

We believe that our organization is somewhat larger in its scope than those of a kindred character in existence elsewhere in this country. Experience has taught us that there is a large field of usefulness without and beyond the ordinary narrow channel of our own lines. As an instance of what we have striven to do, it may be said that we have sought, and are still seeking, with gratifying success, to advertise the resources and advantages of our section of the country through the medium of the traveling salesmen employed by our members. Literature treating of our work, and pregnant with suggestions and recommendations of value to the salesman, has been forwarded to all the travelers employed by members of our Association.

Regularly as the year rolls round, usually during the Christmas holidays, when all the travelers for the various houses are called in, our Association invites them as special guests to the banquet table, where are discussed the latest methods of doing business, the most approved mode of selling goods, the propriety of advertising the resources of the

Digitized by Google

Pacific Coast and of doing their utmost towards upbuilding the commercial interests of the extreme West. Thus we bring in closer touch the employer and employed, new friendships are formed, experiences related, valuable information imparted, and withal, these gatherings have been productive of much good.

We are endeavoring to infuse the same spirit which animates us into merchants in other lines, by assisting them in perfecting organizations of the same character as ours. Thus we hope to bring about a coalition of forces in the near future with a common end in view—the expansion and development of Pacific Coast interests.

W. C. McCloskey,
Assistant Secretary Pacific Coast Hardware & Metal Association.
San Francisco, Cal.

Hardware Merchants' & Manufacturers' Association of Philadelphia.

Editor Hardware: Our organization was formed on the 6th day of March, 1886. Its formation was really the outgrowth of a visit to one of the smaller cities of the State by several jobbers of Philadelphia, who were interested in a failure in that city.

These gentlemen were a committee appointed as a result of a meeting of the creditors, called by T. James Fernley, at his office in the spring of the year previous. Up to that time there had been no meeting of the jobbers of our city. In fact, many of them did not know each other, but when this failure occurred, Mr. Fernley brought together the Hardware jobbers who were creditors of the party involved, and a committee was appointed to protect their interests.

Two or three days were passed in each others' company, by these gentlemen, and the opinion was freely expressed that the meeting together would be advantageous.

Shortly after this, Samuel Disston entertained a large number of the jobbers of Philadelphia at his home, as well

JAMES H. RITTER, PREST. PHILADELPHIA ASSOCIATION.

as some of the manufacturers, and on this occasion the Hardware Merchants' & Manufacturers' Association came into existence.

The late William J. Lloyd was the first president. He was succeeded by Charles M. Biddle, of the Biddle Hardware Co. Some four years afterwards, and at the end of two years, which is the constitutional limit for the holding of office of president of our Association, he was succeeded by Fayette R. Plumb, who in turn was succeeded by William W. Supplee.

After Mr. Supplee had very successfully filled the office for two years, Samuel Disston was elected president, and in January last, Mr. Disston was succeeded by James H. Ritter, of the Biddle Hardware Co.

Our meetings are held monthly. One of the very strong features in holding the Association together has been the

HUGH McCAFFERY, VICE-PREST. PHILADELPHIA ASSOCIATION.

system of fining all those who did not attend the regular monthly meetings one dollar. This system was introduced by Charles M. Ghriskey, one of the oldest and best known Hardwaremen in Philadelphia, and as a result of this, we have always had a very full attendance at our monthly meetings, and in addition to this, we have had the pleasure of accumulating about $1,000 in fines.

During the administration of William W. Supplee, the privileges of the Association were extended to out-of-town manufacturers, so that we have a large list of non-resident members.

The Association occupies a very beautiful and commodious room in the Philadelphia Bourse, to which all the members have access.

In addition to the regular monthly meetings the Association frequently provides mid-day lunches, so that those who come together may have an opportunity of having an enjoyable time for an hour or so.

Our Association does not confine its operations to the fixing of prices, being more engaged in looking after the general welfare of the trade, than obtaining any specific advantages.

Respectfully,
James H. Ritter,
President Hardware Merchants' & Manufacturers' Association of Philadelphia.
Philadelphia, Pa.

One of the best ways to draw temper on a long, slender tool, like a stay-bolt tap, is to use a piece of gas pipe. Run the pipe through the fire, making the fire long enough to accommodate it, and put in your tap, turning it and watching, and you can get the nicest sort of heat. Some toolhardeners do their heating to harden in a pipe.—*Ironmongery.*

The clerk who gets into the kernel of the business will get the kernel of trade when he is in business for himself.

THE HARDWARE CLUB OF NEW YORK.

The history of the Hardware Club of New York is one unbroken record of success. This great organization came into being in response to a general demand from the trade, and as an expression of fraternal feeling so well emphasized in the Hardware dinner given at Sherry's, in the winter of 1892.

Active steps toward the formation of a club were taken by the committee charged with responsibility in connection with the above dinner, and a general meeting of representatives of the Hardware houses of New York was held in the parlors of the Cosmopolitan Hotel, on Chambers Street, on Saturday, March 19, 1892, in answer to the call as expressed below. Webster R. Walkley called the meeting to order, and on motion was elected chairman, while J. L. Varick was chosen to the position of secretary. Alfred D. Clinch was called upon to inform those present of the steps already taken by the committee. He stated that available places had been examined for club uses, and gave some details in connection therewith. A general discussion ensued, after which a resolution was offered by A. W. Milligan that those present proceed immediately to the formation of a Hardware Club, and that the details concerning the same be left for later consideration. The motion was carried unanimously. R. R. Williams suggested that the names of those present who were willing to become members, and to guarantee an initiation fee and dues of not more than $50 for the first year, be then taken down. This motion was carried, and the great majority of those present signed the above pledge, and before adjournment fifty-three such guarantees had been secured.

New York, March 15, 1892.

Dear Sir:

At a late Dinner of the Hardware and Metal Trades, it was the expressed wish of many present that, at an early day, a meeting should be called to discuss the advisability of forming a

HARDWARE CLUB or ASSOCIATION.

In accordance with such desire, you are requested to meet other members of the trade in the parlors of the Cosmopolitan Hotel, corner of Chambers Street, and West Broadway, on Saturday next, March 19th, at 2:30 p. m.

Please extend this invitation to any others interested in the matter.

Yours Truly,

W. R. WALKLEY,

Chairman of Committee of Arrangements.

An executive committee to consist of Webster R Walkley, J. L. Varick, Eugene Bissell, A. D. Clinch, W. H. Williams and Peter McCartee, were appointed to take entire charge of the matter of preparation as to securing rooms, the suggestion of a name, the adoption of a constitution, etc.

A later meeting was held at the same place on Saturday, March 26th, at which there was a full attendance of those interested in the movement. It was called to order by Chairman W. R. Walkley, with J. L. Varick as temporary secretary and temporary treasurer. A. D Clinch, chairman of the executive committee, submitted a report of progress. The committee having the matter in charge was enlarged by the addition of Robert C. Hopkins, H. C. Marshall and E. C. Van Glahn. On April 9th the executive committee presented a proposed constitution, which provided that the name of the club should be the Hardware Club of New York; that the management should be in the hands of a board of governors of fifteen members, that the annual meeting should be held on the third Saturday of March of each year; and that the club should consist of resident and non-resident members

At a meeting held on April 9th a committee was appointed to nominate a board of governors, and they reported at a further meeting on April 16th as follows: Brace Hayden, M. C. Ogden, Charles Daly, Thomas F. Keating, R. R. Williams, James H. Kennedy, R. H. Swayze, E. C. Van Glahn, A. G Sherman, W. R. Walkley, W. H. Williams, J. L. Varick, Peter McCartee, Eugene Bissell and A. D Clinch. These gentlemen were unanimously elected. A meeting of these governors was held on April 19th, and the following gentlemen were elected officers of the club: President, William H. Williams; vice-president, R. H. Swayze; treasurer, Thomas F. Keating; secretary, J. L. Varick.

A committee consisting of Messrs. McCartee, Clinch, Varick, Bissell, Walkley and W. H. Williams were appointed to investigate the question of location for the club headquarters, etc., and to report to the board at as early a date as possible.

Very little was done during the summer months except to secure the addition of names to the roll of membership. A meeting of the board of governors was held on September 8th, when the chair reported that the club had been incorporated in accordance with instructions, and explained what steps would be necessary to make the details of organization to conform the latter.

The special matter that came up for consideration was that concerning proposed club rooms in the new Postal Telegraph Building then going up on Broadway and Murray Street. A plan of the proposed floor in this building was submitted, and a couple of hours were spent in consideration thereof. The whole matter was then submitted to a committee who were to report at an early

Digitized by Google

meeting of the board, consisting of William H. Williams, Alfred D. Clinch and Thomas F. Keating.

It was decided by the board of governors to place the membership limit at 500 for resident members and 300 for non-resident members.

Early in December enough names had been added to the list of membership to make a total of 219, and the success of the club was therefore insured.

The Hardware dinner of 1893, which was the first of these notable gatherings to be held under the direct auspices of the Hardware Club, was very successfully given at Sherry's on the evening of February 21st, more than 300 gentlemen being present. William H. Williams, president of the club, presided in his official capacity, and the evening was a success in every sense of the word. As these dinners have since been given annually under the auspices of the club, with the exception of 1894, in which it was omitted because of the stringency of the times, no further mention of the same is necessary in connection with this brief history of the club, except to say that they have all been successful in the highest degree, and have served as potent factors in the direction of closer personal fellowship among the members of the trade.

PETER McCARTEE, PRESIDENT N. Y. HARDWARE CLUB.

The first annual meeting of the club was held on March 18, 1893, in the parlors of the Cosmopolitan Hotel. President W. H. Williams reported that the board of governors had entered into a contract with the Postal Telegraph Cable Co., for ten years for the top floor of the new building then being erected on Broadway and Murray Street. He added that it was expected the rooms would be ready for occupancy by November 1st, which hopeful prophecy, as later events showed, was called in for reconsideration and extension. Secretary J. L. Varick reported that there were at that date a total membership of 228 resident and 61 non-resident members, or a total of 289, "which," he added, "considering that we are as yet without any abiding place, we cannot but feel it a very satisfactory condition, and warrants taking upon ourselves the carrying out the proposed plans."

On recommendation of the nominating committee, the members of the board of governors, whose names are above given, were unanimously elected as successors to themselves. A resolution was offered by William A. Graham, and unanimously adopted, that "It is the sense of this meeting that the action of the board of governors in leasing from the Postal Telegraph Cable Co., rooms for the use of this club, as reported to this meeting by the president, meets with the approval of the members of this club."

It may be said in passing, that the gentlemen named above as members of the first board of governors of the Hardware Club of New York, have served continuously in this responsible position until the present date, with the exception that on the death of William H. Williams, George H. Sargent was elected in his stead; and that consequent on the removal of Brace Hayden to San Francisco, and the refusal of Charles Daly to allow the use of his name for re-election, in 1898, James D. Foot and George J. Laighton were elected as members of the board. The utmost harmony has always existed among the members of the board, and it is only uttering a truism to state that each gentleman has worked to his best ability for the general good of the club. Mr. Williams served as president until his untimely and lamented death on August 14, 1895, when Peter McCartee was chosen as his successor, and has since filled the same office by successive re-elections. R. H. Swayze served without interruption as vice-president of the club until 1898, when he positively declined to again serve, and George H. Sargent was elected in his stead. Thomas F. Keating, treasurer, has been re-elected from year to year; and J. L. Varick, secretary, had the honor of re-election from year to year until 1898, when he also declined a renomination, and James H. Kennedy was elected in his place.

The summer of 1893 was passed in patient waiting for the completion of the proposed club rooms. At the first fall meeting of the board, held on October 4th, the gratifying announcement was made that a total membership of 314 had been reached, which fact spoke volumes for the stability and character of the club, and for the patriotism of the members, who, as yet, were existing without a home, and living entirely upon hope and the promises of the future.

R. H SWAYZE, VICE-PRESIDENT N. Y. HARDWARE CLUB.

A special meeting of the club was held at the Cosmopolitan Hotel on December 22nd, the object of which was "to receive reports from the board of governors as to the

Digitized by Google

HOME OF THE HARDWARE CLUB OF NEW YORK.

Digitized by Google

progress of the club, and decide in regard to the furnishing of the rooms, and to consider such other matters as may be brought before the club." The attendance was very general. President Williams reported in full as to what had been done in regard to the leasing of the proposed club rooms, and the report of Treasurer Keating showed that the finances of the club were in a healthful and promising condition. Peter McCartee, chairman of the house committee, presented a report on behalf of that body, stating that the best technical assistance had been obtained for the fitting and furnishing of the rooms, and giving a

THOMAS F. KEATING, TREASURER N. Y. HARDWARE CLUB.

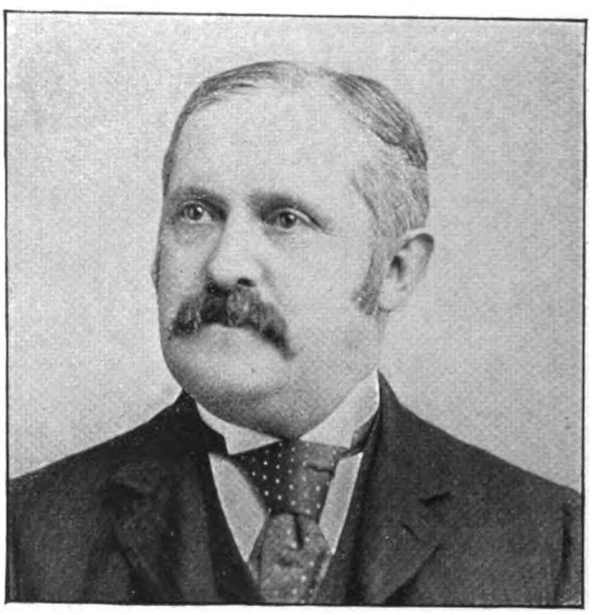
detailed explanation as to the proposed purchases which the club had in mind. A resolution was adopted, endorsing the course pursued by the board of governors, and pledging the club to a loyal support and co-operation in the future.

The board of governors had the pleasure of meeting on April 18, 1894, for the first time in the new club rooms in the Postal Telegraph Building. A great deal of business was transacted in the way of minor details in relation to the opening and occupancy, etc. It was decided that there should be a formal opening of the club house.

The long-expected for once actually happened, and early in May it was the privilege and pleasure of the board of governors to announce that after long delay, patient waiting and arduous labor upon the part of all, the new rooms were ready for occupancy, and would be formally opened for inspection on Thursday, May 31st, while the club would actually begin house keeping on the day succeeding, which memorable event stands as a red-letter day in the annals of the club—June 1, 1894. Over two years had elapsed since the club had come into existence, during which time it had existed only upon paper, and in the hopeful and patriotic good-will of its members.

On May 31st, the doors of the club rooms were thrown open to the members, and their guests, some two thousand tickets of invitation having been issued. A very large proportion of the membership were able to be present, with many guests, and from 11 A. M. to 5 P. M. the rooms were filled with a constantly changing stream of visitors, among whom were many ladies; the club extending hospitality in the form of a choice lunch. At that date the membership had reached a total of 365. On June 1st the actual house-keeping commenced, and the club felt justified in regarding itself as having been successfully launched upon a career which has been in every respect fully equal to the highest expectations of those who had labored so long and faithfully to make the organization a success.

The first annual meeting of the club as such held in the new club rooms, was on June 25, 1894, which was an adjourned meeting from March, when the constitution prescribes that the annual meeting shall be held, at which a quorum was not in attendance. At the meeting in June an elaborate report was presented by Eugene Bissell, chairman of the house committee, in which he touched upon the condition of the club at the time, and suggested its future in the following apt words:



"In conclusion, let me add, that our members are now located in quarters they can call their own. Your club is fairly and successfully launched, and ready to fulfil the mission for which it was organized. It now remains for its members to keep it in the high position to which it belongs. Your board of governors cannot do this alone.

It needs the assistance of each and every member to aid in its advancement.

This club now enjoys an excellent reputation, and it should be the aim of all its members to see that its present standard is not lowered. Your committee may have made some errors (and it would be surprising if they had not,) but such as they are, we hope you will overlook them. We thank you for the confidence you have reposed in your committee, and trust the result of their labors up to the present time meets with your approval."

There is very little to be said concerning the detailed history between that day of successful opening and the present. There have been many accessions to membership between that date and this, some resignations, and a number of lamented losses by death.

In the death of William H. Williams, the first president of the club, which occurred suddenly on August 14, 1895, the officers and members felt that they had lost a true and beloved friend, a faithful counselor, and a wise and careful executive officer. Mr. Williams devoted to the club his best energies, and gave to its interests most faithful and patriotic service, and it seems appropriate in this connection to quote briefly the following from the resolutions adopted by the board at that time, as they fully and ade-

J. L. VARICK, SECRETARY N. Y. HARDWARE CLUB.

quately express the sense of the members of the board of governors concerning their loss and that of the club:

"We desire to place upon record our appreciation of the invaluable services rendered this club by William Hilton Williams, whose death has come to us and to the membership of the club of which he was the honored and efficient president, as a personal sorrow. We recognize the influential part which he had in the organization of the club and in the subsequent direction of its affairs. He possessed in a marked degree, not only the qualities which made him an efficient and felicitous presiding officer, but

Digitized by Google

a rare combination of wisdom, energy, breadth of view and tact such as are required in the direction of affairs. These traits, together with a charm of manner and a sincere cordiality and courtesy, and the honor in which he was held for his personal worth, contributed to make him an ideal president. To this office he was repeatedly chosen, and has been the club's only president."

It was found necessary a couple of years since to extend the limit of membership so that many who were anxious to belong to the club, and who, by right, belonged there should not be excluded from the advantages of the club,

WILLIAM H. WILLIAMS, FIRST PREST. N. Y. HARDWARE CLUB.

and it was therefore decided to place the limit of membership at 600 for resident members and 200 for non-resident. The membership now is: 568 resident members and 119 non-resident.

JAMES H. KENNEDY.
Secretary Hardware Club of New York.

New York City, N. Y.

Mississippi and Missouri Valley Hardware Association

Editor Hardware: I received your favor of the 14th inst., and in looking the matter up, I fear that I will not be able to give you as complete and full information as you may wish to receive. To go into the present condition of the Association: First would say that although the officers still hold their positions, the Association is practically out of existence. At the last meeting, held in Des Moines, July 21, 1896, it was decided that no date for the next annual meeting should be announced, but if anything important transpired, where the Association could be of benefit to its members, as a body, that it would be called together.

In going back to the origin of the Association, the first meeting was held at Davenport, Ia., on April 17, 1884, with the following members assembled:

A F. Williams, of Sieg & Williams, Davenport, Ia.
J. W. Stewart, of Stewart & Montgomery, Rock Island, Ill.
C. A. Fried, of Lee, Fried & Co., Omaha, Neb.
C. W. Hackett, of Strong, Hackett & Co., St Paul, Minn.
J. W. Conchar, of Schreiber, Conchar & Co., Dubuque, Ia.
John Conover, of J. F. Richards & Co., Leavenworth, Kan.
Allen Rector, of Rector, Wilhelmy & Co., Omaha, Neb.
F. W. Angel, of L. C. Dessaint & Sons, Davenport, Ia.
J. R. Nutting, of Sickels, Preston & Co., Davenport, Ia.
W. S. Wright, of Devol & Wright, Council Bluffs, Ia.
L. C. Empkie, of Empkie Hardware Co., Council Bluffs, Ia.
W. G. Byron, of Janney, Semple & Co., Minneapolis, Minn.
F. M. Stafford, of Stafford & Rix, Keokuk, Ia.
Wm. Andrew, of Andrews, Tredway & Sons, Dubuque, Ia.
T. J. Rogers, of Milton Rogers & Son, Omaha, Nebr.
L. H. Drake, Burlington, Ia.
Robert Donahue, Burlington, Ia.
Wm. H. Hall, of Hall & Willis Hardware Co., Kansas City, Mo.
John Conover, of Richards & Conover Hardware Co., Kansas City, Mo.
A. M. Ozmun, G. L. Farwell, of Farwell, Ozmun & Jackson, St. Paul, Minn.

At this meeting, C. W. Hackett was elected permanent president, W. H Hall, vice-president, J. R. Nutting, secretary, and C. A Fried, treasurer. One of the principal topics discussed in this meeting, was the securing of better rates on large shipments, to jobbing centres in the west.

Regular meetings of the Association were held after this annually at different cities, represented by the members of the Association. One of the most pleasant, perhaps, was the meeting at Lake Minnetonka, Minn., held on July 12, 1892.

The last meeting was held at the Hotel Savery, in Des Moines, Ia., July 21, 1896, with the following membership represented:

C. W. Hackett Hardware Co., by C. W. Hackett.
Farwell, Ozmun Kirk & Co., by Mr. C. H. Bigelow, Jr.
Schreiber, Conchar & Westphal Co., by J. W. Conchar.
Knapp & Spalding Co., by C. E. Hughson.
J. D Seeberger, by Mr. J. D. Seeberger.
Harper & McIntyre, by S. H. Harper.
Geo. Haw & Co., by F. W. Simmons.
Huber & Kalbach, by Mr. Kalbach.
Lee-Clarke-Andressen Hardware Co., by W. M. Glass.
Rector & Wilhelmy Co , by W. S. Wright.
Wyeth Hardware Co , by J. A. Warner.
Blish, Mize & Silliman Hardware Co., by J. B. Silliman.
Richards & Conover Hardware Co., by M. A. L. Ruhl.
National Hardware Association, by its Secretary-Treasurer, T. James Fernley.

At this meeting it was decided that the various local associations and the National Association about covered the work that was laid out for this Association. The territory covered took in Duluth, on the north, to Keokuk, on the south, on the Mississippi River, and from Sioux City on the north to Kansas City on the south, on the Missouri River. Also the different jobbing towns through the State of Iowa, Minnesota, Kansas and Nebraska. At the last meeting of the Association, a very full representation was present, which included the members above mentioned.

The present membership remains the same, and the officers are as follows:

President: S. H. Harper, Ottumwa, Ia.
Vice-President: J B Silliman, Atchison.
Secretary: C. E. Hughson, Sioux City, Ia.
Treasurer: C. Huber, Oskaloosa, Ia.

Yours very truly,
C. E. HUGHSON,
Secretary Mississippi & Missouri Valley Hardware Association.

Sioux City, Iowa.

The earliest discovery of iron within the present limit of the country was in the mountain range of western North Carolina, and the first effort to manufacture it into merchantable form was made in the State of Virginia in 1619 The foundry was destroyed by the Indians in 1662.

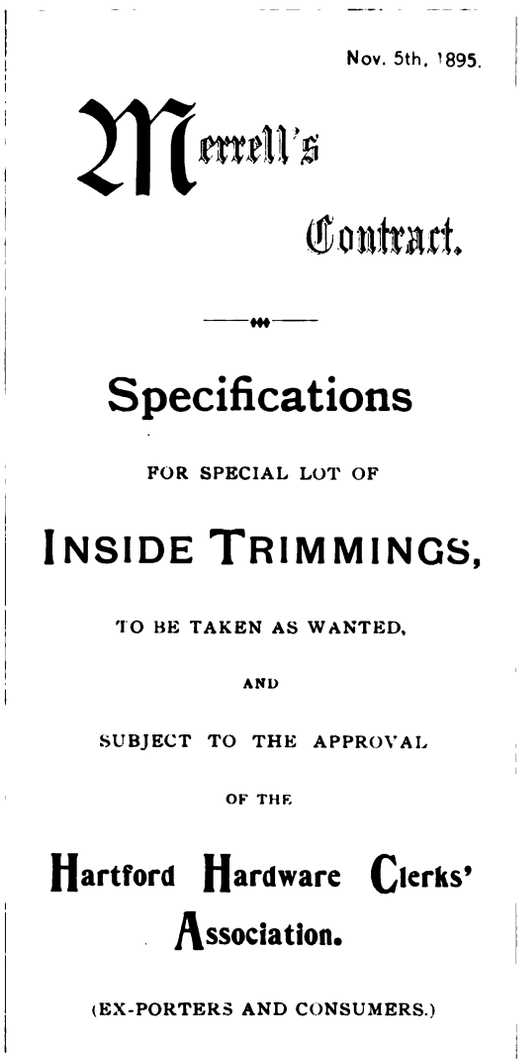
Hartford Hardware Clerks' Association.

Editor Hardware: When your request came to hand, I at first thought that our Association was of so little account at present that it would be as well, perhaps, not to appear in public.



However, it may be of interest to others to know something of our organization, its objects, and its field for successful operation, if the time, energy and brains are put into it. The Hartford Hardware Clerks' Association was organized October 22, 1894. Its objects and principles are stated fully in the constitution herewith enclosed. The meetings for a considerable time were well attended, and much talent and originality shown by members in providing attractive entertainment. Debates, musicales, smokers, suppers, dramas, etc., were often given, and contributed much to the general good feeling. We were unfortunate after a time in losing the leading spirits of the Association, and for some time now the only event of importance has been our annual banquet. I enclose a menu used at one such affair, which has been highly commented upon by the "trade." I also mail you a photograph of our members as they appeared in a "hard-times" social. It goes without saying that this shows us in our more prosperous days. With more favorable conditions and the prospect of additions to our membership soon, we look for a revival of interest and progress all along the line.

Respectfully yours,

FREDERICK C. BIDWELL,

President Hartford Hardware Clerks' Association.

Hartford, Conn.

Nov. 5th, 1895.

Merrell's

SUBJECT TO THE APPROVAL

OF THE

Hartford Hardware Clerks' Association.

(EX-PORTERS AND CONSUMERS.)

As a suggestion to Hardware clerks elsewhere, in case an organization of this character should be contemplated, we reproduce several extracts from the constitution of the Hartford organization:

Article II: Its object shall be to improve social acquaintance and promote a more friendly feeling among its members, to give an opportunity for discussion and interchange of opinion on any topics of general interest to the Hardware trade, and to secure united effort and influence in any worthy cause which may properly receive its attention.

Article III: Any person of good character, and whose experience and qualifications in the Hardware business are satisfactory to the committee, may become a member, on receiving a two-thirds vote of the members present at any regular business meeting of the Association.

Article IV: Each application for membership shall be accompanied by a payment of an initiation fee of $1.00. Each member shall pay to the treasurer a monthly due of twenty five cents. Any member failing to meet this requirement shall be duly warned by the treasurer, and if at the end of four months has not cancelled his indebtedness, he may forfeit his membership in the Association.

Article V: The officers of this Association shall be and rank as follows: President, vice-president, secretary and treasurer, who, with two other members chosen by the Association, shall constitute the Executive Committee. The officers shall be chosen by ballot at each annual meeting, and shall hold their offices until their successors are duly chosen and qualified.

Article VI: The regular business meetings of the Association shall be held on the first Monday evening of each month, unless otherwise specified in the call of the secretary. The annual meeting of the Association shall be held the first Monday evening of October, and the semi-annnal meeting on the first Monday evening of April of each year. Special meetings may be called by the secretary, upon the instruction of the president.

Article VII: No intoxicating liquors shall be drunk in the Association rooms, and any member guilty of such offense makes himself liable to expulsion from the Association. No betting or card playing for money or other valuable consideration will be tolerated. All members are urged to refrain from profane speech, and are expected to conduct themselves in such an orderly and gentlemanly manner as will do credit to themselves and to the Association.

We also reproduce the invitation and menu referred to by President Bidwell in the above:

Blue Points.	Carpenters' Pencils.
Soup,	Le Page's Glue.
Roasts,	Cut Nails, schedule gravy.
	Sash Weights covered with rust.
Entrees,	Be-deviled Hangers, a la Tourtellotte.
	Carpet Tacks, smothered in Axle Grease.
Salads,	Cotton Mops, Putz Pomade dressing.
Game.	French Mouse Traps.
	Wild Turkey Dusters stuffed with Packing Needles.
Relish,	Pickled Plumb Bobs.
Ices,	Cold Chisels.
Cakes,	Lump Chalk.
Drinks.	½ and ¼ Solder.
Cigars.	No. 22 finish Butts.

Buffalo Hardware and Tinware Association.

Editor Hardware: It is a pleasure to me to read your announcement of February 10th of celebrating your eighth anniversary of *Hardware* by making it a special Hardware Association Number. Buffalo Hardware dealers have, on several occasions, tried to form associations among themselves, and about a year ago got so far as to elect officers, to an organization of the above name, but after several small meetings the thing died a natural death, and has never wakened up since. Buffalo, with its large number of Hardware dealers, ought to have one of the best organizations in the State, and I hope the day is not far off when "the Electric City" will show up with one of the best associations of the State. Yours truly

Buffalo, N. Y. CHAS. J. FIX.

Visitor. "You don't mean to tell me that you have lived in this out-of-the-way place for fifteen years?"

Citizen. "I have, for a certainty."

Visitor. "I'm surprised. I can't see what you can find here to keep you busy."

Citizen. "Neither can I. That't why I like it."

IOWA HARDWARE JOBBERS' ASSOCIATION.

Editor Hardware: The Iowa Hardware Jobbers Association held their first meeting at the Kimball House in Davenport, Iowa, on July 30, 1896. J. R. Nutting of Sickels, Preston & Nutting Co. was the temporary chairman, and W. H. Kalbach of Oskaloosa the secretary. The following firms were represented:

Schreiber, Conchar & Westphal Co., Dubuque.
A. Tredway & Sons, Dubuque.
Patrick & Luthe, Des Moines.
J. D. Seeberger, Des Moines.
Drake Hardware Co , Burlington.
Cutler Hardware Co., Waterloo.
C. T. Schmidt, Burlington.
R. Donahue Iron Co., Burlington.
Armstrong Co , Clinton.
J. W. Stewart, Rock Island, Ill.
Harper & McIntyre Co , Ottumwa.
George Haw & Co., Ottumwa.
Huber & Kalbach Co., Oskaloosa.
Sickels, Preston & Nutting Co., Davenport.

The object of the Association was to foster a friendly and fraternal feeling between its members, and unity of effort in bettering the conditions of Hardware jobbing trade in Iowa. Permanent officers were elected as follows:

President: J. R. Nutting, Davenport.
Vice President: A. W. Tredway, Dubuque.
Secretary and Treasurer: F. W. Simmons, Ottumwa.

The second meeting was held at the residence of its president, J. R. Nutting in Davenport, on June 28, 1897. The following firms were represented: Schreiber, Conchar & Westphal Co., Dubuque; A. Tredway & Sons, Dubuque; Drake Hardware Co., Burlington; Armstrong Co , Clinton; R. Donahue Co., Burlington; C. T. Schmidt, Burlington; Harper, McIntyre Co., Ottumwa; Geo. Haw & Co., Ottumwa; Huber & Kalbach Co., Oskaloosa; Cutler Hardware Co., Waterloo; J. D. Seeberger, Des Moines; Patrick & Luthe, Des Moines; Baldwin Bros., Clinton; J. W. Stewart, Rock Island, Ill.

The president called the meeting to order and said, in part:

Gentlemen of the Iowa Hardware Jobbers' Association; you are welcome to Davenport.

At the suggestion of our executive committee, you have left your offices and stores, and, at some expense and more or less inconvenience, you have again assembled for the purpose of mutual interchange of ideas that may tend to the advancement of your individual interests and profit as well as to promote the welfare of our organization.

One day only is assigned to us for the purpose, and the sun of that day is already high in the heavens, admonishing us that if we are to work "while it is day," we must quickly attend to the duties that have prompted our coming together. One year ago we found ourselves struggling against superior forces, drifting about alone without a guide or a compass amidst the turmoil of disorganized commercial strife. Some one of you, and I think it was Mr. Conchar, of Dubuque, suggested our coming together, organizing this Association, reporting our grievances, trying to correct some of the abuses that for years have been quietly entering the Hardware trade; getting acquainted with each other, believing that the meeting would, as an investment, more than repay the outlay of one day's time and would bring a net return of greater profit than we possibly could have earned for the same period at home. The suggestion was a good one, and there is no doubt that the result of the meeting placed the balance on the right side of our ledgers for 1896. Encouraged by what we accomplished then, we are again assembled, and may the returns of to-day's deliberations be still more profitable. * * * Without tresspassing further upon your valuable time, I again greet and welcome you all to the city of Davenport and to my hearth and home. Gentlemen, what is your further pleasure?

A constitution and by-laws were adopted.

It was decided that in future the regular meetings would be held on the third Wednesday of September, December, March and June of each year, the June meeting to be the regular annual meeting for election of officers, etc., etc. Officers elected for the ensuing year were:

President: J. P. Patrick, Patrick & Luthe, Des Moines.

Vice-President: W. H. Kalbach, Huber & Kalbach, Oskaloosa.

Secretary: Chas E. Otto, Drake Hardware Co., Burlington.

James W. Conchar, Dubuque, Robert Donahue, Burlington, and F. W. Simmons of Ottumwa were selected as freight committee for one year.

T. James Fernley, of Philadelphia, Secretary of the National Hardware Association, was present and contributed much to the interest of the occasion. The social features of the meeting were a lunch given by the president, his wife as hostess personally presiding. At each plate was a beautiful hand-painted souvenir in design emblematical of the trade. They were in the form of hatchets, axes, shovels, coal-hods, etc., etc. The floral decorations were also designed to represent articles of Hardware. A drive upon the Government Island, and inspection of the Arsenal followed. Commandant S. E. Blunt was exceedingly kind, showing the members through the entire works, explaining contemplated improvements and giving them any amount of valuable information concerning the Arsenal and its workings. After they had passed through the buildings, they were invited by the hospitable commandant to his elegant residence where delicious refreshments were served. A carriage drive about the island and city of Davenport concluded the meeting.

COL. J. R. NUTTING.

The September meeting was held in Des Moines, the December meeting in Waterloo, and the March meeting in Dubuque.

Peace and harmony prevails; and all of the jobbers recognize the importance and profitableness of the organization which it is hoped will continue its usefulness for many years to come.

J. R. NUTTING.

Davenport, Iowa.

Indiana Retail Hardware Dealers' Association.

Editor Hardware: Our Association was formed on February 24, 1897, and at present our membership is largely located in the northern and central parts of the State, but it is our intention to canvass and cover the entire State. The first steps, leading up to the formation of this organization, were taken late in 1896, and I believe that Mr Gertner, of the Hawks Hardware Co., Goshen, set the ball rolling by first sending out letters to, perhaps, one hundred dealers throughout the State. Not meeting with the response he had expected, he gave the matter up. The writer, after some talk with George E. Nichol, of Anderson, and one or two others, decided to take up the work, and sent a number of letters through the territory mentioned above. A number of replies were received, and on February 15, 1897, issued about fifty invitations for a meeting to be held at Marion on February 24th. At that date, we organized the Indiana Retail Hardware Dealers' Association, with about twenty charter members, and the following officers:

President: George E. Nichol, Anderson.

Secretary: M. L. Lewis, Marion.

While our success has not been what we hoped, we have at present a membership of about fifty, and feel that with just a little effort we shall get a large increase. I believe that the officers all feel this way, and are now determined to push the Association to success.

Our second meeting was held in South Bend, on February 24, 1898. We expect before the summer is over to report a membership of 200. All who have become members are enthusiastic in regard to our Association, and feel there is need of this work, and that great benefits will come to each member if he will but take an interest in the Association both in a social and business way. The officers with the executive committee have a meeting in April, and an Association meeting is called for July, in Indianapolis.

The officers of the Association at present are as follows:

President: George E. Nichol, Anderson.

Vice-President: George W. North, Columbia City.

Secretary and treasurer: M. L. Lewis, Marion.

Executive Committee: J. C. Shanklin, H. H. Taylor, Irving A. Sibley, Sharon E. Jones.

Investigating Committee: M. L. Corey, O. E. Lang, Charles Frame.

Respectfully yours,

Marion, Ind. M. L. Lewis,

Secretary Indiana Retail Hardware Dealers' Association.

At the meeting of February 24, 1897, the principles of this Association and the purposes for which it was formed, were formally set forth as follows, and we take the liberty of adding the same, as of general interest to the trade:

We claim the right to supply our goods to consumers, factories and builders, and we demand protection in this right from those from whom we buy—viz., the manufacturers and jobbers of Hardware, stoves, etc. We pledge our support and preference to all jobbers and manufacturers who are willing to recognize these principles, and will market their product through the legitimate channels of trade; but will refuse to purchase from those who seek to estabiish direct communication with consumers.

1. Protection of our members from interference with our customers and trade by those from whom we purchase.

2. Influencing efforts against demoralization in prices of leading staples.

3. Protection of members against losses through bad debts.

4. Combined efforts in influencing legislation beneficial to our interests, and in dealing with arbitrary measures of large corporations.

5. Concerted action in favor of or condemning changes in established business methods of manufacturers and jobbers.

6. Social intercourse and discussion of subjects of interest to the Hardware trade.

One of the most important provisions of the constitution is as follows:

An investigating committee of three members shall be elected annually at the annual meeting of the Association. It shall be the duty of this committee to receive and investigate all complaints, provided such complaints are made in writing and signed by the party or parties aggrieved, and that said complaints be accompanied by affidavits or other evidence to form a proper basis of complaints or source of investigation. They shall endeavor to adjust amicably all such grievance or complaints, and, if unsuccessful, shall bring the matter before the Executive Board for action. All traveling or other legitimate expenses of this committee shall be paid from the funds of the Association.

Minneapolis Hardware Association.

Editor Hardware: The Minneapolis Hardware Association, of Minneapolis, Minn., was formed on February 6, 1894, with a membership of thirteen retail dealers in this city, and at present March, 1898, has a membership of twenty-four dealers, who represent as many individual firms. Our plan was only to include those doing a retail Hardware business in this city, and this plan has been adhered to. We realized that we needed some sort of an organization, in order to meet the strong competition we find in the department stores.

We have accomplished much in the way of a more friendly feeling among the members of our Association, and I think our united efforts will eventually be of great aid to our Association, even though it may not drive the department stores into bankruptcy.

I will only say at this time, that we are thoroughly satisfied with what has already been accomplished, and we are planning a more aggressive work with the feeling that we are organized, and able to strike harder blows in the future.

I am sorry I did not find the time to give you a more detailed report. Thanking you for the privilege of having our organization recognized in your Association Number, I beg to remain,

Truly yours,

H. O. Roberts.

Minneapolis. Minn. Secretary.

We take the liberty of adding some information in regard to this live Association, to that furnished by Mr Roberts in the above. The first officers elected in 1894, were as follows:

President: W. K. Morison.

Vice-President: C. F. Stremel.

Treasurer: F. K. Warner.

Secretary: F. L. Stoddard.

Directors: C. F. Stremel, J. Stoft, F. R. Warner, J. E. Nash, H. B. Gardner, H. S. Cleveland, J. C. Pierson, Jr. C. Boehme, Jr.

The Association has celebrated several banquets, and have enjoyed that pleasant time which is always certain to ensue when a number of Hardwaremen gather in social intercourse.

Every man takes care that his neighbor shall not cheat him. But a day comes when he begins to care that he does not cheat his neighbor. Then all goes well. He has changed his market cart into a chariot of the sun.—*Emerson.*

The One.—"Oh, how I wish I had married a man who never drank. You don't know how I envy you."

The Other.—"N-no, he doesn't drink, but he smokes cubeb cigarettes."—*Exchange.*

NEW ENGLAND IRON & HARDWARE ASSO.

Editor Hardware: The geographical territory covered by the New England Iron & Hardware Association, comprises the entire New England States. There is, however, an Association in that portion of New England west of Gardiner, Warren and Webster, Massachusetts, and State of Connecticut, called the Western New England Iron & Hardware Association, formed to co-operate with the heavy Hardware department of this Association.

The first steps taken to bring our Association into existence was a desire on the part of a few jobbers dealing in heavy Hardware, to obtain better prices on certain lines of goods, which were by force of competition, driven down to cost.

The first meeting of our Association was held in May, 1893, at which time a few houses in the heavy Hardware line came together. It was thought best at that time, in order that the proposed Association might have sufficient

LEON C. CARTER, PREST. NEW ENG. IRON & HARDWARE ASSO.

prestige on the start, that all the jobbing houses and light Hardware in this city be invited to meet upon the week following, and the following houses were represented:

Bigelow & Dowse Co.
Brooks, Baldwin & Robbins.
Frye, Phipps & Co.
The Congdon & Carpenter Co.
Chase, Parker & Co.
Brown, McClure & Wales.
E. P. Sanderson Co.
Eldridge, Winnek & Irving.
Dodge, Haley & Co.
Butts & Ordway.
Emery-Waterhouse Co.
Smith, Tibbetts & Co.
Woodrough, Mansfield & Co.
Dana Hardware Co.
Boutwell Brothers.
Joseph Breck & Sons, Corporation.
McBarron & Co.

On June 14, 1893, the organization was completed, and entitled the Iron & Hardware Association. The officers chosen to preside over the deliberations consisted of a board of eight directors, to be chosen by the stockholders, and by a majority vote of those present, voting at any annual meeting. The directors and other officers were to hold their office for one year, and until their successors were chosen and qualified. The officers were to consist of a president, a clerk and a treasurer. When the by-laws and constitution were adopted, arrangements were made for the formation of a credit bureau, the general plan of which is the basis of our present one, and will be found below.

The first annual meeting of the Association was held in June, 1894; the second in June, 1895; the third in June, 1896; the fourth in June, 1897.

In October, 1893, the name was changed to New England Iron & Hardware Association, and in May, 1894, the Association was incorporated under the laws of Massachusetts.

There are at present fifty-three members in our Association, composed entirely of jobbers located in the New England States, and certain manufacturers who are associate members.

The present officers of the Association are as follows:

President: Leon C. Carter, Dana Hardware Co., Boston.

Vice-President: H. C. Bangs, Congdon & Carpenter Co., Providence, R. I.

Secretary: John T. Boyd, Yale & Towne Mfg. Co., Boston.

Treasurer: Chas. H. Breck, Joseph Breck & Sons, Boston.

Yours respectfully,

JOHN T. BOYD,

Secretary New England Iron & Hardware Association.

Boston, Mass.

Inasmuch as the Association, the history of which is briefly given above, is different in character from most Hardware Associations, in that it is organized with a capital stock, we will take the liberty of adding some quotations from the by-laws, showing the methods under which the Association works, the labors of the committees, and the management of the bureau of credit, believing that the same will be of interest to the trade at large:

CAPITAL STOCK.

First. The capital stock of said Corporation shall be twenty-five hundred dollars, ($2,500.00), and shall be divided into one hundred (100) shares of the par value of twenty-five dollars ($25 00) each.

Second. The owner of a share shall be considered a stockholder within the meaning of these by-laws; and at all meetings of the stockholders one vote shall be counted for each and every share represented and voted upon.

Third. The certificates of stock in said Corporation shall be under the seal of the Corporation, signed by its Treasurer, and countersigned by the President; and each certificate of stock shall be issued upon the following express condition, which shall be printed on the face thereof:

This certificate is issued upon the express condition that neither the owner, nor his legal representatives, shall pledge, sell, or otherwise dispose of the whole or any part thereof without prior thereto offering in writing the same to the Treasurer of said Corporation at its par value, and giving him at least thirty days' notice within which to accept said offer, and that the owner thereof shall pay his annual dues according to the by-laws of this Corporation; and any breach of these conditions shall forfeit all right of said owner, or his legal representative, in said stock: and the title to said stock shall thereupon become vested in said Treasurer for the benefit of the other stockholders in said Corporation.

DUTY OF MEMBERS.

It shall be the duty of the members to report all debtors as "Delinquents" who fail to settle their accounts within a reasonable time after demand, or when the debtor shall have been refused credit; and as "Unworthy" all persons

Digitized by Google

obtaining goods through fraud or any improper means; and as "Undesirable" all persons habitually making claims for allowances, generally failing to keep their agreements, and slow in payment; and no member shall sell on credit to any person reported by the Corporation through its bureau "Delinquent" or "Unworthy."

COMMITEES.

The Committees of the Board shall be as follows; and each Committee shall be composed of not less than three members chosen by a majority vote of the Directors present and voting; and shall have the power to add to their number not exceeding five shareholders in the Corporation who are not members of the Board of Directors:

(*a*) Membership.
(*b*) Heavy Hardware.
(*c*) Shelf Hardware.
(*d*) Metal Trade.
(*e*) Bureau of Credit.
(*f*) Arrangements.
(*g*) Finance.

HEAVY HARDWARE.

It shall be the duty of said Committee to consider the establishment of uniform prices and customs in the heavy Hardware trade, and such other matters as said Committee may deem of interest to said trade; and report their conclusions and recommendations to the shareholders and associate members of the Association dealing in heavy Hardware. Said committee shall also have power to investigate and hear all complaints for breach of any of the agreements, rules, or understandings in the heavy Hardware trade; and report thereon to the shareholders and associate members of said Association dealing in heavy Hardware.

SHELF HARDWARE.

It shall be the duty of said Committee to consider the establishment of uniform prices and customs in the shelf Hardware trade, and kindred lines, and such other matters as said Committee may deem of interest to said trade; and report their conclusions and recommendations to the shareholders and associate members of the Association dealing in shelf Hardware and kindred lines. Said Committee shall also have power to investigate and hear all complaints for breach of any of the agreements, rules, or understandings in the shelf Hardware trade and kindred lines; and report thereon to the shareholders and associate members of said Association dealing in shelf Hardware and kindred lines.

METAL TRADE.

It shall be the duty of said Committee to consider the establishment of uniform prices and customs in the Metal Trade, and the regulation of any matters which said Committee may deem of interest to said trade; and report their recommendations and conclusions to such parties in said trade as they see fit. Said Committee shall also have power to investigate and hear all complaints for breach of any of the agreements, rules, or understandings in the metal trade; and report thereon to the shareholders and associate members of said Association in said metal trade.

BUREAU OF CREDIT.

The following rules are hereby established for the guidance of said Committee:

First. Said Committee shall have jurisdiction of all matters of claims by and debts due to the members of this Association, when referred to this Corporation; and its decisions thereon shall be final and binding upon the members therein.

Second. Of all matters affecting delinquent debtors referred to the Corporation by any member; to classify said debtors, and in the name of this Corporation send delinquent debtor notices and demand letters when requested by a member; and to take such other steps in reference to said claims, debts, and debtors as to said Committee may seem advisable.

Third. To report all delinquent debtors referred to the Corporation who do not settle their accounts, claims, or debts within seven days after notification, to the members of the Association.

Fourth. Cause to be kept on the books of the Corporation, under the heading "Undesirable," the names of all persons reported by any member as slow in paying, habitually making claims for allowance, and generally failing to keep their agreements; and also to be kept on said books under the heading "Unworthy," the names of all persons reported by members as obtaining goods or credit through fraud or improper means; and also on said books, under the heading "Delinquent," the names of all persons reported by any member whose account is not settled within seven days from demand by the Corporation; and to send a list of said names to each member weekly.

Fifth To receive and hear all complaints against members for any breach of the by-laws as to the duty of members in respect to undesirable customers and delinquent and unworthy debtors; and to report its decision thereon to the members monthly.

Sixth. To contract such bills for stationery, printing, and other expenses, including the services of a secretary, as may seem to them necessary.

New York and Brooklyn's Attempt.

This is the brief record of an association that failed to accomplish that which it set out to do, due, perhaps, to the fact that it appeared prematurely before the trade was ready to accept the Hardware Association as an accomplished fact, and due, perhaps, to the fact that it attempted too much.

On February 16, 1891, Frank Vanderbilt, dealer in Hardware, house furnishing goods, etc., at No. 1301 Broadway, Brooklyn, N. Y., issued a circular in which he said: "I would like to consult you and others (in some suitable place), that are in my line of business, to see if we cannot form ourselves into a Protective Association. What we must do is to stop wholesale firms from selling their wares at retail and placing their goods into stores that do our business an injury. I claim we can do it, and I am still sure we shall reap a rich reward for our labor. We must get together and show our strength and power; refuse to buy of said firms, and you will find that they will soon get weak. What right have they to sell a stove and repairs at retail? If you think favorably of this, please talk with others that you know, and be kind enough to write me your answer, and also get them to write me."

Several meetings were held in response to this request. Robert Anderson, of Anderson Bros, No. 394 Grove Street, Jersey City, N. J, has written us concerning the same. "I was secretary of the organization," said he, "and a great many dealers were ready to join, and did so to the extent of paying their dues, but it seemed impossible to get a representative attendance at meetings. In response to personal requests, dealers would say, 'Yes, go ahead and form your organization. We need it. We will join.' Beyond paying their dues, they did little or no work.

"As to the cause of the death of the organization, I would state that in my opinion its scope was too large, taking in as it did all branches of the retail trade, together with lack of individual personal effort on the part of the members. The organization held several meetings in New York and Brooklyn, reports of which I furnished you at the time."

At one of the earlier meetings of the organization named, the Hardware & Stove Dealers' Association, it was resolved that the members should withdraw their patronage from all concerns which persisted in selling to outsiders, or in retailing goods at less than retail prices. The officers were: Frank Vanderbilt, Brooklyn, president; John W. Stantial, New York, treasurer; Robert Anderson, Jersey City, secretary. The initiation fees were fixed at $2, and monthly dues at 25 cents. Several meetings were subsequently held, and steps were taken for the drafting of an address to the wholesale dealers. On July 10, 1891, one of the members wrote to *Hardware*, "The effects of this matter are already being felt. Both the wholesale men, and the local organizations of the retail dealers in their respective cities have given their attention to the subject."

The matter seems to have ended practically then and there, as the organization grew beautifully less in interest and regularity of meetings thereafter, until, as Mr. Anderson writes us, it became a beautiful and interesting reminiscence.

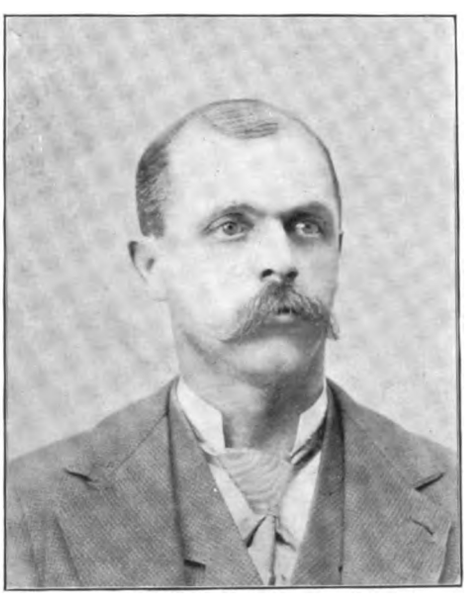
MINNESOTA RETAIL HARDWARE ASSO



Editor Hardware: The movement for the creation of this Association seems to have originated at St. Cloud, the home of our worthy president, to whom much credit is due for attending to the preliminary work of calling the Hardware dealers of the State together, at St. Paul, on April 29, 1897, when over two hundred business men met to devise ways and means of correcting the evils of which they had so long and bitterly complained. Senator Stebbins, of Rochester, was elected temporary chairman, a working constitution was framed and adopted, and by-laws for the regulation of the Association were made. In recognition of the services already performed, and of his ability to still further advance the interests of the Association, Charles F. Ladner was elected president, A. T. Stebbins, vice-president, and B. W. How, treasurer. The following gentlemen were elected as the executive committee: C. F. Stremel, W. H. Tomlinson, Clement Schroeder, M. R. O'Neill, Jas. E. O'Brien, John Karst, Edward A. Moye, Chas. F. Ladner, A. T. Stebbins.

The large number of dealers present, and the fact that sixty of them then and there paid their money and became charter members, is positive proof that they were gathered together with a firm and steadfast resolution to form the nucleus from which it was believed much benefit would result to the Hardware business of the State. While the number to join at this time was, perhaps, not as great as it might have been, yet it was none the less a record-breaker to start with, as will be seen later by comparison.

The following day the executive committee met. The question of ways and means was discussed, and plan of action decided upon. President Ladner was requested to prepare a circular letter to the trade, and to attend to any work that might be necessary, until such time as a permanent secretary could be arranged for. Mr. Ladner had the circular letter prepared at once, and by May 15th it was in the hands of the dealers throughout the State. It was an earnest invitation to join, and an application blank was enclosed for that purpose. A copy of the constitution and by-laws was also sent. In the meantime, while the leaven was working, President Ladner had issued a call for a meeting of the executive committee to be held at St. Paul, June 3rd, at 10:30 A. M. This meeting was called to order by him, all members being present. E. A. Moye acted as secretary. A memorial from the Minneapolis Hardware Association was presented by Mr. Stremel, endorsing the resolutions of the State organization. A committee consisting of Messrs. Stremel, O'Brien and Stebbins was appointed to draft a letter to be sent to the jobbers and manufacturers, setting forth the objects of the Association. A letter to the retail dealers of the State was prepared, and the secretary instructed to send it out as soon as possible. A recess until 2 o'clock was taken, at which time committee on letter reported. On motion it was reported, and the secretary instructed to send copies of it, and the constitution and by-laws, to all jobbers and manufacturers doing business in this State, and to all trade newspapers. J. W. Clark was selected as secretary of the Association. On motion, Mr. O'Neill and President Ladner were authorized to select and furnish an office in the city of St. Paul. The office of the secretary has since been removed to No. 323 Boston Block, Minneapolis.

The first work of the secretary was to prepare a complete list of retail dealers of the State, and it was found that there were nearly 2,500 dealers selling Hardware in this State. Upon investigation, jobbers were found responsible for this. The list included well diggers, tin shops, blacksmiths, repair men, junk shops and supply houses. 'After checking and rechecking several lists and reports, a revised list of nearly 1,300 names of retail Hardware dealers was completed.

The Minnesota Association, when organized April 29, 1897, had sixty charter members, but has since increased its membership over four hundred per cent., having to-day 352 members in good standing, making it the largest retail Hardware association in the United States. We have members in every county in the State, (where there is a Hardware dealer) with the exception of three. No other association has prepared and sent lists of jobbers and manufacturers to all Hardware dealers in its State as we have done. In doing this it has given us much greater power and influence than otherwise would have been possible in the beginning. Owing to the expense, it may be deemed necessary to send reports to members only in the future, and now having such a large and influential number of dealers as members, this plan can no doubt be adopted with safety. Those dealers who have supported the Association as non-members will see that it is hardly fair to reap unless they sow, and will probably send in their fees and become members soon.

J. W. CLARK, SECRETARY MINNESOTA ASSOCIATION.

The first annual meeting of the Association was held in Minneapolis on February 9 and 10, 1898, President Charles F. Ladner in the chair. The annual report of the president and secretary were read, and the showing of the treasurer was to the effect that the Association was in good financial condition.

The first business that came before the Association was the election of officers for the coming year, the following being chosen:

President: C. F. Ladner, St. Cloud.

Vice-President: A. T. Stebbins, Rochester.

Executive Committee: W. H. Tomlinson, Le Sueur; Frank Stremel, Minneapolis; Chas. Schleck, St. Paul; J. E. O'Brien, Crookston; J. P. Watson, Marshall; E. A. Moye, Duluth; Clement Schroeder, Mankato.

A number of addresses were delivered, and interesting papers read, all of which were recently reported in the trade journals so that it will not be necessary to refer to them here. The following resolutions among others were adopted;

Whereas, It appears that the Retail Furniture Dealers' Association of Minnesota, North and South Dakota are working along the same lines, and for the same purpose as our own Association, and

Whereas, It is desirable that we shall have the aid and assistance of other organizations of business men in kindred lines in the reform which we are seeking to accomplish, therefore be it

Resolved, That we pledge our members to use their personal influence with the furniture dealers in their respective towns to give their aid and support—and their membership—to the Association of Retail Furniture Dealers, firmly believing as we do that the strengthening of this and kindred organizations of retail merchants will be an important element in the educational campaign to which our Association is committed and for which it was formed.

The session was one which showed great interest on the part of all who were present. To-day we have 352 loyal members, and a corps of full working officials whose hearts are entirely interested in the work they have undertaken.

We believe that we are the first Hardware Association to take up the work of fighting catalogue houses and department stores along the lines as conducted by us, and placing the jobbers and manufacturers on record, and mailing our members a list of them.

Respectfully yours,

J. W. Clark,

Secretary Minnesota Retail Hardware Association.

Minneapolis, Minn.

New York & Vermont Association.

Editor Hardware: The Eastern New York & Vermont Hardware & Iron Association covers the territory which

JAS. L. DUNN, PRESIDENT EAST N. Y. & VT. HARDWARE ASSO.

its title defines, though the word "Eastern" may not accurately convey to ones mind the exact boundaries in this great Empire State of New York. Ultimately our limits will be from the Canada line on the north from its extreme eastern portion west to and including St. Lawrence county, south along the western line of Herkimer, Otsego, Delaware, Sullivan and Orange counties, and the entire territory east of this line to the New England States; besides this, the whole State of Vermont.

Although for fully two years past it has been the hope of several of the present members that in time an organization would be formed, and, during the interval, work leading up to the consummation of this wish has been performed, it did not crystallize until January 13th of this year, when the few pioneers assembled at Saratoga, and guided by several members of the two New England Associations who were present, the work was accomplished and we "came into being" under quite favorable auspices. It was a repetition of the starting of nearly all similar bodies—the meeting of men known to each other only by name of their respective houses, who, in the past, had possibly distrusted one another and between whom, as is the rule, feelings of narrow jealousy had existed. Being brought face to face, and meeting each other socially, but a short time was necessary to convince all present that lines could be agreed upon in the management of business that would lessen its friction, make life happier, and result in increased profit to all.

Thus we started, and our following meeting in Albany resulted in the adoption of constitution and by-laws, and election of officers as follows:

President: James L. Dunn, Troy, N. Y.

Vice-President: Richard Ryan, Rutland, Vt.

Secretary: Charles H. Turner, Albany, N. Y.

Treasurer: Guilford Dudley, Poughkeepsie, N. Y.

Directors: A. E. Tanner, Fort Plain, N. Y.; J. T. Johnson, Rondout, N. Y.; Joseph F. Whalen, Burlington, Vt.

Uniform prices of a few leading articles in heavy Hardware, viz: horse shoes, horse nails, springs, axles and steel of several kinds, have been agreed upon, which are practically the same as those of the sister Associations in New England. Correspondence will be carried on through the officers, relative to abuses and irregularities that may arise, and every measure will be considered that will conserve to our mutual interest.

Efforts to draw into our Association those dealers in our territory not enrolled, as members, will at once be made, and it is hoped and expected that in a short time, while we may be the youngest, our aspirations are to be one of the strongest and most useful organizations of our kind.

Chas. H. Turner,

Albany, N.Y. Secretary New York & Vermont Association.

New York Hardware Club Election.

At a meeting of the board of governors of the Hardware Club of New York, held on the afternoon of Friday, March 25th, occurred the election of officers for 1898.

Peter McCartee, who has so ably and faithfully served during several terms past, was unanimously re-elected to the position of president.

R. H. Swayze, who has been the efficient vice-president of the club since its organization, was re-nominated to that office, but positively declined to accept the same. George H. Sargent was thereupon unanimously elected vice-president of the club.

Thos. F. Keating, who has also been one of the most efficient officers of the club since its organization, was unanimously re-elected to the position of treasurer.

J. L Varick, who has performed most faithful and able service as secretary of the board since organization of the club, positively declined a re-nomination, and James H. Kennedy was unanimously elected to that position.

Caricaturists in depicting a German are in the habit of putting a big pipe in his mouth. The pipe is national, indeed, but the Germans as a nation are far from being the greatest smokers. They do not smoke more than Frenchmen, Russians, Swedes or Hungarians. The men of the United States and the men of Switzerland are the most inveterate smokers on earth. In these two countries the consumption of tobacco per head is three times greater than in Germany. At the same time the United States raises more tobacco than any other country on the globe. British India comes next, producing nearly as much.

NORTH DAKOTA HARDWARE ASSOCIATION.

Editor Hardware: For the benefit of your readers, and our brother Hardware dealers, I take pleasure in submitting to you a synopsis of the work done in connection with the organizing and perfectiug of the North Dakota Retail Hardware Association, and I trust that it may contain in it some information that will assist in stimulating the retail Hardware dealers in unorganized States, to a point where they will at once start to perfect organizations, and join with us and other kindred State associations, in our grand National Association, to be composed of every available retail Hardware dealer in the United States.

In June last, a correspondence was started among the Hardware dealers throughout the State, to ascertain the feeling relative to forming an association, in North Dakota, of such dealers. It happened that the work of agitating the advisability of forming such an association, fell to me, and on August 16, 1897, I prepared a circular letter and sent it to every regular Hardware dealer in the State, asking an expression on such matters as:

Are you in favor of an organization?

Will you become a member?

Will you send a representative to help organize?

When do you consider the most desirable time for holding first meeting?

What town would you prefer first meeting held in?

After receiving the replies and comparing notes, they indicated, without a doubt, that the trade throughout the State wanted an association, and wanted it at once.

On September 15th, I sent out a call signed by seventy Hardware dealers scattered throughout the State, for a meeting to be held in Grand Forks, September 29th.

This was an unfortunate time of the year for the first meeting, as it was probable that all dealers were busy, and could only leave their business with difficulty, but for all that, the meeting was an enthusiastic one, and those in attendance, feeling fully convinced that an organization of the Hardware dealers of the State was what was wanted, organized then, with twenty-eight members, and perfected an asscciation with Clark W. Kelley, Devil's Lake, president; C. F. Jacob, Hillsboro, vice-president; Geo. A. McCrea, Drayton, treasurer; C. N. Barnes, Grand Forks, secretary; and with seven members, as follows, that constituted the executive board: H. N. Joy, Hamilton; H. F. Strehlow, Casselton; W. H. Pinkerton, Lakota; J. C. LeBeau, Grand Forks; T. F. Newgard, Grafton; A. S. Duntley, Grandin; A. J. Smith, Fessenden.

From the very start, every dealer in attendance at the initiatory meeting worked hard to get the Hardware dealers throughout the State to come into the Association, and I can assure you that it is with a great deal of pleasure that I am able to report the North Dakota Retail Hardware Association as one of the largest in the United States, as compared with the number of available Hardware dealers in the State.

The solicitation of members has been almost entirely through the correspondence of the officers, but the Association has among its friends several traveling salesmen, selling Hardware in the different towns throughout the State, that have furnished valuable assistance to the Association in procuring new members and explaining to doubting dealers "Why our organization was commendable," and to these traveling men I believe our Association is greatly indebted.

At the present time our membership numbers over one hundred loyal dealers out of a possible 190 legitimate Hardware dealers, and covers all parts of the State, having members in every county where there is a Hardware dealer, but three; in one county in the State we have every dealer, several counties we have all but one or two, and in many two-thirds of all the dealers.

As it was only last September that we first organized, we have held but one annual meeting, that one being held at Fargo on February 16th. It was well attended, and an enthusiastic one from start to finish. The time was occupied in a general discussion of any and all matters that were suggested by members, but one of the most important that was taken up at this meeting was the sanction of our Association to the perfecting of a Northwestern Association, which was mapped out at the Minnesota meeting a week prior. From the start, it was very evident that our organization wanted the formation of a Northwestern Association, and it was by a very unanimous vote of the convention that the resolution to form such an association was adopted.

As it now stands, we have an Association of about one thousand members distributed throughout the States of Wisconsin, Minnesota and North Dakota. While we have perfected the Northwestern Association, we do not in any way give up our State organizations, and I am very proud of the great interest the members throughout the State and the officers of the Association are taking in the work since our Fargo meeting.

At the annual meeting there were but few changes made in officers or executive board, but as the southern part of the State had but small representation on the executive committee, it was divided up at this meeting, so all parts of the State are now with representation.

As it now stands, the A sociation has for its president, Clark W. Kelley, Devil's Lake; vice-president, C. F. Jacob, Hillsboro; treasurer, H. N. Joy, Hamilton; secretary, C. N. Barnes, Grand Forks; and executive committee: H. Harrington, Fargo; W. R. McIntosh, Bottineau; H. B, Allen, Jamestown; I. L. Newgard, Grafton; H. L. Eastman, Wahpeton; A. J. Smith, Fessenden; W. H. Pinkerton, Lakota.

The principal work of our Association since its formation has been to try and check, as much as possible, the sale of Hardware by jobbers and manufacturers to the department stores and catalogue houses, and in this particular feature of our work we have accomplished a great deal. From the very large proportion of all jobbers and manufacturers soliciting trade in the Northwest, they have pledged their support in our work, and in every case where they have promised to co-operate with us, I have never learned, nor has my attention ever been called to a case, where they have done anything but what they agreed to do.

In our State we have but one meeting of the Association each year; our next will not be held until February 15, 1899, but our executive board meets at such times as the president deems necessary to transact business.

I would say, in conclusion, that if there are any States in the Union that contemplate organizing and feel that they have no grievance to contend with in the line of department stores and catalogue houses, that such States when organized will feel more than repaid for the labor in organizing, from the mere fact of becoming acquainted with their

Digitized by Google

brother dealers throughout their own State and exchanging ideas and discussing conditions as they exist.

Yours respectfully,

C. N. Barnes,

Secretary North Dakota Retail Hardware Association.

Grand Forks, N. D.

N. Y. State Association of Hardware Jobbers.

Editor Hardware: Complying with your request of the 7th ult., I am pleased to give you below a short historical outline of the New York State Association of Hardware Jobbers.

It was during the summer of 1888, during a friendly conversation among a few Hardware jobbers in the city of Rochester, that it was suggested by John W. Goss, of the Weaver & Goss Hardware Co., that a social meeting of the trade in New York State be held, with the object of causing a closer acquaintance between competitors, leading up to greater confidence and relations which would result in greater prosperity. It was on these lines that this Association was formed, and on the same lines that it has ever since carried on its work. We believe that the results accomplished since organization have fully justified its

C. H. TURNER, PREST. NEW YORK JOBBERS' ASSOCIATION.

existence. Without any idea of forming a close corporation which should unjustly restrict prices, but with the object of creating a more friendly intercourse between its members, which would do away with some of the evils of unfriendly competition which formerly existed, we believe that we have attained our aim.

The first meeting of this Association was held in the city of Rochester, October 30, 1888.

We hold about five meetings during the year, which are held in different cities of the State in rotation.

The territory affected by this organization is principally New York State and northern Pennsylvania.

The officers elected for the first year were, Robert McCarthy, Syracuse, President; C. E. Walbridge, Buffalo, Vice-President; James W. Eager, of Syracuse, Secretary and Treasurer. These offices have since then been in the hands of various members of the organization.

At the present time the officers are Charles H. Turner, Albany, President; J. W. Black, Syracuse, Vice-President; S. J. Weaver, Rochester, Secretary and Treasurer.

Yours Very Truly,

S. J. Weaver,

Secretary N. Y. State Association of Hardware Jobbers.

Rochester, N. Y.

Hartford Hardware Association.

Editor Hardware: The Hartford Hardware Association was formed on July 30, 1889. The records read: "A meeting of the Hardware dealers of Hartford, held at the store of Tracy, Tarbox & Robinson, at 8 o'clock P. M., at which meeting all the dealers in Hartford were represented, with the single exception of R. D. Hawley & Co. Committees were appointed, who reported at a meeting held August 12, 1889. The object of this Association shall be: To bring about a better acquaintance among the members, to promote harmony and good feeling between members, and provide such protective measures as shall, from time to time, appear to be necessary to the welfare of this Association."

The membership at that time was composed of these firms: Tracy, Tarbox & Robinson, J. C. Woolley & Co., R. D. Hawley & Co., Willis Thrall & Son., Clapp & Treat, Warren & Co., Blodgett & Clapp Co., Storrs & Candee. Wm. E. Cone was elected president; R. F. Way, secretary.

Since that date the organization has been kept up though changes have been made in its membership.

The territory we cover is practically Hartford County, although some business is done in Tolland, Middlesex, Litchfield and New Haven counties.

We hold meetings monthly, and intend having a social gathering twice a year, with a dinner. The officers since organization have been: Presidents: Wm E. Cone, from 1889 to 1893; John F. Tracy, 1894 and 1895; Wm. Francis, 1896 and 1897. Secretaries: R. F. Way, 1889 to 1893; Irving C. Treat, 1894; John B. Clapp, 1895 to 1897. The Association is at present composed of the following firms:

Tracy & Robinson, Hartford, Conn.
J. H. & Wm. E. Cone, Hartford, Conn.
Francis & Co., Hartford, Conn.
Way Hardware Co., Hartford, Conn.
Cadwell & Jones, Hartford, Conn.
Edward B. Thrall, Hartford, Conn.
Clapp & Treat, Hartford, Conn.
The Blodgett & Clapp Co., Hartford, Conn.
L. L. Ensworth & So·, Hartford, Conn.
John B. Clapp & Son, Hartford, Conn.
H. H. & E. W. Abbe, New Britain, Conn.
Herbert L. Mills, New Britain, Conn.

The organization is in a strong, healthy condition, and its members are loyal to its objects and principles.

Yours truly,

John B. Clapp,

Hartford, Conn. Secretary Hartford Hardware Association.

An expert has contrived the following statement to show the economy effected by labor-saving machinery: One man and two boys do the work which it required 1100 spinners to do but a small number of years ago. One man does the work now of 50 weavers, who were required at the time of his grandfather. Cotton printing machines have replaced 1500 per cent. of hand labor. One machine, with one man as attendant, manufactures as many horseshoes in one day as it would take 500 men to make in the same time. One nail machine has taken the place of 1000 men. In the manufacture of paper 95 per cent. of hand labor has been replaced. By the use of machinery in loading and unloading ships one man can perform the labor of 2000 men working without its aid. Steel ties machinery produces a saving of 500 per cent. Typesetting machines effect an economy of 150 per cent.—*American Exporter.*

Tornado Tom.—"So Ike's gone to visit his father, has he? That must have been his uncle then that we lynched year before last for horse stealing."

Sheriff (of Tombstone.)—"Oh, no; that was his father. That's the feller he's gone ter visit."—*Exchange.*

MICHIGAN HARDWARE ASSOCIATION.

Editor Hardware: The Michigan Hardware Association was organized mainly through the efforts of F. S. Carlton, of Calumet, who, thinking that an organization of Hardware dealers might be effected, sent circular letters to a number of firms throughout the State.

In response to these letters, about twenty firms sent representatives to Detroit, July 9, 1895, where our first meeting was held, and the Michigan Hardware Association was organized with the following officers:

CHARLES F. BOCK, PRESIDENT MICHIGAN HARDWARE ASSO.

President: F. S. Carlton, Calumet.

Vice-President: H. C. Weber, Detroit.

Secretary and Treasurer: H. C. Minnie, Eaton Rapids.

The work of the first meeting consisted in forming the constitution and by-laws, after the adoption of which the meeting adjourned. A special meeting, held in Saginaw, February 12, 1896, was full of interest to the members. The membership had increased to fifty: topics of vital interest to the Hardware trade, wholesale and retail, were taken up at the sessions of this convention, and discussed. Among other subjects brought up for debate were the lien laws of Michigan and the present nail card, after which some very interesting papers were given. The meeting closed with an elaborate banquet.

The first annual meeting was held in Detroit, July 8 and 9, 1896, which was a very interesting and instructive session.

A committee was appointed to draft a suitable lien law. The papers given at this gathering were full of good points and all felt benefited by them.

H. C. Weber, of Detroit, was elected president; C. F. Bock, of Battle Creek, as vice-president; and H. C. Minnie of Eaton Rapids, secretary and treasurer. Among the social features of this meeting was a fine banquet and a trip on the Detroit river.

The enthusiasm of the members was now thoroughly aroused, and all prophesied that the Michigan Hardware Association was bound to be a success.

The Association held its second annual ocnvention at Battle Creek, July 14 and 15, 1897, and a profitable time, both from a business and social point of view, was enjoyed by all.

The attendance was good; roll call showing one hundred and thirty-one members, and the matters under discussion could not fail to be of interest to the Hardware dealers generally.

During the past year we have secured the passage of a new lien law, and now Michigan can boast of having the best lien law of any State in the Union.

It not only protects the laborer but the person who furnishes the material as well. The Association had the law printed with instructions how to put a lien on property without the assistance of an attorney, and the same is furnished to its members.

The officers for the ensuing year were:

President: C. F. Bock, Battle Creek.

Vice-President: H. W. Webber, West Bay City.

Secretary and Treasurer: H. C. Minnie, Eaton Rapids.

Mr. Bock is at present devoting considerable time to visiting Hardware dealers in the larger cities of Michigan, in the interest of the Association. He is meeting with great success, adding new members; in fact, he is making a clean sweep of all the reliable dealers in every city visited.

We now number about two hundred. The next annual meeting will be held at Detroit, July 13 and 14, 1898, and we hope to have a large attendance. We take the opportunity offered through the columns of your valuable paper to invite all Hardware dealers of the State to attend this meeting.

Enclosed please find a copy of constitution and by-laws, and we call your attention to Articles 13, 14 and 15, which we expect will be of much importance to Hardware dealers.

H. C. MINNIE, SECRETARY MICHIGAN HARDWARE ASSO.

Hoping to have the pleasure of meeting you at our next meeting, I remain,

Yours Respectfully,

HENRY C. MINNIE,

Secretary and Treasurer, Michigan Hardware Association.

Eaton Rapids, Mich.

The sections of the constitution to which Mr. Minnie calls attention are as follows:

Article XIII: Any manufacturer or jobber soliciting

Digitized by Google

orders or selling goods in any town or city where a member of the Michigan Hardware Dealers' Association is located and doing business, except to an exclusive Hardware dealer in such town or city, shall be considered as working against the interest of said Association; provided that nothing in this article shall be so construed as to prevent manufacturers or jobbers from selling to manufacturers in any town or city goods actually used in articles manufactured by them, nor from selling to railroad or transportation companies.

Article XIV: It shall be the duty of all members to make complaint to the investigating committee of said Association, in accordance with the provisions of Article 8, of any violation of Article 13, by any manufacturer or jobber. If the investigating or executive committee are unable to amicably adjust the grievance complained of, it shall then be the duty of the Secretary of this Association to notify all members of this Association of the facts in the case.

Article XV: Whenever any complaint has been entered against any manufacturer or jobber, charging a violation of the provisions of Article 13, it shall then become the duty of members of this Association to withhold his patronage from said manufacturer or jobber until all such complaints as aforesaid have been satisfactorily adjusted.

Wisconsin Hardware Association.

Editor Hardware: On December 8, 1896, a circular call was issued over the names of a large number of Hardwaremen in the various parts of Wisconsin, calling a meeting of those interested in the formation of a Hardware organization, to be composed of the dealers of this State. It was declared there that "the purpose of this meeting is to form a permanent organization, and to fix the time and select the place for holding the first annual meeting next summer." The response to this call was generous, and showed that the movement was one which deserved, and would receive, the generous and patriotic support of the dealers of the State.

On February 9, 1897, in response to this call, a preliminary meeting of Hardware dealers was held in Milwaukee, some forty retail merchants being present. The need of organized efforts for protection from the inroads of manufacturers and jobbers, and for the promotion of a general feeling of confidence, was fully recognized.

After the questions involved had been fully discussed, the following resolutions were adopted:

"*Resolved*, That we demand of manufacturers and jobbers that they confine the sale of their wares to regular dealers, and that each and every member of this Association pledge himself to use all reasonable efforts to enforce this demand.

"*Resolved*, That if any manufacturer or jobber furnish goods to any one not regularly engaged in the retail trade, the dealers affected shall report the same to the secretary, with affidavits or other proper proofs. The secretary shall then correspond with the offending manufacturer or jobber, and endeavor to adjust the matter, and in the event of a failure to so adjust a complaint, where the evidence is conclusive, the secretary shall report the facts in the case to the members of the Association.

"*Resolved*, That a cordial invitation is hereby extended to all legitimate and regular Hardware dealers to join with us in this Association, and that they send to the secretary the amount of dues for one year, and receive their certificate of membership."

The Wisconsin Hardware Association thus came into being, and commenced its first year of labor by the election of the following officers:

President: John Hughes, Fond du Lac.

Vice-President: Andrew Noll, Chilton.

Secretary: C. A. Peck, Berlin.

Treasurer: W. H. Hay, Oshkosh.

An executive committee was appointed, consisting of the officers above named, and in addition C. E. Dewey, Kenosha; D. W. Ramsey, Madison; and A. H. Sheldon, Janesville.

A constitution was adopted, declaring that the object of the Association should be "to promote the interests, and secure the friendly co-operation of Hardware dealers." It was further declared that "any person or firm who is engaged in the Hardware business, is in good standing, and carrying a general assortment of stock, may become a member of this Association by subscribing to the constitution, and paying the annual dues prescribed in the by-laws." Regular meetings of the Association were to be held on the first Wednesday in February of each year, or as often as might be designated by the Association.

Under this constitution, and governed by wishes for the best interests of the trade of the State, this Association has continued upon its way successfully, and is now in a most flourishing condition, with a membership of 161.

The semi-annual meeting for 1897, was held in Milwaukee on July 20th and 21st, and was one of exceeding interest.

A programme of exceptional merit was carried out, including the reading of papers by a number of the leading Hardwaremen of the State. A resolution was offered and unanimously adopted to the effect that "Any traveling Hardware salesman in this State shall be entitled to membership in this Association, without the payment of dues, and without the right to vote."

The annual meeting of 1898 was held at Milwaukee, on February 2d and 3d. There was a large attendance, and the enthusiasm of the members was such as to justify all that had been done in the past, and to promise a hearty and patriotic support in the future.

The reports of the president and the secretary showed that a great deal of work had been done during the year, all of which was of practical value to the organization. Very few complaints had been received against manufacing and jobbing houses, all of which had been harmoniously settled. A number of interesting papers were read, and the discussions which ensued were of practical value, suggesting many ideas for use of the members of the Association. The officers of the first year were unanimously re-elected.

We feel that our Association has already done a good work, which will result in benefit to the Hardware trade, not only of this State, but incidentally and indirectly to all who have business associations with our members.

C. A. Peck,

Berlin, Wis. Secretary Wisconsin Hardware Association.

Among the curious things to be seen in the Hardware stores nowadays are woven wire door mats for sale by the yard, foot or inch. It is only a few years since the manufacture of the woven wire mat was begun, but these mats have proved so effective as dirt catchers and so light and easily cleaned that their use has spread very rapidly. During the earlier years of their manufacture each mat was woven and finished separately. Now some of the manufacturers are weaving them in lengths of fifty feet, and in such a way that they will not ravel when they are cut. The mats are woven in different widths and done up in rolls like carpet.—*N. Y. Sun.*

A report of the Assistant Secretary of the United States Navy on fireproof material makes the recommendation that no wood at all be used on torpedo boats. The fireproofed wood which has been tried on some ships has, he states, a tendency to corrode steel with which it may be in contact. Further, the treatment weakens the wood and renders it hard to tool. Laid on decks it wears badly, and if subjected to constant wetting appears to lose its fireproof properties. From these considerations the Secretary recommends that the material shall not be used for decking, but thinks it has advantages for interior joiner work, which is less exposed to the action of the water.—*The Engineer, New York.*

NEW ENG. HARDWARE DEALERS' ASSO.

Editor Hardware: This Association was organized March 15, 1893. It is intended to include in its membership all responsible Hardware dealers, both wholesale and retail, throughout the New England States. The objects of the

EX-PRESIDENT D. FLETCHER BARBER.

Association are social intercourse, and the discussion of all matters of interest relative to the Hardware trade.

The meetings are held on the second Wednesdays of nine months of the year. The attendance has always been good, sixty-five members being the usual average. Subjects appertaining to the welfare of the Association have been fully discussed at the meetings and various ways have been devised and carried out which have benefited the members. At some of the meetings we have found it to our interest to engage musical and other talent to entertain us for a part of the evening. This arrangement has been heartily approved of by the Association.

In January, 1893, the Boston members of the Association, believing that a uniform system of prices on leading articles would be of great benefit to the trade, arranged a schedule of prices on several leading articles of Hardware, and asked all interested parties, either within or without the Association, to join them in making the movement a success. As a result, eighty-five parties representing the Hardware trade of Boston and vicinity, signed an agreement not to make sales to consumers at less prices than those mentioned in the schedule list, until notice shall have been received from the Association of a change, or changes, in rates.

The plan went into effect July 17, 1893. The schedule lists have been sent out monthly, or as often as the manufacturers change their prices. On the whole, this plan proved very satisfactory for several years, and every Hardware firm was benefited more or less—in fact one retail Hardwareman stated that he was enriched more than two hundred dollars in one year, on nails alone. This arrangement is still in vogue, although, during the past season, owing to various reasons, not so much has been done in that direction as heretofore.

Our membership continues about the same as in previous years, the depressed state of business in general being a sufficient reason that we do not increase to any extent in numbers, but undoubtedly as soon as trade revives, we shall be benefited in that respect.

The advantage of Hardware clubs cannot be overestimated. Aside from pecuniary gain, which, in itself is no small item, the fraternal relations between Hardwaremen are furthered by these periodical gatherings. Subjects are discussed and results are brought about which are decidedly beneficial in their influence upon the trade at large. Credits are looked after with sharper attention, and, as a happy consequence, "bad debts" are greatly reduced. The writer strongly advocates and recommends the formation of local Hardware clubs in all cities and larger towns.

The Association has been very fortunate in having popular presidents, as follows:

Hiram G. Janvrin, of M. C. Warren & Co., Boston, Mass.

Samuel H. Thompson, of the Thompson Hardware Co., Lowell, Mass.

D. Fletcher Barber, of Chandler & Barber, Boston, Mass.

Edward A. Loomis, of the Belcher & Loomis Hardware Co., Providence, R. I.

Officers elected for 1898 are as follows:

President: Edward A. Loomis, Providence, R. I.

First Vice-President: Charles E. Adams, Lowell, Mass.

Second Vice-President: Charles O. Tukey, Chelsea, Mass.

Third Vice President: Lewis W. Thompson, Woburn, Mass.

Secretary: James A. Farless, Boston, Mass.

Treasurer: James L. Work, Boston, Mass.

Directors: Hiram G. Janvrin, Boston; Myron H. Tarbox, Boston; Harry H. Hale, South Boston; John H. Sayward, Haverhill; Edgar H. Bowers, Needham; Arthur C. Lamson, Marlboro; John M. Fiske, Natick.

James A. Farless,
Secretary New England Hardware Dealers' Association.
Boston, Mass.

The armory at Newburgh, N. Y., is to be enlarged and improved, and when completed, will be one of the most convenient and complete company drill halls in the State. The drill hall is about 80 feet wide and 130 feet long. Among the contemplated improvements is the removing of the present wooden roof and replacing it with a new roof structure. The roof supports will consist of eleven steel trusses. These will be arranged to support the mezzanine floor where new lockers and equipment cases will be placed, and they will also support the visitors' gallery. The new roof, when completed, will be much lighter, and will give the interior of the building a more roomy and substantial appearance. The Berlin Iron Bridge Co., East Berlin, Conn., have the contract for furnishing and erecting the steel trusses, as well as the other iron work in the building, consisting of steel plates in the rifle pit, girders in the floor and walls, and other miscellaneous iron work.

The Russian government has decided to adopt the metric system. The United States and the British Empire will thus soon be the only important countries which have not adopted the decimal system of weights and measures.—*The Industrial World.*

National Association Retail Hardware Dealers.

Editor Hardware: I take this, my first opportunity, to reply to yours of the 23d inst, in which you request me to give a brief outline of the steps taken to form a National Association of retail Hardware dealers, some years since.

In response to a call published in the *Iron Age*, a meeting was held in Chicago, September 20, 1893 at which representatives were present from many of the States, among them being:

The Orr & Lockett Hardware Co., Chicago, Ill.
Kirk & Smith, New Castle, Pa.
A. T. Stebbins, Rochester, Minn.
Irving A. Sibley, South Bend, Ind.
Hodge & Homer Co., Chicago, Ill.
Pickett Hardware Co., Warren, Pa.
W. O. Leslie, Sharon, Pa
S. S. Bryan, Titusville, Pa.
Brinkmeyer Hardware Co., St. Louis, Mo.
S. J. Stebbins, Chicago, Ill.
Chandler & Barber, Boston, Mass.
M. C. Warren & Co., Boston, Mass.
H. M. Hornung, Waukesha, Wis.
Edwards & Chamberlin Hardware Co., Kalamazoo, Mich.
J. O. Barrett, Joliet, Ill.
G. & D. Rehn, Chicago, Ill.
Keene Bros. Hardware Co., Chicago, Ill.
Northwestern Hardware Co., St. Paul, Minn.
Calban & Lewis, Windsor, Mo., and others.

There were also many letters of encouragement from prominent dealers, who were unable to be present. As a result of the meeting, an organization was perfected, and called the National Retail Hardware Dealers' Association. The officers elected were as follows:

President: S. S. Bryan, Titusville, Pa.

Vice-Presidents: First, F. B. Orr, Chicago, Ill.; Second, Samuel McKnight, Allegheny, Pa.

Treasurer: Wm. T. Humes, Chicago, Ill.

Secretary: Hiram G. Janvrin, Boston, Mass.

Directors: Two years, C. M. Chamberlin, Kalamazoo, Mich.; B F. Homer, Chicago, Ill.; J. G. Brinkmeyer, St. St. Louis, Mo. One year, W. K. Morison, Minneapolis, Minn.; D. Fletcher Barber, Boston, Mass.; I. A. Sibley, South Bend, Ind.

There seemed to be a general feeling at the meeting, and throughout the country, at that time, of the need of such an association, and every one was enthusiastic. Circulars were sent by the secretary to every retail dealer in the United States. The membership fee was fixed at the nominal sum of $5, and all were asked to come in and help on the good work. But in spite of the enthusiasm, the low admission fee, and much time and labor, few could be induced to become members, and the Association never made any progress, the first meeting being also the last; a fact in the opinion of the writer, very much to be regretted.

In conclusion, I would say that I trust this synopsis may be of service to you, and that I am ready at any time to render such assistance as may be in my power to so valuable a paper as *Hardware*.

Yours very truly,
Hiram G. Janvrin,
Secretary National Retail Hardware Dealers' Association.
Boston, Mass.

The president of the above-named Association, writes us as follows:

Editor Hardware: Yours of the 25th received. It cannot be said that either the Western Pennsylvania Hardware Dealers' Association or the National Dealers' Association is in existence to-day. It is true that I had a very active connection with them in 1893, but I was from five to ten years ahead of the times. I see that a number of States are forming Hardware Dealers' Associations, and I predict a necessity for a National Association will soon appear. In both Associations some of the brightest and strongest men in the business were connected with them. Speaking for myself I would say that I would bid any new association a very hearty welcome, but I feel that I have done my duty and spent all the time and money that I care to, but I should be glad to be a member if any such organization should be formed.

Yours truly,
S. S. Bryan.
Titusville, Pa.

Kansas City Implement, Vehicle & Hardware Club.

Editor Hardware: As Kansas City is acknowledged to be the largest distributing point of agricultural implements in the world, it was thought fitting that the representatives of the different houses should form an association, meeting monthly for the purpose of a couple of social hours, and incidentally talking over matters that would be of interest to its members. In November, 1892, a general call was issued for a meeting of the different managers. This call met with favorable response, and the night of meeting found a well filled room of representative managers. A constitution and by-laws were adopted and officers elected for the ensuing year, with J. G. Stowe, president of the Stowe Implement Supply Co., as president; and D. B. Alderson, manager of Bradley, Wheeler & Co., secretary. At the next annual meeting, in 1893, Mr. Stowe was re elected president and Ira C. Hubbell, manager of Fairbanks, Morse & Co., secretary. At the annual meeting in 1894, Mr. Stowe was again re-elected president and O. V. Dodge, vice president of the Kansas City Hay Press Co., secretary. At the annual meeting in 1895, F. L. Kaufman, manager of Parlin & Orendorff Co., was elected president and O. V. Dodge re-elected secretary. At the annual meeting in 1896, F. E. Lally, manager of Crane Co., was elected president, and O. V. Dodge re-elected secretary. At the annual meeting in 1897, Geo. M. Moore manager of Kingman-Moore Implement Co., was elected president and O. V. Dodge re-elected secretary.

Meetings have been held monthly, except for summer vacations, and have been uniformly well attended. Many matters of interest to the members have been taken up and disposed of to their advantage and satisfaction.

Yours truly,
O. V. Dodge,
Secretary Kansas City Imp., Vehicle & Hardware Club.
Kansas City, Mo.

It is about 900 years since forks were invented. A princess was married to a prince of Venice: for the wedding breakfast she provided herself with a silver fork and a gold spoon. This set the fashion, and wealthy families soon provided themselves with like table furniture. The greatest excitement followed their introduction, and the church condemned the use of these articles, without which you would not be able to eat with comfort. It is said that it was 613 years later that the fork and spoon entered England.—*Exchange.*

The following is going the rounds of the press: "The country editor is a reliable encyclopedia. A subscriber sent him this quety recently: 'What ails my hens? Every morning I find one or more of them keeled over to rise no more.' The reply was:' The fowls are dead. It is an old complaint, and nothing can be done except to bury them.' "—*Lockhart, Minn., Phonograph.*

The Argentine government is about to purchase another warship of about 12,000 tons. It is to be bought in England. A Buenos Ayres paper says: "When we have this ship, we should like to know where we are going to keep it, as it will be bigger than either the *Garibaldi* or the *San Martin*, and we have no ports for either of these vessels." —*The Industrial World.*

WHAT HAS IT DONE FOR THE TRADE?

"What has your Association, or Club done for the moral, social and business interests of the trade it represents?" This is a question which was recently addressed by *Hardware* to a number of the presidents of the leading Hardware Associations of the country, and we take pleasure in submitting their responses herewith, knowing that there is a great deal of information of an interesting character contained therein:

ATTITUDE OF THE SOUTHERN JOBBERS.

Editor Hardware: As president of the Southern Hardware Jobbers' Association, it gives me much pleasure to contribute a short article on matters connected with the Southern Association, to assist in the celebration of the eighth anniversary of *Hardware*, which paper has in the past been of so much benefit in the dissemination of matters of interest and value to the Hardware trade.

The necessity of some organized opposition to combat with the many evils confronting the Hardware jobbing business, both internally and externally, was the prime cause of the formation of the Southern Hardware Jobbers' Association, as likewise has been the reason for the organization and continued existence in the United States and elsewhere, of the hundreds of associations in practically every line of business. The main objects sought by the few jobbers who first met in Nashville, Tenn., on September 30, 1891, for the purpose of organizing an association, are embodied in three clauses of our constitution, as follows:

First: A permanent organization of the Hardware jobbers of the South, for the purpose of promoting more intimate social relations among them, and consequently a more friendly feeling.

Second: To encourage and promote the commercial interest of the Hardware jobbers of the South in every way possible.

Third: To foster and encourage, through social intercourse and united effort, that which will inure to our mutual benefit.

How well we have succeeded is forcibly demonstrated by the growth and development of our Association, the number and character of our membership from year to year, and the inestimable benefits the jobbers have received from same, both collectively and individually. Space will not permit of details as to what our Association has accomplished, but a few results of our work can be briefly mentioned.

Competition, although the life of trade, was, previous to the organization of the Southern and later Hardware Associations, a bugbear to the conservative Hardware jobbers, but while competition in the South has really materially increased since the formation of the various associations, owing to the opening up of new territory by new railroads and better freight facilities in general, including, of course, more satisfactory freight classification, and also the friendly feeling brought about by the frequent meetings of our Hardware competitors. By the members of our Association meeting together at our annual meetings, as well as at our frequent committee meetings, ties of friendship have been formed that no business transaction can efface, and in consequence of this brotherly feeling, the many rumors that reach the jobbers, through their traveling salesmen, of cut prices and other seeming irregularities, are seldom considered, or, if believed, are often taken up with the offending jobber and the evil-minded, and in this manner, competition, both from local and distant jobbers, is relieved of its many terrors.

We have also been brought to a knowledge of what it costs to do business, realized the various matters constituting our expense accounts and have put in operation in our businesess many of the advanced business methods promulgated by some of our most progressive members, and from this knowledge we are able to estimate pretty closely from day to day what our business is actually doing, especially what the profits are averaging, and from this information we are enable to conduct our business more satisfactorily than was ever dreamed of before. Freight classification has not been overlooked by our transportation committees, neither have our manufacturers and grievance committees been idle, as they have kept in close touch with the manufacturers, and when it appears to them any manufacturer is deviating from the straight and narrow path, they endeavor to lead him back to the path of duty. There are still, perhaps, a few *advanced thinkers* who believe the jobber is a useless ornament between the manufacturer and retailer, but the history of the Southern Association has proven conclusively that the jobber has a sphere equally as important as the manufacturer or retailer, and our experience has further been that the manufacturer is willing and anxious to meet the jobber half way, and upon this common ground, arrangements can, and have been made, that have proven of great value to both jobber and manufacturer, as well as to the advantage of the retailer and consumer. However, we have studiously refrained from entering into any arrangements with the manufacturers or between ourselves whereby such arrangement could in any manner be termed a combination.

Our annual conventions may well be termed the "bone and sinew" of our Association work, as it is only by our members meeting together in friendship and interchanging ideas one with another, that the greatest good and the most satisfactory results can be obtained. We are also glad to state that our membership as a whole recognize the importance of these meetings, and are always in attendance unless providentially hindered. The eighth annual convention of the Southern Association will be held about the first of June, at which time we anticipate a most excellent meeting.

We are pushing forward, day by day, all matters having a tendency to better the conditions of the Hardware jobber, and can see no reason why our efforts will not be crowned with further success. The Hardware Associations, like the Hardware jobbers, cannot now be dispensed with, and the present and future prosperous condition of the jobbers will be but a reflection of the continued growth and development of the Hardware Associations.

Yours very truly,

G. W. BARNETT,

President Southern Hardware Jobbers' Association.

Montgomery, Ala.

WORK OF THE NEW YORK HARDWARE CLUB.

Editor Hardware: It would be a very difficult task to enumerate all the benefits which have accrued from the creation of the Hardware Club of New York. There were in this city, firms and individuals who had done business side by side with each other in the Hardware trade for many years, with a very slight acquaintance existing between the two, or an acquaintance which was based upon business opposition, and was therefore tinged with a certain amount of hostility and distrust. We knew all about each other in a general way, and were certainly acquainted with anything which could be said by one of us to the

Digitized by Google

business disadvantage of the other. But, in the great majority of cases there was little social or personal acquaintance, and not much of a desire in many cases for closer ties.

When the Hardware Club of New York was first suggested, there were some who doubted the success of the movement, even among those who were the most willing to lay aside all business animosities and join with their neighbors in an Association, which might be of mutual advantage and benefit. It is however, to the credit of the trade at large that almost from the first gathering together, all these feelings of doubt and business animosity disappeared, and the merchants and manufacturers who had been looking at each other with a certain tinge of doubt and mistrust, came together with a willingness to forget whatever may have been of an unpleasant nature in the past, and to make new bonds of personal and social faith and friendship.

The Hardware Club of New York has changed all this old order of things, and caused a new one of friendship and good fellowship to take its place. There is no member of our Club who cannot call to mind many instances wherein he has been directly benefited in a business way, by the acquaintances which this club has caused, extended and cemented. No one can visit the Club rooms during the hour for luncheon on any of the six business days of the week, without being impressed with the fact that there is something more than the mere ties of club membership which have drawn and held those present together. There is a feeling of hearty good will in the very atmosphere, and the little re-unions which occur from day to day are among the brightest spots in the memory of our business life.

I might go into many details as to the minor benefits which accrue to the members of the Club, but think that the broad statements made above cover the ground enterely. Suffice it to say, that there is not a member of the Hardware trade to-day connected with our great and successful club, who would listen for a moment to any proposition looking to its abrogation, or a return to its old condition of affairs. The spirit of harmony which prevails in the trade to-day, and which organizations of this character have brought about, is one which I believe is permanent, as I know it to be of benefit and good to all who come under its beneficent influence.

Respectfully yours,

Peter McCartee,

New York, N. Y. President Hardware Club of New York.

WHAT HAS OHIO DONE?

Editor Hardware: "What has the Ohio Hardware Association done for the trade it represents?"

Beyond all else, in its few years of annual coming together, it has brought into association men who should have known each other years ago; men who are among the best in the State; who have worked and labored as near neighbors without even the courtesy of a call, one upon the other, in all these years.

Had there been no other result than the social feature, I feel that I am voicing the entire membership, in saying it is worth to us all it cost in this alone. There have been, and there will be, other and larger resulting benefits as we gain in numbers, and the consequent strength that comes of union.

We were the pioneers in State associations, and take some credit in that other States are following in this, our effort, at the correction of existing wrongs. Basing themselves on the existence of these, many local ones have been formed throughout the States, and reports from these show good work done.

So early in its history, the question cannot be so pertinent—what *has* been done as what *can* be done. We need more membership; it is rapidly coming, and with the mighty strength that comes of union, when intelligently applied, almost anything can be asked, and granted, in correction of existing wrongs.

Our purposes are shown to the world in existing rules, by-laws and resolutions, and in every case have had the sanction of the better class of jobber and manufacturer, where presented to them.

We ask correction from the jobber, who, with a salesman in your office, has at the same time another salesman doing the pirate act among the trade you buy goods for. We have asked this in a number of instances, and have had recognition and correction.

We ask consideration from the maker of goods who has gone to the consumer, a wrong that has grown more rapidly than any other in latter years, and in several instances have had cheerful correction.

We are asking for protective laws at the hands of our legislators. At present we have in our State, neither laws of lien, of attachment, of garnishee nor judgment, that in reality protect. We feel that these will come, when asked for by a body of men, known as will be, the Ohio Hardware Association.

There are many of what may be called local benefits to be derived, that largely come from discussion, such as credits and collections, treatment of employees, the buying of goods, our relations with the traveling salesman, what line of goods may be handled most profitably, how to meet the department store, the various business methods of other merchants, and a hundred and one good things that do not always come to those who have no occasion to discuss matters with other men.

No one head contains it all; with many in association some good must come. I trust and believe your same question asked two years hence will require volumes to answer it. The Retail Hardware Association has come to stay. Their number grows in evidence each month. Their interests are mutual ones, and but a few years hence we will see every State in the union supporting one.

H. C. Wiseman,

Springfield, Ohio. President Ohio Hardware Association.

EASTERN TENNESSEE IN LINE.

Editor Hardware: Seeing that the jobbers of Hardware were organizing into strong associations all over the United States; that most of the manufacturers were in combination and trusts at that time notably the great nail trust—and that the jobbers were overstepping their bounds, and, in many instances, selling direct to consumers, a small number of Hardware firms assembled in Greenville, Tenn., a town famous as the home and last resting place of Andrew Johnson, and in June, 1895, organized the East Tennessee Retail Hardware Association. This Association, if not first, was among the very first, of the kind in the United States.

It was at first intended to embrace only the territory between Bristol and Knoxville, but at second meeting, in January, 1896, the trade from Knoxville to Chattanooga was invited to meet with the Association at Morristown, Tenn., at which time and place I first became a member of the Association.

With this prelude, will say that one of the most appreciated features, as well as beneficial ones, is its social feature. It has made us acquainted. Many of us having lived only a few miles apart, and having heard of each other for years, had never had the pleasure of personal acquaintance. This feature alone repays us for the time and small expense of the Association.

In our meetings various subjects are discussed, and much useful information obtained.

On various occasions the jobbers have been invited to meet with us, and discuss matters pertaining to our mutual interest, and many obstacles have been removed, that were injurious to our branch of trade.

It is the policy of our Association when it is discovered

Digitized by Google

that jobbers are selling direct to our customers, to report the same to the various members of the Association; also to inform each other in regard to persons who are not worthy of credit.

The East Tennessee Retail Hardware Association was first, by resolution, to offer $100 or more if necessary as its proportional part co-operating with other associations to test the validity of the great nail combine in the courts of the country.

At our last meeting resolutions were passed, and our secretary, Mr. E. T. Hall, of Cleveland, Tenn., was instructed to correspond with other associations, looking to the organization of a National Retail Hardware Association.

We cannot enumerate the many benefits we have derived —these are only a few. Suffice it to say that our membership grows at each meeting, and interest increases, and our organization is now a permanent one and stands ready at all times to co-operate with all other similar organizations, for all that is good and beneficial to the retail trade.

Our next meeting will be at Rogersville, Tenn., in July, at which time we expect an increase of membership and one of the best meetings we have ever had.

Respectfully,

JNO W. BAYLESS,

President East Tennessee Retail Hardware Association.

Athens, Tenn.

A LUSTY INFANT.

Editor Hardware: The North Dakota Retail Hardware Association being organized last fall, is only in its infancy, but for the length of time it has been in existence, the progress has been rapid and beneficial. The membership, which is rapidly increasing, consists of about four-fifths of the dealers of the State, who are earnest workers for the aims of the Association.

Socially, the meetings have been very pleasant, bringing together new interests in similar objects, and making friends and a fraternal feeling where no acquaintance has heretofore existed.

In a moral and business sense, we are bound to progress, for the best methods of transacting business and improving trade are gained by association, better than by any other method.

Business protection, which is our first aim, has already been felt in many instances, and as our strength increases, so will this protection.

The Association has a bright future in prospect, and, with the continuance of the ambition and work for the success of the Association, we are bound to win.

Respectfully,

CLARK W. KELLEY,

President North Dakota Hardware Association.

Devil's Lake, N. Dak.

THEY PAY IN NEW ENGLAND.

Editor Hardware: Your question as to the usefulness of the New England Iron & Hardware Association to its members, may be summed up in three classes, or chapters, which comprise our Membership, Shelf Hardware, Heavy Hardware and Metal Branch.

The Shelf Department eat, drink, and some of them did sleep together, under the compulsion of the late blizzard, which prevented their home going on the night of our annual banquet of 1898, and since that experience, have been investigating the ways and means in force among the members of the Pacific Coast Association.

The Heavy Hardware Branch have no time to eat or drink, they are making money so rapidly; in fact, use up so much time that their Shelf Hardware brethren stand amazed and look on.

The Metal people had their organization many years before our Association was in existence, and their quiet, methodical ways are worthy of emulation in any body of business men.

The future looks bright, and we hope to send a good report to many future anniversary occasions of *Hardware*.

With kind regards, I remain, yours very truly,

L. C. CARTER,

President New England Iron & Hardware Asso.

Boston, Mass.

FEEL ITS GOOD EFFECTS.

Editor Hardware: There is not much to say, as yet, in answer to your question: "What has your Hardware Association done for the trade it represents?"

Organized Jannary 13, 1898, the Eastern New York & Vermont Hardware & Iron Association is still in its infancy. Notwithstanding this fact, we already feel its good effects.

Socially, by bringing together a class of honorable men, trusted by all, "except themselves," teaching them to have confidence in one another, and making of them friends as well as competitors.

In a business way, by establishing uniform prices, which do justice to both dealer and consumer, making the transaction of our everyday business very much more pleasant.

At the present time we are doing everything possible to strengthen our organization, and hope in the near future to number among its members every Hardware and iron dealer within the limits of our territory.

Yours very truly,

JAMES L. DUNN,

President Eastern New York & Vermont Hardware & Iron Association.

Troy, N. Y.

ALSO IN KANSAS CITY.

Editor Hardware: Answering yours of the 9th, asking: "What has your Hardware Association done for the trade it represents?" would say that our Association, as its name implies, is not distinctly an association of the Hardware trade here, but also the implement and vehicle trade.

While our Association has not accomplished all that its members have hoped for, it has been the means of promoting an acquaintance and sociability among the members, and, by a united effort, has succeeded in correcting, or at least modifying, some of the many abuses in the trade on lines represented.

The field is large, and the benefits to be derived by co-operation many, and by a proper disposition to stand together on matters of common interest, much good can be accomplished. We are firm believers in such organizations, but to be a success, the members must be true to one another, which we are sorry to state is too often not the case.

Yours respectfully,

GEO. M. MOORE,

Pres't Kansas City Implement, Vehicle & Hardware Club.

Kansas City, Mo.

HAVE ACCOMPLISHED SOMETHING.

Editor Hardware: Replying to your favor of March 16th, in reference to the Texas Hardware Jobbers' Association, our worthy secretary will give you all the detailed information you desire. He can do this better than I can, since he has kept the record of the Association from its organization. Our State organization has been in existence some two years, and the principal mover in securing the Association of the jobbing Hardware houses of Texas, was its present secretary, R. F. Bell. The organization at present comprises practically all the Hardware jobbing houses of Texas, and while we cannot claim to have accomplished much in a material way so far, our meetings have brought on a better feeling between the members of the trade, and has been productive of much good in that way. On account of our peculiar location, subject to conditions that do not exist in other parts of the country, it will require a long and united effort on our part to bring about the desired improvements that we hope to accomplish. I believe however, that by perseverance, and intelligent and conservative action on our part, we will soon be able to demon-

Digitized by Google

strate that it was wise for us to organize, and desirable that the organization should continue.

Yours respectfully,

Jas. Moroney,

President Texas Hardware Jobbers' Association.

Dallas, Texas.

THE RESULTS IN SPRINGFIELD.

Editor Hardware: Our Hardware Social Club has now been in existence for about four years. We started purely as a social organization, to know each other better, compare notes and general business ideas, principles and credits. We have accomplished what many of our members considered impossible facts; have steadily grown and maintained our organization, and our meetings are looked forward to with pleasure, always calling out each and every member. We exchange ideas freely and pleasantly, do not now hesitate to ask questions and seek information freely, and in so doing cement and cultivate good feeling and settle any little differences, of whatever character or nature, that may come up.

We are glad that we exist and meet together. We look after our credits closely, and scan closely our experiences. We are simply a retail association and cover all dealers in this vicinity. Our organization is conservative, careful and well managed. We try to live and let live. Wishing you our hearty and cordial sympathy in your coming anniversary, Yours very truly,

F. D. Foot,

President Springfield Hardware Social Club.

Springfield, Mass.

HAS DONE US MUCH GOOD.

Editor Hardware: In answer to your question, will say briefly, as probably most of your correspondents have said, that our Association has made us personally acquainted and personal friends. It has diminished ruinous competition, and there are fewer dissatisfied customers and annoying shoppers. It has given us useful information, and lightened the labors of business. It has brought us larger profits, better consciences and a finer sense of honor. And it is a stimulus for attention to business, and greater exertions, to meet the requirements of the times and the increasing population of the country.

Yours sincerely,

Wm. Francis,

President of the Hartford Hardware Association.

Hartford, Conn.

A Madrid cablegram states on the authority of a Spanish newspaper that the last two descendants of Christopher Columbus are now loaded with chains and are imprisoned in a foul dungeon at Cadiz. There seems to be a sort of hereditary as well as historic fitness in the fact that the last descendants of the discoverer of America should be thus closing their lives, while the feeble survival of the once powerful Spanish empire is hastening toward bankruptcy in a vain effort to retain one small island out of its former vast possessions in the Western hemisphere. After discovering the new world Columbus was seized by the Spaniards and thrown into prison where he died an inglorious death wearing the galling chains of Spanish gratitude.—*Stoves and Hardware Reporter.*

It is stated that for the year just ended the total output of Singer sewing-machine needles at the Kilbowie factory exceeded all previous records. It reached the enormous total of 35½ millions, weighing 16 tons 12 cwt. If placed end to end the need es would extend to several hundred miles.—*Ironmongery.*

Hot air is a good conductor of electricity, but an electrified body placed near a flame soon loses its power of attraction.

Miscellaneous Associations.

There are, of course, a large number of Associations of a general character which are identified with the Hardware trade, but they are not sufficiently so to bring them within the scope of the present Association number; or are so nearly allied to business combinations, that they do not go under the head of Associations which are created and held together by ties of a social nature. Among these may be mentioned the Merchants' Association of New York; National Association of Manufacturers; the Commercial Travelers' Home Association; the various bicycle organizations which have given the expositions at Madison Square Garden, from year to year; the Sportsmans' Exposition, whose annual events at the Garden are also regarded as among the events of the year; the union of Vapor Stove men, and other stove Associations, etc., etc. These organizations are all important in their way, and valuable adjuncts to the trade, but as we said above, do not come under the purpose of the present number, and therefore a detailed mention of the same would not be fitting to the occasion.

Decision in Favor of R. Heinisch's Sons Co.

R. Heinisch's Sons Co., Newark, N. J., announce that in their suit against Hermann Boker & Co , of New York City, to restrain them from the use of their trade mark on shears, a decision has been rendered in the United States Circuit Court for the Southern district of New York in favor of the plaintiffs. The decision declares that "the complainant is entitled to an accounting, and to an injunction restraining the use of names 'Heinisch' or H. C. 'Heinisch' on its shears, labels, postal cards, and otherwise in any way, which will interfere with complainant's enjoyment of the benefits of its trade-name." R. Heinisch's Sons Co. add that in view of this decision, "We would respectfully state our firm determination to protect all our rights in the premises. All persons found selling shears bearing any imitation of our trade-name will be held strictly accountable for their acts."

The Heavy Hardware Jobbers' Association.

This is a Hardware Association which has been described as "purely a mutual affair," and therefore one in which the public has but little interest. Annual meetings are held each year, where subjects of interest to the dealers in heavy Hardware are discussed. The present officers are: President, W. B. Dean, St. Paul, Minn ; first vice-president, Robert Donahue, Burlington, Iowa; second vicedent, Gaius Paddock, St. Louis, Mo.; third vice-president, F. K. Maus, Chicago, Ill.; secretary and treasurer, W. C. Brown, Chicago, Ill.

Following a discussion which recently arose in Kanturk in trade circles as to the length of time it would take to make two sets of horseshoes, Mr. William D. Buckley, a local ironworker, made a wager for £5 that he would make the required sets inside of 25 minutes. The wager was accepted, the conditions being that the iron used should be 1⅛ inch ⅝ inch horseshoeing iron, each shoe to be fully furrowed, punctured, and finished to the satisfaction of the judges, two well-known blacksmiths. As the result of the test the two sets were satisfactorily completed in 23 minutes 36 seconds, Mr. Buckley winning the wager amid great applause.—*Ironmongers' Chronicle.*

Steel which has rusted can be cleaned by brushing with a paste compound of one-half ounce of cyanide potassium one-half ounce castile soap, one ounce whiting, and water sufficient to form a paste. The steel should first be washed with a solution of one half ounce cyanide potassium in two ounces water.—*Industrial World.*

THEY BELIEVE IN ASSOCIATIONS.

A brief note was sent by *Hardware*, after the announcement of our Hardware Association Special Number of April 10th, to a number of leading Hardwaremen of the country, in which was contained this question: "Do you believe in Hardware Associations, and, if so, Why?"

These gentlemen were asked to state, within a very few words, the reason for such faith as they might have within them, concerning the good work being done by the Associations within the trade. The responses have been many, and, without exception, are favorable to the creation and continuation of these great organizations. We take pleasure in reproducing the same herewith:

John H. Robbins, Baldwin, Robbins & Co., Boston, Mass.: I am a firm believer in Hardware Associations which, in my opinion, not only afford an opportunity for better acquaintance with your competitors, but prove a healthy stimulus by personal contact. Many agreeable friendships are formed, ideas interchanged, and views which heretofore may have been considered conservative, are materially broadened.

Theodore D. Buhl, Buhl Sons & Co., Detroit, Mich.: You ask me if I believe in Hardware Associations. I do. You also ask why. Because they broaden a man to associate with other men in business. He gains information, which makes him a better merchant and fairer competitor. He finds out others in trade are aiming for the same ends he is striving for, and are really not such bad fellows as he had thought them to be. It inspires new energy, life, vigor and knowledge to prosecute his own business.

Wm. Quincy Wales, Brown & Wales, Boston, Mass.: Answering yours, I would reply as follows:

"Do I believe in Hardware Associations?" Yes, I do, because I think that success in business is much more surely obtained by united action along certain lines than by sharp and unreasonable competition, which does no one good and often causes much ill feeling. I would rather have a competitor with whom I am on good terms socially, than one who looks upon me as an enemy. Life is too short to spend any portion of it, if it can be avoided, in doing business without profit because a man thinks his brother merchant is trying to drive him out of business by selling below a fair margin over cost.

R. R. Williams, Hardware editor *The Iron Age*, New York: The matter of Hardware organization is, as you know, one to which *The Iron Age* has given special attention from the inception of the movement, which within a few years has assumed a new significance from the identification with it of the retail trade. Jobbers have long been well represented by their several associations, and it is now desirable that the retail trade generally, who have much to gain from concerted action, should organize for the protection and advancement of their interests. Retail Hardware associations should be formed without delay in every State, and as soon as possible a national association representing the interests of retail Hardware merchants throughout the country.

H. H. Bishop, McIntosh-Huntington Co., Cleveland, Ohio: I believe in associations amongst competitors, whether manufacturers, wholesalers or retailers, because the effect is to produce harmonious feeling, better acquaintance, improved business methods and general good fellowship which are impossible without.

Henry R. Towne, president Yale & Towne Mfg. Co., New York: We believe in Hardware associations because they benefit the Hardware trade. Anything which broadly benefits the trade, tends ultimately to benefit the manufacturer. Unregulated competition has become increasingly detrimental and, unless checked, tends to the ultimate elimination of profits. In many lines of trade a harmonious adjustment of interests previously opposed, has superseded the former competitive conditions which had operated to render business unprofitable. Experience has shown that these later methods can successfully be utilized in the Hardware trade, and we predict their extension, both in jobbing and retail lines. Where wisely organized they have our cordial support.

E. C. Miller, Magnolia Metal Co., New York: Disraeli once said that "the man who is best posted in any given department of life is best prepared for success in it." This will illustrate the advantage to Hardwaremen of having membership in Hardware associations.

Olney Arnold II, American Screw Co,, Providence, R. I.: Permit me to congratulate *Hardware* upon the completion of eight successful years, giving the promise of equal good work for itself and the trade in the future. My personal experience in connection with Hardware associations has been slight, mainly devoted to accepting their hospitalities upon feast days. I believe, however, in trade and industrial associations upon the general ground that in more or less frequent communication with competitors, lies the ability to take a liberal view of business affairs.

Griff D. Palmer, Weaver, Palmer & Richmond, Rochester, N. Y.: It is with genuine pleasure that I notice you intend publishing on your anniversary day a Hardware association number. I am a thorough believer in Hardware associations, having the honor of belonging to one of the oldest now in existence. We have demonstrated in our New York State Hardware Jobbers' Association that it is possible, while we still remain competitors and rivals in the sense, to be warm personal friends. The socialties in our association are certainly worth as much to us as some fat bank accounts. We have never tried in our association to regulate prices or make any arbitrary rules. We have tried to build up, and have succeeded, a thorough, mutual good understanding and good hearty fellowship in our membership.

John Bindley, Bindley Hardware Co., Pittsburg, Pa.: Do you believe in Hardware Associations?

I believe in Hardware Associations, if formed from proper motives, and conducted in true fraternal spirit. They of necessity must be productive of good results to the trade.

Why?

The present advanced business conditions have demonstrated that old methods and exclusiveness produce the inevitable result of failure. Associations should not eliminate but regulate competition. In this day business competition without regulation means annihilation, thus the association regulates, controls and becomes the channel through which all well conducted establishments may be successful.

R. W. Shapleigh, A. F. Shapleigh Hardware Co., St. Louis, Mo.: You ask me to tell you why I believe in Hardware Associations. Briefly, because I think the time has arrived in the conduct of the jobbing Hardware business when the jobbers should understand that their prosperity

Digitized by Google

depends on their working together, not so much in the matter of prices on goods, as in the general conduct of their business, and the elimination of many pernicious practices that have generally crept into it; this can only be accomplished by the interchanging of ideas by dealers from different sections of the country, and the adoption of improved and higher standards of business methods. This can only be brought about by getting together, knowing each other personally, and all striving together for an improvement in aims and methods.

J. A. Warner, Wyeth Hardware & Mfg. Co., St. Joseph, Mo.: To one who has attended the meetings of the National Hardware Association, and also been identified with a local organization for several years, your question "Do we believe in Hardware Associations?" would seem superfluous. I take it that you do not expect a long article on the subject from any one person, and as the matter will probably be considered in all its different aspects in the replies which you will receive, I shall only refer to one phase of it. I believe in Hardware Associations because they make friends of competition in business. What this means can probably be better appreciated by those who are fortunate enough to belong to a local organization, for it is in such organizations that the benefits are most apparent. If the discussion of this subject through the medium of your valued paper will result in the formation of new associations, both of jobber and retailer, you will deserve much credit.

J. W. Black, Burhans & Black Co., Syracuse, N.Y.: In reply to your question, "Do you believe in Hardware Associations, and why?" I believe in them, for the reason that they do much good. I have never attended an Association meeting that I did not learn something. No matter how bright a man may be, there are others who know more on some particular subject than himself. There are many discussions of interest which are advantageous to every member. They make people broad-minded; they keep them from getting into a rut. They obliterate many existing evils in business methods. "In union there is strength." There are advantages too numerous to mention.

A. B. Palmer, Palmer Hardware Co., Savannah, Ga; Do I believe in Hardware Associations? Most emphatically: Yes. Why? Because in union there is strength. Because of the fraternal feeling that is bound to exist among the members at least once a year, if not all the year. Because of the opportunity to obtain new ideas and methods of business. Because they are the means of your meeting with your competitors socially, and of finding out that they are just as good fellows as you are, *and lots smarter* than you thought yourself to be!

John Stollberg, Stollberg & Clapp Co., Toledo, Ohio: "Do I believe in Hardware Associations?" I emphatically say: Yes. The reasons for this are manifold. In the first place, the simple fact of meeting your competitor (or at least one whom you supposed was your competitor), and after meeting, becomes a friend of yours and your ally. Second: The old saying "That in unity there is strength" is always a great factor in Associations. Third: Hardware Associations can be used to good advantage in doing away with abuses in trade. Fourth: The meeting of at least once a year of Hardware Associations both National and State, give chances to learn how other people than yourself are doing business, and is a very good school for advanced ideas. There are a great many more reasons why I believe in Hardware Associations, but not wishing to make too long a plea for them, I close by advising all, both jobbers and dealers, to meet frequently with one another.

Logan-Gregg Hardware Co., Pittsburg, Pa.: Yes, we do believe in Hardware Associations, and show our faith by our works, as we belong to the local and general jobbers' Association. Associations broaden ideas; soften asperities toward our competitors; afford opportunity to speak as a body to the parties from whom we buy, and to correct bad practices which grow up among the members. Well managed, they are very useful; badly managed, they are useless.

D. G. Fones, Fones Bros. Hardware Co., Little Rock, Ark.: We believe in Hardware Associations both national and local. As it is, through the mingling of the members of these associations, much good is accomplished, and many little differences that would come up between jobbers in the same section, are smoothed away, and the personal acquaintance of the jobbers is not only to the advantage of themselves, but also to their trade. We do not approve of the association for the purpose of combination of prices between jobbers, nor to force manufacturers to sell their goods for less than value, but as stated above, we believe that these associations are to the mutual benefit and advantage of the manufacturer, jobber, retailer and consumer. Organizations of this character will accomplish results that are benefical to every one in the Hardware trade. My policy is to continue them.

H. C. Marshall, Marshall-Wells Hardware Co., Duluth, Minn.: We believe in Hardware Associations for the following reasons: Fancied wrongs, misrepresentations and misunderstandings are more easily adjusted through such a medium. We learn that there are two sides to every question. Five minutes of consultation will often accomplish more than a lengthy correspondence. A disposition to respect the opinion and welfare of others is developed. We learn that our competitors have the same desire for the common good, and are willing to meet us half way in adjusting the differences that arise where competition exists.

D A. Dangler, Dangler Stove & Mfg. Co., Cleveland, Ohio: Yours of the 28th just received, in which you ask me whether I believe in Hardware Associations. I am a strong believer in such associations. From an experience of fifteen years in a Vapor Stove Manufacturers' Association, I have learned to appreciate the value of such organizations, in bringing the different elements into one harmonious whole. The result of my experience has clearly demonstrated the inestimable value of the representatives of the various branches of manufactures or mercantile enterprises to form associations or organizations in their various branches, as it tends to broaden our ideas in business and business methods; and at the same time tends to develop a higher appreciation of each other. There is power and force in harmony and union, which such organizations promote.

J. Robert Rainey, Tabb & Jenkins Hardware Co., Baltimore, Md.: Any movement having for its object the betterment of existing conditions is to be commended. Whether that movement be moral or social, political or commercial, it should be encouraged. Coeval with the fall of man, came the knowledge of evil, and with that knowledge he received the curative property of resistance. Into the Hardware trade have crept evils, external and internal—germs caught from without and generated from within—ills acquired and ills hereditary. Slow of growth, they have become so sturdy and deep rooted that ordinary measures can no longer be used to eradicate them. Champions in different sections sought by individual efforts to overcome these evils, and failed. Now banded into associations, local and national, they seek by concerted action to bring forth good results. Much good has already been accomplished and yet much more remains to be done. As long as these organizations keep true to the cause that called them into being, they will be a power for good. Working in harmony, rivals in trade meet on a common ground of mutual interest. They learn to know one another as never before; selfishness melts in the crucible of

Digitized by Google

fraternity. That they may continue to prosper under wise leadership is our sincere wish.

Samuel A. Bigelow, Bigelow & Dowse Co., Boston, Mass.: *Do* I believe in Hardware Associations? Indeed, I do, and most heartily. My belief is based on organization and association as being absolutely necessary to a successful conduct of any branch of trade. Merchants in every line need to be organized; not only locally, but they should have national associations. National associations seould combine and establish a Central National Association, to have its headquarters at the national Capital. Its duty should be to fight for the rights of the merchants of the whole country, until they receive proper recognition, which their enormous interests and capital should command.

T. G. Walther, C. W. Hackett Hardware Co., St. Paul, Minn.: "Why should all Hardware dealers join an association?" is a question often asked, and the answer is easy. Because they will gain by it, both in money and wisdom. By coming in contact with their neighbors, competitors and others in the same line of business, they cannot but gain by getting ideas, and give by telling some of their own. Surely, the man who has ever attended a gathering of dealers in the Hardware line, must be dense indeed if he does not come away from such a meeting with his head full of valuable and practical ideas.

W. H. Kalbach, Huber & Kalbach Co., Oskaloosa, Iowa: You ask me, "Do I believe in Hardware associations, and why?" In reply would say that I am a firm believer in Hardware associations, and my reason: I have watched the direct good results from them. No one can interest himself in these associations in good faith, without being benefited by them, and coming in contact with good, live business men, who, as a rule, are members, thereby gaining information and new ideas that are sure to be a benefit to him in business.

L. C. Empkie, Empkie-Shugart Co., Council Bluffs, Iowa: I heartily approve of Hardware associations, as, to my mind, they are and have been a great promoter for good, and are doing much to establish good fellowship among the trade, by giving an opportunity for its members to mingle with each other. This feature ought to be encouraged.

James D. Foot, Kearney & Foot Co., New York: Your communication in *Hardware* of the 10th inst., comes at an opportune time, and should command the interest not only of the Hardware merchants, connected with the various Hardware Associations, but is also of interest to manufacturers, distributing goods to the Hardware trade. Hardware associations not only cement the trade in bonds of mutual interest, but through their meetings and as a result of them, bring the trade in closer and more harmonious touch with the manufacturers. Results already obtained will fully warrant the above statement.

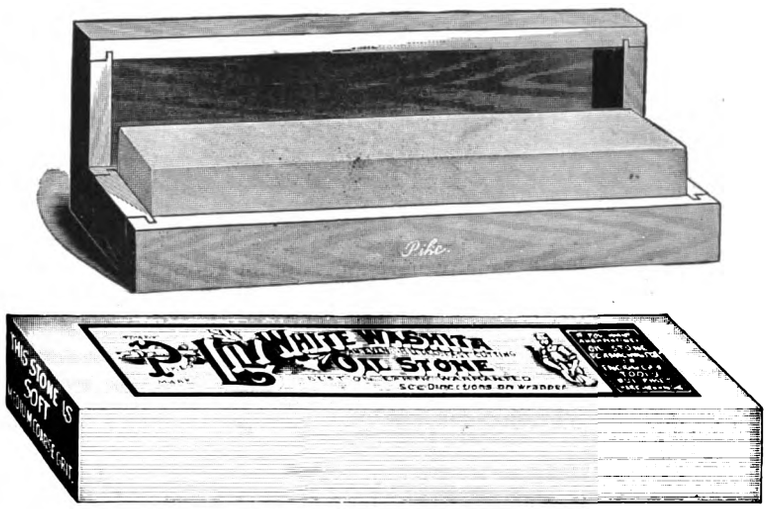
George E. King, King Hardware Co., Atlanta, Ga.: Yes, I am very much in favor of Hardware Associations, because they promote good feelings, and very often prevent misunderstandings that might keep competitors far apart, and, as a matter of fact, beyond al things, competitors should be friends. Further, one hundred large firms by acting in concert in any one direction, can do much more to dispel trade abuses, than if the jobbers were to undertake it single-handed.

Edward W. Morley, Morley Bros., Saginaw, Mich.: We believe in Hardware Associations for the following reasons: We would first say, that we do not believe in associations making or agreeing on prices, but we do think that meeting together and talking over the best ways to conduct business, produce good results for all. The most important thing, we think, is for the association to let all the members know that it costs something to do business, and that these fixed charges must be met before any profit can be seen, and when every merchant is fully impressed with the fact that it costs money to do business, one great step is taken towards successful results. We have been surprised at a number of meetings of Hardware Associations, that there were so many members who did not know what it cost to do business, but after they got that information, they marked their goods accordingly, and became more successful. A Hardware Association that shows its members the per cent. on the sales that it costs to do business, solves a great problem, for when a merchant knows what per cent. it costs on his sales, to do business he knows on every transaction he enters into just how much he makes or loses. If every merchant knew the per cent. it costs on his sales to do business, there would be less cutting, and competition would grow less. We think the great trouble is that too many merchants do not know what it costs them to do business, but a number of Hardware Associations, of which we have been members, have done good work in showing the members what it costs to do business, and other wholesome business methods. To conclude: We believe that the more Hardware Associations we have in the country, the more friendly the relations will be among all dealers, the greater the improvement in business methods that are established, and that each member will find that his brother member is not as bad an individual as he imagined, before meeting together from time to time.

W. E. Gibbins, Woodruff Hardware Co., Knoxville, Tenn.: We are advocates of Hardware Associations and are members of both the Southern and the National. Some member of our firm attends all the annual meetings, as the full benefit cannot be obtained unless this is done. Some of our reasons for belonging to these Associations are as follows: At the annual meetings we come in contact, and get acquainted, with the individuals in our line of trade from all sections of the country; these acquaintances often ripen into friendship, and have a good effect on competition between members who operate in the same territory, and an interchange of business methods teaches valuable lessons, and we adopt many of them in our business with great benefit and profit. We could give many more reasons if space would allow.

Geo. A. Braun, Bostwick-Braun Co., Toledo, Ohio: You ask me the question, "Do I believe in Hardware Associations—and why?" My reply is: I certainly do, for the reason that by meeting a competitor—let him be a retailer or jobber—one soon learns that, as a rule, he is not the meanest man on earth, and by exchanging ideas, the nearer correct methods of doing business are reached; and if members of Hardware Associations are honorable and sincere in their work, and ready to extend a reasonable amount of confidence in each other, many abuses in trade and unreasonable competition can be eradicated.

H. L. Kennedy, Syracuse Hardware & Iron Co., Syracuse, N. Y.: That the meeting together and organizing of individuals engaged in the same lines of trade is advantageous and beneficial, is best answered in the growing strength and number of Hardware Associations, all of which are of comparatively recent creation. The kindly spirit exercised one toward another, the confidence instilled, and the solving of vexatious problems for mutual benefit, are fruits that speak for themselves.



There are business men who think if they can get an advertisement inserted in a journal which takes them at any price, they have scored a point in economy. Experience will show them their folly, and then, perhaps, they may be glad to expend a little more with another journal, so as to have their announcements properly brought before the classes they wish to reach.—*Ironmongery.*

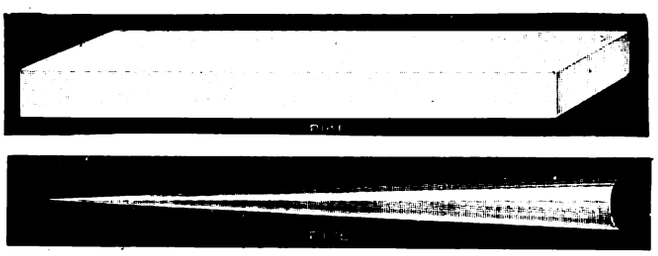
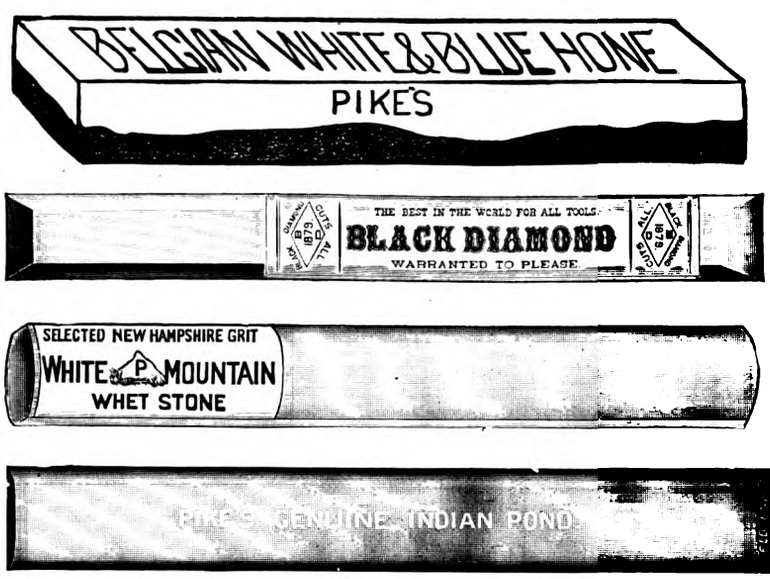
A DULL TOOL IS USELESS!

A Poor Whetstone may make it worse, may ruin it!

MORAL—Use care in selecting and recommending Whetstones.



PIKE'S LILY WHITE WASHITA OILSTONE



Is the choice of the best mechanics the world over for carpenters' and similar tools. It has no rival. Made in bench stones, in round edge beveled slips, and mounted in polished wood boxes. **Every stone warranted.**

PIKE'S

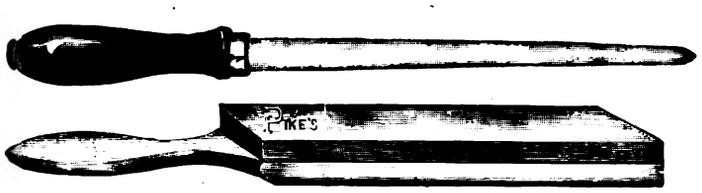
Genuine Arkansas Oilstone

Cannot be equaled for tools requiring a very fine edge, such as used by Engravers, Jewelers, Machinists, Cutlers, Etc.

PIKE'S

Imported Belgian Razor Hones and German Water Hones

Are from the best quarries in Europe. The most uniform in quality.



PIKE'S

Black Diamond, White Mountain & Indian Pond SCYTHESTONES

Are the World's Scythe Sharpeners. Won't Glaze—Don't Break—Do Sell.

Pike's Natural Grit Carving Knife Hone,
A boon to all wielders of the carving knife

Pike's Quick Edge Pocket Knife Hone,
A great little sharpener for pocket knives, ink erasers, scissors etc

Send for 64 page Illustrated Catalogue and Desk-stone Paperweight Free

THE MANUFACTURE OF WHETSTONES

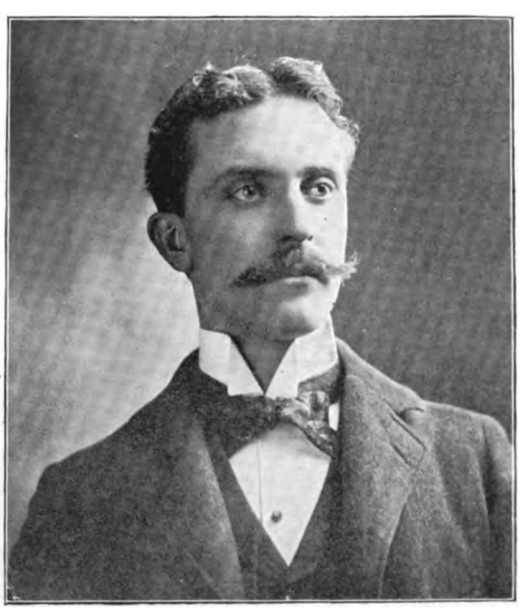
The word "Whetstone" is applied in its broadest sense to any stone used for abrading or sharpening purposes It occurs once, at least, in the Bible, and quite frequently in ancient histories. Among the discoveries of crude tools and implements used by pre-historic races, even back to the Cave men, have been occasional pieces of stone that

E. B. PIKE, PREST. PIKE MFG. CO.

evidently were used for sharpening implements of metal, bone and stone.

The vast increase in the variety of edge tools, both for hand and machine use, attendant upon the wonderful industrial progress of the last century, has made necessary the production of sharpening stones in many shapes and sizes, and of many varieties of texture or "grit."

In Europe quite largely, and to a limited extent in this country, the manufacture of artificial stones from crushed emery, quartz sand and siliceous deposits has been carried on for some time; but although stones of some abrasive properties can be produced in this manner at less cost than those manufactured from the natural rock, they never have been, and never can be, as satisfactory or efficient as natural stones of suitable grit. The reason for this is readily apparent when it is understood that the sharpening qualities of a whetstone are due entirely to the sharp points or "facets" of its crystals, and the openness and uniformity of the minute pores between these crystals. In the artificial stone, which is made from a powdered material, moulded and shaped by great pressure, these crystal points are broken, and the pores filled up with glue or other "binding" material, so that after little usage the so-called stone becomes glazed and is practically useless.



In the early days of the present century (about 1815) the first American-made whetstones were quarried in the town of Cummington, Hampshire County, Massachusetts, famous as the birth-place of one of America's greatest poets.

These stones were used for "whetting" scythes, and were taken from a vein, or lead, of mica-schistose sand stone, which can be traced in a south-westerly direction from northern Vermont to the southern part of Connecticut. A few years later an outcropping of this same lead was discovered in Grafton County, New Hampshire. The quality of the stone at this point was even better for scythe stones than that in Massachusetts, being a little sharper in grit, and freer from flint, iron and other foreign substance. The first quarry opened was located on the shore of a small lake known as "Indian Pond," and when Isaac Pike began manufacturing this rock into scythestones in 1823, he called them Indian Pond scythe stones. A little later he painted the ends of his stone red to distinguish them from imitations (labels being unknown in those days), and from that day to this the stones from this famous quarry, or rather chain of quarries, have been known as Pike's Indian Pond Red Ends.

In this manner was founded the business of the Pike Mfg. Co., of Pike Station, N. H., and New York City, recognized to-day as the largest manufacturer in the world of sharpening stones exclusively.

The direct successor to Isaac Pike, upon his death in 1860, was his second son, Alonzo F. Pike, who was joined in later years by the youngest son, Edwin B. Pike, president of the present company. In 1882, Alonzo F. Pike was succeeded by the A. F. Pike Mfg. Co., with A. F. Pike, president; E. B. Pike, vice president, and Isaac Pike, Jr., treasurer. This company, in turn, was succeeded in 1889 by the Pike Mfg. Co,, the present officers of which are: E. B. Pike, president; James Nicholl, vice president, and E. Bertram Pike, treasurer, the latter representing the third generation of the family in this business.

The Pike Mfg. Co. are operating quarries and factories in various parts of the United States, the principal ones be-

E. BERTRAM PIKE, TREASURER.

ing in Orleans County, Vermont, where the celebrated Black Diamond, Lamoille and Green Mountain scythestones are turned out; Pike Station, Grafton County, New Hampshire, the home of the widely-known Indian Pond and White Mountain scythestones, and Hot Springs, Garland County, Arkansas, where, in the spurs of the Ozark

Digitized by Google

Mountains, a deposit of Novaculite is found from which are made the two chief oilstones of the world, the Washita and the Arkansas. This oilstone rock is shipped mostly in the rough to a factory operated by the Pike Mfg. Co., at Manlius, Onondaga County, New York, this being a central point for distribution of the finished goods. Two years ago the company built an oilstone factory in the city of Hot Springs, and eventually, when railroad facilities are greater, will doubtless manufacture a larger portion of the output at that point.

The Washita and Arkansas stones were first put on the market some 55 years ago. The Arkansas and Washita stones are similar in composition, both being about 99 per cent. pure silica, but the Arkansas is many times harder, its crystals much smaller, and the edge it imparts much finer. It is nearly 18 times as hard as marble, and will cut the very hardest steel. The Washita stone is much softer and coarser, and is adapted best to sharpening wood working tools, such as are used by carpenters and joiners. It has entirely supplanted the Turkey stone in America, and is fast taking its place in Europe and other countries.

Although there are numerous outcroppings, or indications, of this Novaculite lead in the Ozark Mountains, yet there have been very few actual quarries or deposits of good rock discovered in the last 30 years.

It is the general impression among those without practical experience in the business that to manufacture Washita and Arkansas oilstones it is only necessary to procure rock anywhere on these leads similar in appearance to the genuine oilstone rock, and finish it up into the desired shapes. This has been attempted by many different parties during the past thirty years, and though resulting invariably in failure, sooner or later, yet it has done considerable injury to the reputation of these unrivalled oilstones. Only men of long experience in the quarrying are qualified to select the rock, and only the manufacturer who has made careful study of the requirements of the edge tool trade can determine the grade or quality best suited to various purposes. The Pike Co. first took up the manufacture of these oilstones in 1882, and after a few years of rather expensive experience in learning the truth of the above statements, became convinced that to make a success of this branch of the business they must have the product of the best quarries, and only the men most skilled in handling and selecting the finished stone. It took much time and expense to accomplish this, but, to persevere is to achieve success, and for some years now their selected brands of Arkansas and Washita have been recognized the world over as the standard oilstones for their respective purposes.

In Orleans, Orange County, Indiana, the Pike Mfg. Co. have a warehouse for the handling of the fine grained Sandstone, quarried in the surrounding district. This stone is of two grades, commercially known as Hindostan and Shoemakers' Sandstone. The Hindostan is the finer, and adapted for putting a quick edge on wood workers' tools. It can be used with oil or water, owing to its free, soft grit.

In addition to the mills, warehouses and quarries at different points, the Pike Mfg. Co. have a store at No. 151 Chambers Street, New York, where they carry a large stock of all the goods manufactured by them, for the convenience of local and export trade. They also carry at this store the largest line in America of imported Razor Hones and Emery Stones. The principal razor hones are imported direct by them from the leading quarries in Belgium.

The striker who quits a job and prevents another man who needs money from taking the job is as criminal as a highway robber. Taking money away from a man who has it, and preventing a man from earning money when he must have it, are crimes of about equal proportion.

Recent Trade Publications.

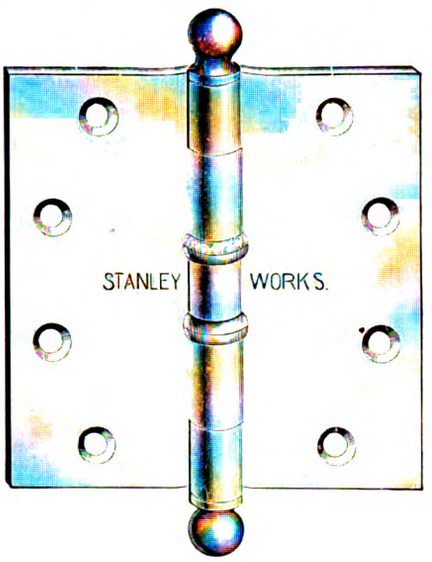
The Standard Tool Co., Cleveland, have issued a "Greeting" for 1898, which they announce is "devoted to progress in time and tools." They add: "This little manual is sent to you in the confident hope that it will give you some useful information on mechanics and tools that is absolutely necessary and up to date." The little phamplet not only carries out this promise, but throws in gratuitously a blank page for memoranda, alternating with each printed sheet, so that it combines a catalogue, a hand-book of information, and memorandum book all in one. Their lines of goods are illustrated and described, with tables devoted to tap drills, twist drills, gauges in decimals, twist drill grinding gauge and chart, speed of drills, etc. It contains, in addition, a calendar for each month in the year, information as to weights, measures, etc. It carries out in full the quotation upon the second page: "Let us have facts, real, certain, unmistakable facts; there can be no science without them." They have also issued an attractive leaflet of eight pages, illustrating in full their line of electrically welded bicycle tires. Either of these will be sent on application.

Goodell Bros. Co., Greenfield, Mass., have published an illustrated price list of mechanics' tools and specialties manufactured by them. This covers their full line of screw-drivers, drills, tool sets, braces, chucks, polishing heads, saw-blades, last cutters, nail pullers, etc. In a note of introduction they say: "In greeting you with our catalogue No. 3, we wish to thank our many friends for their generous appreciation of our last addition, the demand for which exceeded our expectations to such an extent that we find ourselves obliged to bring out this one several months earlier than we anticipated. We have added a number of new tools and devices, which we are pleased to bring to your notice, with the assurance that they will hold up their ends of the reputation which has accrued to our Automatic Screw Drivers and Drills. We have aimed at concise descriptions, have eliminated all testimonals, and have devoted generous space to large and well defined cuts, all of which we trust will merit your approval."

Brown & Wales, Nos. 69–83 Purchase Street, Boston, have sent us a catalogue illustrating and describing their lines of goods, covering bicycle material, iron, steel, heavy Hardware, sheet-iron, tin-plates, etc. It gives a list of their agencies, and much valuable information as to prices, sizes, etc., concerning their various lines of goods.

"Blue Book for Register Trade" is a very handsome publication issued by the Ferrosteel Co., Cleveland, It is printed in colors and gold, and shows in full their line of goods, warm air registers and ventilators, made of Ferrosteel.

J. M. Warren & Co., River Street, Troy, N. Y., have published two catalogues for 1898, one devoted to their bicycle sundries, and the other specially to the Trojan, Mohawk and Special bicycles, which they handle. Both publications are well printed and thoroughly illustrated.



A Bangor "drummer" tried to save a lady from leaping from a rapidly moving train. After he had thrown his arms around her and dragged her back into the car, she recovered from her surprise enough to call him all the names in the feminine vocabulary and explain that she went out on the platform to wave her handkerchief at some friends. The passengers appreciated it all, but the "drummer" didn't seem happy.—*American Druggist.*

If you will notice carefully, you will discover that the prettiest girls wear the smallest hats when they go tandeming.—*The Bicycling World.*

The Enlarged Plant OF THE Putnam Nail Co.

In view of the systematic misrepresentations which are being circulated in regard to our business, we take this time and method of bringing to your attention these facts:

1. We own and operate the largest factory in the world with a production equal to any three in the United States. All the buildings shown in the above cut are exclusively occupied by us in the manufacture of the Putnam Nail.

2. Our sales increased several hundred tons in 1897 and our goods are marketed throughout the world.

3. We still are the only ones who manufacture a hot-forged and hammer-pointed nail without cold rolling and shearing.

4 Swedish iron is still used in the manufacture of the Putnam Nail.

5. The highest award at the Columbian Exposition, ' Supreme Excellence in material, process and quality of finished product " is sustained by the verdict of the millions of horse owners and horse shoers who use the Putnam Nail.

6. Be not misled, by any representations by word of mouth, or by the printing of an old portrait of S. S. Putnam in connection with that of the inventor of another process, into the belief that any other company is associated with us in any way, as S. S. Putnam now deceased, severed his connection with this concern twenty years ago, before our hammer-pointed nail was perfected, and has had nothing whatever to do with our business since.

The long established reputation for superior quality which the Putnam Hot Forged and Hammer Pointed Nail enjoys, renders it an easy seller at present prices, with a good margin to the trade. . . . .

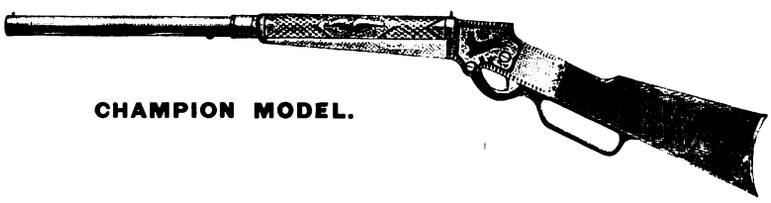
COLUMBIAN 1000-SHOT AIR RIFLE



MODEL OF 1898.

It shoots 1000 times at one loading of the magazine, at a cost of 10 cents.

This Air Rifle is a triumph in magazine guns. It holds a thousand BB shot and is most simple in its working. All parts are interchangeable, replaced for a few cents; a new and valuable feature in air guns. It is very accurate and splendid for target shooting Easily put together or taken apart. In style it resembles a regular repeating rifle and is packed in a neat pasteboard case with list of parts and directions. A source of great amusement for men and boys.

List, per dozen, ENAMELED, $30.00.; FULL NICKEL, $42.00.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight, it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. . . . . .

In ordering parts use the same list of numbers as 1898 Model. Also same directions in loading, etc. In ordering parts give Model.

BUILDERS' AND OTHER HARDWARE.

COLUMBIA CYLINDER DOOR LOCKS.

FRONT DOOR LOCK, No. C1250.

KEYS,
CLASS No. 745.

THE COLUMBIA CYLINDER.

The manner of its application to Lock Case is the simplest and most effective in use; the Lock Case being provided with a round hole tapering from the inside, and the Cylinder Shell having a corresponding undercut shoulder. By inserting Cylinder through hole in case and turning set screw in face of Lock-front, the Cylinder and Case are interlocked, completing a most effective and durable fastening. The ease of adjustment of the cylinders (which are inserted in the locks before the escutcheons are put on the door, thus avoiding the difficulty experienced of adjusting cylinders made to be screwed into the locks after the escutcheons are placed on the doors) will readily commend the Columbia Locks as being superior to others.

THE NEW COLUMBIA KEY.

The key being endbitted, the tumbler cuts thereof are brought into direct and instant contact with the tumblers themselves. This insures an easy insertion of the key and at the same time prevents unnecessary friction and wear. The direct action of the key on the tumblers is a great advantage in durability and certainty of operation. By reason of the corrugation of the key and the corresponding cross section of the slot in the cylinder, it is made practically impossible to use a flat key in the cylinder, and the security of the lock is thereby increased. The keys are made of German Silver, gold-plated. With this new key we can safely claim that the Columbia Locks are fully secure against opening by any other means than the keys especially made for them.

The Very Latest.
Patented Aug. 24, '97.

The "Eclipse Cleanable" Refrigerator is original.

It is the only removable ice chamber refrigerator having a removable flue through which pure cold dry air is introduced in the bottom of the provision room, getting under and between the provisions, and forcing the warm moist air and odors upwards, and creating a positive current or circulation. All other makes are imitations of the first crude removable tank refrigerator introduced years ago, and have an ice box set in top, from which cold, heavy air falls by gravity and forces downward the objectionable matters. THE ECLIPSE HAS THE LARGEST ICE CAPACITY.

HAS ALL THE CLEANABLE FEATURES OF OTHER MAKES.
HAS MORE TALKING POINTS THAN ANY OTHERS.

THE ECLIPSE REFRIGERATOR WORKS, BURLINGTON, VERMONT.

BUSINESS IS BETTER AND THERE WILL BE A LARGER DEMAND THAN EVER FOR OUR

Sheep Skin Mitten.

Acknowledged to be the best article for polishing stoves, as it does away with the old time dirtiness of the work, making this work a pleasure. Also invaluable for polishing brass or glass, or silverware, which it does not scratch. For tan shoes and cleaning bicycles it has demonstrated itself a conspicuous success.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over are requested to contribute to this page News of new factories or companies, changes, improvements. etc , will be gladly received, and promptly published.

New Companies, Etc.

Augusta, Ga.—The Augusta Novelty Mfg. Co., has been incorporated by John R. Platt, F. C. des Passos, W. T. Rawlinson, George R. Lombard, Stewart Phinizy and others; for the manufacture of a patent rotary razor strap, machinery and novelties of all kinds. Capital stock, $8000.

Binghamton, N. Y.—The certificate of incorporation of the Nineteen Hundred Washer Co. has been filed at the county clerk's office. The company is organized to "manufacture, sell and deal in washing machines, wringers and other laundry supplies and merchandise, and the doing of other things incident thereto." The capital stock is $12,000, and the directors for the first year are Thomas B. Crary, Marcus A. Miller and Romaine F. Bieber, each of whom holds forty shares.

Camden, N. J.—The Bates Arms & Engine Co. to manufacture firearms and machinery; capital, $160,000. Corporators: Francis G. Bates, Mary A. Bates, W. Welcome Bates, Elwood Hancock and Allen H. Twining, of Philadelphia, and John W. Westcott, of Haddonfield, N. J.

Chicago, Ill.—The Model Window Hinge Co., has been incorporated by George Reed and others. Capital stock, $50,000.

Newark, N. J.—The Drummond Latham Co., has been incorporated by J. J. Hogan and others; to manufacture saddlery and Hardware. Capital stock not mentioned.

New Orleans, La.—The Universal Cultivator Co., Limited, has been incorporated with Wm. S. H. Wailes, president; Joseph B. West, vice-president; Chas. Caffe, secretary-treasurer; for the purpose of manufacturing agricultural implements, also the Wailes combination cultivator. Capital stock, $100,000.

Owosso, Mich,—Owosso is soon to have a new industry in the form of a reversible plow works. C. W. Reed, the inventor, is making preliminary arrangements. Local capital will push the concern.

Springfield, Ill.—Articles of incorporation of the American Steel and Wire Co. have been filed with the Secretary of State. The incorporators are John W. Gates, Isaac L. Elwood and Elbert H. Garry, who state that the headquarters of the company will be in Chicago. The capital stock is placed at $12,000,000, equally divided into preferred and common shares.

Syracuse, N. Y.—Sweet's Steel Co., has been incorporated by J. W. Smith and others. Capital stock, $100,000.

Woodbine, Pa.—The Universal Lock Co. of New York have leased a plant in this town, and will employ 200 hands.

Changes and Improvements.

Anderson, Ind.—The Anderson Nut & Bolt Works, closed for some months, have resumed operations. The scale signed advances men's wages 3 per cent.

Austin, Tex.—The Brenstedt Hardware Co., has changed its name to the "Eikel-Brenstedt Company." The officers are J. Eikel, William Brenstedt, Robert Eikel, A. P. Matthews and Andrew Brenstedt. Capital stock, $100,000.

Belleville, Ill.—The Belleville Nail Works, the new industry which are about to commence business on East Main Street, have received a large shipment of wire, which will be converted into nails. The factory has orders ahead for 2000 kegs of nails, to be delivered as soon as made.

Brownville, Me.—J. C. Gillies is preparing to start a factory for the manufacture of all kinds of handles at Sebec Village. It is reported that there is an excellent location there, as there is an abundance of all kinds of lumber that he desires.

Buffalo, N. Y.—Niagara Stamping & Tool Co , has changed its firm name to Niagara Machine & Tool Works.

Chicago, Ill.—The Geiser Manufacturing Co., makers of agricultural implements at Waynesboro, Pa., have secured twelve acres at Chicago Heights on which they will erect buildings and establish a large plant.

Cincinnati, O.—W. H. Burtner, vice-president of the Board of Directors of the Davis & Egan Machine Tool Co., has voluntary resigned his official connection with that company, and also resigned from the board. His successor has not been selected.

Daleville, Ind.—The Ideal Stove & Foundry Co. af this place have absorbed the Homestead plant at Dayton, O., and will remove it here, thereby doubling the manufacturing capacity of the Ideal works.

Fairfield, Ia.—R. T. McClain has dissolved partnership in the I. X. L. Hardware Co., and will engage in the farming implement business. Messrs. Speck & Davis will retain the old firm.

Greenfield, Mass.—Goodell Brothers Co., manufacturers of tools, will erect an addition to their plant.

Harriman, Tenn.—W. T. Henry has purchased a controlling interest in the Harriman Tack Company, and in connection with Mr. Webster, his son-in-law, will manage the business.

Hartford, Conn.—The National Machine Co. has filed in the office of the Secretary of State a certificate of the reduction of its capital stock from $100,000 to $25,000 by the reduction of the par value of the shares from $100 to $25 per share. The certificate is signed by Charles E. Billings, S. M. Bronson, Silas Chapman, Jr , and Ralph Crittenden, a majority of the directors.

Milwaukee, Wis.—The Western Hardware Mfg. Co., will build an addition to its large plant.

Montour Falls, N.Y.—To the extreme satisfaction of all the residents of this place a contract has been executed by the officers of the Cronk Hanger and Carrier Cutlery companies, whose plants were destroyed by a fire a short time ago, whereby the shops are to be rebuilt in this place.

Reading, Pa.—The entire plant of the Penn Hardware Works, corner of Spruce and Water Streets, this city, is running at its fullest capacity at present. The firm employ over 500 hands, and every department is busy until 10 P. M There is a large demand at present for builders' Hardware, and many orders have been received.

Sharon, Pa.—The plant of Graff & Co., stove manufacturers, is to be removed to Monongahela, Pa., and the capacity increased.

Springfield, O.—The entire Bar & Knife plant has been sold to the Whiteley Mfg. Co., which has just been incorporated with a capital of $300,000.

Syracuse, N. Y.—The Central City Brass & Mfg. Co. have purchased the property in Burnet Avenue, corner of Decker Street, known as the Falkner property, and will erect on the site a large home for its plant. The property has a frontage of 140 feet on Burnet Avenue and 132 feet on Decker Street.

West Haven, Conn.—It has been decided that the Graham Mfg. Co. will remove to Derby in a few days. The leading stockholders in the company are G. M. A len and M. C. White. The firm manufacture keys, bicycle bells, and a line of fine hardware. At the Derby factory the scope of the firm will be increased and larger quarters assured for the expansion of business. C. H. Mann, general manager of the company, will continue as the active head and most of the employes will go from New Haven and West Haven to Derby.

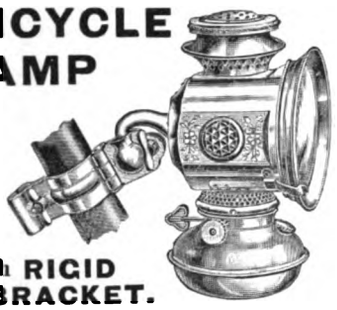
Williamsport, Pa.—The Kline & Co. to manufacture Hardware; capital $45 000. Corporators, James N. Kline and John F. Fredericks, of Williamsport, and John W. Greenman, of Trenton, N. J.

Recent Fires.

Taunton, Mass.—Upward of $10,000 damage was done by a fire in the three-story brick building on Court Street, occupied chiefly by the Anthony & Cushman Tack Company. The fire probably caught from a gas jet in a wooden L. The Charles Webster file works were also damaged. The Anthony & Cushman company had many tack machines in the building.

Miscellaneous.

Harriman, Tenn.—The Harriman Hoe & Tool Co. are now making 3000 hoes per day. They are now running extra time.



Springfield, O.—Springfield Foundry Co. are putting in $10,000 worth of machinery to manufacture machine tools. Casting work on hand is valued at $150,000.

West Union, O.—The Manchester Stove & Range Co., which was forced to close down in 1896 on account of dull times, has felt the reviving touch of McKinley prosperity. The company has been reorganized and will start up its work with a full force in a short time.

Grand Rapids, Mich.—Articles of incorporation of the F. B. Parks Tire Heating Co. have been filed in the office of the county clerk. The company will manufacture a tire healing compound and other bicycle sundries. The capital stock is stated to be $60,000, and $36,000 is paid in.

Madison, Wis.—The D. D. Warner Co. have started in business at No. 114 State Street, in the manufacture, repair and sale of bicycles.

Newark, N. J.—The Eisenhuth Bicycle Co. Capital, $100,000. Corporators: John W. Eisenhuth, Clifton T. Geddes and James Q. Barcus, of New York, and Wilbur F. Steele.

New York, N. Y.—F. W. Cuttrell Co. has been incorporated by Howard C. Winne, Frank W. Cuttrell and Myrtie E. Winne; to manufacture bicycles. Capital stock, $5000.

Port Richmond, N. Y.— J. Lake has opened a new store on Richmond Avenue.

Somerville, N. J.—The Frazer Sun & Planet Co., with a capital of $100,000, has been incorporated in the Somerset County clerk's office, at Somerville, N. J. The incorporators are: John A. Frech, of Somerville; David A. Frazer and J. Davis, of New Market; George M. Frech, of Annandale, and Edward L. Clark, of Dunnellen. The plant of the company will be at Plainfield. It will manufacture bicycles and bicycle sundries.

Washington, D. C.—The Century Cycle Co. has been organized under the laws of the State of Virginia, for the purpose of carrying on a general bicycle business. It has purchased the plant of the Sylph-Winton Cycle Agency, at Sixth and F Streets, N. W., and will continue the business. The officers and board of directors of the new company are: Charles J. Gillette, president; Chapin Brown, vice-president; Charles G. Watson, secretary; Porter J. Coston, treasurer.

Waterloo, Iowa.—L. C. Stifler and his force of men are busily engaged in arranging for the opening of his bicycle factory on Lafayette Street.

Changes and Removals.

Anderson, Ind.—The Anderson bicycle plant has been sold at receiver's sale to J. B. Lott. The plant was invoiced at $26,000, and sold for $7200.

Chicago, Ill.—Chicago Corundum Wheel Co. has certified to a change of name to the Chicago Wheel Mfg. Co.

Chicago, Ill.—The North Chicago Bicycle Exchange has certified to a change of name to the A. J. Kalkus Tailoring Co.; also change object of corporation.

Hoopeston, Ill.—Jas. M. Newton, Hardware, will add bicycles.

Los Angeles, Cal.—V. R. Bennett, bicycles, reported to be selling out.

Middletown, Conn.—Bryan & Parker have disposed of their interest in the bicycle repair business to the firm of Campbell & Connery. They took charge at once, and will continue the jobbing as usual, only more extensively. The firm will make wheels to order.

Seymour, Conn.—The H. A. Matthews Mfg. Co., of this place, having manufactured parts of bicycles for several years, are now making the complete machines.

Syracuse N. Y.—George H. Lloyd has resigned his position as traveler for the Barnes Cycle Co., to take the general management of the new Hollenbeck Saddle Co., which concern has been recently incorporated and organized into a stock company having a capital of $35,000, to manufacture hygienic bicycle saddles, leather specialties and gear cases for bicycles. At a meeting of the board of directors the following officers were chosen: President, Robert Cronsdale; vice president, John W. Teller; secretary, W. L. G. Thomas; treasurer and manager, George H. Lloyd.

Wallingford, Conn.—R. E. Badger & Co. have bought out the bicycle business of F. A. Norton & Co.

Washington, D. C.—Cline Bros., bicycle sundries and athletic goods, No. 909 Pennsylvania Avenue, N.W., will sell out this line of goods.

Miscellaneous.

Bristol, Conn.—The brake department of the New Departure Bell Co. are compelled te work overtime to fill orders.

Orlando, Fla.—The Lozier Mfg. Co., who manufacture the Cleveland bicycle, have made F. N. Boardman a substantial present as a token of appreciation of his success in selling wheels. He has sold fifty-five within the past seven months.

Toledo, Ohio.—The Snell Cycle Fittings Co. have received foreign orders amounting in the aggregate to 1900 wheels.

The Engineer in Modern Warfare.

The present agitation in connection with a possible outbreak of war brings to the public mind most forcibly the remarkable extent to which engineering has entered into all the details of modern warfare. Whether war occurs or not, it cannot but be realized that it is to the work of the engineer more than to any other member of the community that the country must look for defense or offense, and that it is in the machine shops and ship yards, in the drafting rooms and mechanical laboratories, that the destinies of modern nations are to be decided.

One has only to look back a few hundred years in history and note the absolute transformation wrought in warfare as soon as the introduction of gunpowder and fire artillery became an accomplished fact. The trained knight, bred to arms, and honestly believing that in him lay all the science of warfare that could ever be possible, was suddenly transformed into a ridiculous Don Quixote, helpless before the rude band of peasants, who, with their "villainous saltpeter," made all his knowledge of the art of war obsolete. To-day we are undoubtedly on the verge of a similar transformation, and should the misfortune of war become a dire necessity, there is every reason to believe that the ingenuity of American engineers, constructors and inventors would evolve devices of destruction before which the existing battleships and fortifications would soon be relegated to obscurity. Two instances of most recent occurrence have demonstrated the weakness of modern warships; one the case with which the single blow of a ram sent the *Victoria* to the bottom of the Mediterranean, the other the havoc which a single explosion wrought upon the *Maine* in Havana harbor. The modern warship is fatally like the armored knight of mediæval times, vulnerable because of exceeding bulk and clumsiness, a fair mark for the skill of the engineer who can combine force and motion and substitute rapidity for massiveness, and secrecy for strength.—*The Engineer.*

$1,250.00 for ten Oldest Bicycles in America.

Ten New HOWARD CHAINLESS
To be given in exchange.

OUR Advertising Department proposes to give ten latest Improved Howard Chainless Bicycles, valued at One Hundred and Twenty-five Dollars each, ($1,250.00) in even exchange for an equal number of the oldest bicycles of any make, in good order and condition for use. Awards to be decided from applications sent in before the 4th of July.

All You Have to Do is to send the information to us in a sealed Envelope:—1. Your name, residence and postoffice address. 2, The name, factory number and description of your bicycle. 3. How long you have owned it and how long you have ridden it. 4. If you want our illustrated catalogue send two 2-cent stamps.

If you own an old bicycle you merely send the required information. It may bring to your door the best bicycle in the world in exchange for your old one. This is no scheme to secure a payment, subscription, or admittance for a book agent. We want the names of people who can use good bicycles. We make HOWARD CHAINLESS BICYCLES exclusively and want to sell one or two in every town this season. Have been making chainless bicycles for years. If no agent in your town handles the Howard Chainless write us at once. Address

The Columbus Association.

Editor Hardware: The Wholesale & Retail Hardware Association of Columbus, Ohio, was organized April 28, 1897, for the following reasons:

First: For the protection of the mutual interests of its members.

Second: For the collection of valuable trade information.

Third: For the advancement of the social interests of its members.

The officers elected at the time of organization and still holding office are as follows:

President: E. L. Harris, of J. S. Abbott & Co.

Vice-President: J. H. Smith, of the Smith Bros. Hardware Co.

Secretary: D. R. Burr, with the Kilbourne-Jones Co.

Treasurer; Darius Tallmadge, of the Tallmadge Hardware Co.

The different committees appointed at the time of organization with their chairmen are as follows:

Grievance Committee: C. B. Burr, of Blackwood, Green & Co.

Price Committee: E. B. Kurtz, of the Kilbourne-Jones Co.

Credit Committee: Darius Tallmadge, of the Tallmadge Hardware Co.

Membership Committee: O. L. Davis. of the Smith Bros. Hardware Co.

Room Committee: J. L. Green, of Blackwood, Green & Co.

The duties of the above committees are designated by the names of the committees. The membership at this time is composed of twenty-two firms comprising all but one or two of the Hardware houses in the city.

The Association has accomplished a great deal in the direction of avoiding unnecessary cutting of prices on some staple articles that buyers are in the habit of shopping on from one store to another, and all dealers know from experience that many customers are very forgetful or careless about making true statements when they go from one store to another. The Hardware dealers in Columbus find by comparing notes that they have been relying too much on the word of their customers, and have been grossly imposed upon. The Association has brought them together often and they have confidence in each other, and instead of taking a customer's word that he can buy an article at some ridiculously low price, they communicate with the merchant who is represented as having made the low price and find he has not done so. In other words, they have quit being beaten down on goods. They have come to the conclusion that the correct way to sell goods is to ask only a reasonable profit, and if they cannot sell let the customer go, and as a rule he does not go but buys what he wants at the dealer's price. If dealers are honest with each other, and know what they can afford to sell goods for, and then stick to their price, it will not be long until their customers are educated up to the point of not beating down, and the customer will have more confidence in the dealer. One secret of the department store success is there is one price system. Everything is marked in plain figures and that is the price. If an article is marked 21 cents it means 21 cents, not 20 cents. If a customer finds he can beat a merchant down on the price of one article, that customer will never buy anything of that merchant without trying to beat him down.

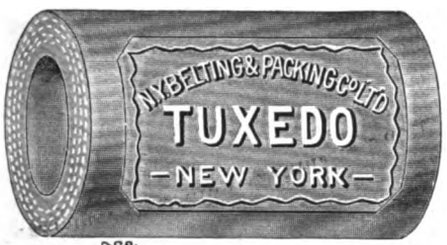
Our Association meets the first Wednesday in each month, and is well attended. The annual election occurs the first Wednesday in May. It is the opinion of each member of the Association that it is a success, and as we learn wisdom by experience, the benefits will be greater and better appreciated. Smith Bros. Hardware Co.

Columbus, O.

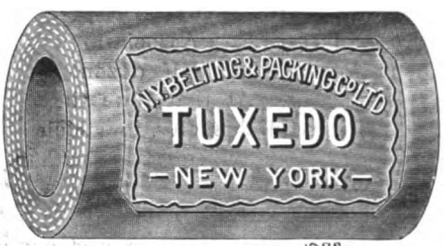
Compass needles are made of very hard steel, as such steel endowed with magnetism retains it permanently.

Brass Furniture Trimmings.

Every Hardware dealer will recognize the necessity for carrying a well selected stock of such brass furniture trimmings as are apt to be in general demand. In every town, no matter how small, there are always one or more furniture repair shops which constantly need goods of this description; more especially, drawer pulls and escutcheons of Colonial design that are suitable for much of the antique mahogany furniture that is constantly being refurbished. These shops, as a rule, do not buy in large quantities like the wholesale manufacturers, and are dependent on the local Hardware dealer for their source of supply. Then again there is always a large class of amateur tinkers, in every community, who are constantly fitting up things to be used about the house, and want brass screw knobs, hat and coat hooks, drawer pulls, handles, knobs and rings of various descriptions. And again, there is always a demand for brass curtain rings and screw rings. To the dealer who is wide-awake enough to want to cater for this class of trade, we could call attention to the goods manufactured by the American Ring Co., Waterbury, Conn., and illustrated in their handsome 184 page catalogue of brass furniture trimmings, which will, we presume, be sent to any dealer who requests it and mentions *Hardware*. We find,



in this book, illustrations of brass corner plates, umbrella arms, hinge plates and towel racks. Although these goods are not ordinarily kept in stock by the Hardware dealer, readers might often find a chance to sell them on special order, if they could show illustrations of the goods, and this catalogue would enable them to do so. This company are also manufacturers of sleigh-bells and brass bedstead trimmings, and make to order, a line of brass and irons and standards for mirrors and onyx tables. Besides these goods, they are manufacturing a line of small novelties for gentlemen's wear, in which the Washburne Patent Fasteners are used. These include necktie, cuff, pencil and eye-glass holders, hose and drawers supporters, collar buttons and a very ingenious bachelor's button intended to slip on in an instant, to take the place of the suspender button, whose loss is so keenly felt, the moment it is gone. Besides these they make key chains in nickel plate, phosphor bronze and aluminum, which may be fastened to the edge of the pocket or the waistband. These articles all retail for ten cents, except the key chains, and would make a good line for the Hardware dealer who handles novelties. They are easy to slip on and off and hold with a bull-dog tenacity without injury to the fabric in any way. Write to the American Ring Co. for full particulars, prices and discounts on all of their goods.



It is stated that the consumption of gas among the working class in Great Britain has been greatly increased by the introduction of coin meters. To consumers of this class a supply of gas by coin meters is a great boon, and is much appreciated. It is said to be much safer than lighting by oil, which it is rapidly superseding; and the cost, in most cases, is less. The extra cost of supplying gas by coin meters has not yet been determined in many towns with any degree of accuracy, as the system has not been established sufficiently long to obtain reliable information.

The man who indulges in a single advertisement, and then rails at the returns, is like the boy who studied law two days and then said: "The law ain't what it's cracked up to be. I'm sorry I learned it."—*Ironmongery.*

THE NATIONAL HARDWARE ASSOCIATION.

Editor Hardware: Some twelve years ago, the idea of forming a local Hardware Association in Philadelphia was discussed between some half dozen persons, the writer among the number. At that time there were wholesale Hardware houses in this city, in which members of the firm were not personally acquainted with members of other firms; indeed there were several firms who scarcely knew some of their competitors by sight.

This Philadelphia Association was composed of both jobbers and manufacturers. During the interim, strong ties of friendship have been formed between jobbers themselves, between manufacturers, and between jobbers and manufacturers. Meetings were held monthly, matters of general interest discussed, papers of an intellectual nature read and commented upon. Thus competitors came frequently in contact with each other, and there was always something far above and beyond the "talk of shop" for a subject of conversation, and it soon became evident that there was no reason why friendship should not exist between persons in one line of trade, any more than it could exist between dealers in dry goods or groceries, or bankers and Hardware dealers.

W. W. SUPPLEE, PREST. NATIONAL HARDWARE ASSOCIATION

Some five years ago while attending the New York Club banquet, and during a conversation with representative guests, the writer found how many were quite unfamiliar with even the names of firms or dealers in Hardware in distant cities. Local associations had been formed in two or three other cities, but nothing that would tend to acquaintance beyond the borders of their own cities.

The Southern Hardware Jobbers' Association was formed soon after that date, the first meeting being in Richmond.

This Association has engendered friendship and extended the hand of fellowship to competitors, and mutually pleasant relations exist with manufacturers.

During the fall of 1894, the wholesale dealers of Hardware in the city of Cleveland conceived the idea of forming a National Hardware Association of the United States, and after consultation with jobbers located in a few other cities, it was believed the idea was feasible, and a meeting was called for December 13, 1894.

At that meeting practically all present were impressed with the fact that competition in trade was not a menace to sociability and friendship, and that the idea was unworthy of the intelligence which our craft represents. They believed there was no intelligent reason why acquaintance or friendship could not consistently and harmoniously join hands in the struggle for trade.

Although some forty-seven large firms were represented at the first meeting, at that session only twenty-eight firms there signed the constitution and by-laws; the others present desired to consult with absent partners. The foundation thus laid, in December 1894, has been more solidly cemented with each year and with each additional member, and at the first annual meeting the membership had increased fourfold, and at the last convention, a membership almost double the number on the roll in 1895 was reported.

Article No. 2 of the constitution and by-laws reads as follows: "*The object of this Association shall be the promotion of more friendly business relations, and mutual confidence and good-will with each other and with manufacturers.*" This Article is the foundation stone upon which the entire structure is built.

The policy of the association is somewhat dissimilar from that of other national organizations in our country. We concede and recognize the fact that each firm reserves the right to conduct its own business, while at the same time realize the wholesome effect of the restraining influence, without which, perhaps, occasional vindicative feeling, disturbances in trade, or embarrassing irregularities might arise which judgment and prudence could prevent.

The association advocates in all cases integrity, equity, justice and liberality in all trade dealings, the promotion and fostering of everything that will produce a better and safer system of business methods, discouraging and discountenancing injustice toward each other or toward manufacturers. In other words, we advocate and strongly urge one point, at which all jobbers and manufacturers can safely and judiciously aim, namely: "*A high standard of business methods.*" When this standard has been reached by both manufacturers and jobbers, most of the abuses of trade will have already been corrected. We believe manufacturers in conducting their business have inalienable rights which should always be respected and believe manufacturers' established prices, to which prices they themselves strictly adhere for a given quantity of goods, should be equally respected by the jobber.

The members of the association feel that the jobbers are as essential and necessary in marketing the goods as the workmen are in manufacturing the goods for the manufacturer, and further believe from practical knowledge and

Digitized by Google

experience that through the channel of the jobbers, who represent the lines containing from five hundred to five thousand varieties, it can be done at a far less cost and expense than can possibly be accomplished by direct representatives of limited lines.

Working on this line, no intelligent jobber would think of establishing "fake stands" either in their city or interior towns as rivals to the retail merchant, neither would good judgment prompt them to establish branch retail houses in distant towns or cities, and thus become their own customers' (the retail merchants) rivals. Nor could this competition be conducted on the same expense account were they to make the effort.

The association is national in its character, extending from ocean to ocean, and accepting as members legitimate dealers from one end of the country to the other, of those who accept the broad principles we advocate, making a determined effort to secure through natural and harmonious co-operation the maximum high standard of conducting business.

The annual meeting is held on the third Wednesday of each November, at which time the President's address, referring to the results of the year, is presented to the membership; also the report of the secretary-treasurer, dealing with various matters coming under his jurisdiction.

The by-laws provide for a meeting of the executive committee at least twice a year, and this committee makes a report at the annual convention, as do also the various standing committees. The annual conventions have always been well attended, and great interest manifested in their deliberations.

It has fallen to the lot of the executive officers of this Association to lead the way, point out the path and clear the road of difficulties, obstructions and doubts which may have originally existed in the minds of a few jobbers, manufacturers or retail merchants regarding the possible success or either, national, sectional or local association in the various departments of trade and commerce.

At the time of the formation of this Association there were but few older associations of this nature in existence, and notwithstanding the depressed conditions of trade for three years after its formation, it has flourished and succeeded to an extent which amazed the few older organizations, and many have commented upon it as the most successful organization ever formed, and beyond this it has stimulated other branches of trade and commerce into harmonious co operation, and at a later date, perhaps suggested the idea to the National Association of Manufacturers, who have so aided our country in the export trade, which they have developed far beyond the most sanguine anticipations, and which time, money and energy expended in individual efforts have failed to accomplish. Indeed, exhausted energy lay helpless and charges to expense account had remained unbalanced when the call for a National Association of Manufacturers was made, which their stimulating efforts have enabled them to extend their trade in foreign countries to an amazing extent.

Since the formation of our Association I think there are over a dozen national associations in other branches of trade that have come into existence, and within the last two years Great Britain has followed the example and formed a national association and reports great success as attending its efforts.

The committee on fraternal relations in our association have advocated the formation of local associations throughout the country on the lines laid down by the parent association. The success attending this, unquestionably has had no uncertain influence in the healthy growth of the retail Hardware local and sectional associations which have come into existence in the last few years, and we are informed that great good has been accomplished which could not have been secured through the scattering fire of individual efforts.

We hail those local and sectional associations of retail dealers, and we believe that if they will organize in the proper way, they can do much to make their business more pleasant and more profitable.

I feel that the associations alluded to will have a great deal of work along the line of protecting their interests against elements which seem to threaten the very existence of the retail trade.

There are a great manny matters, such as the arrangement of show-rooms; the selection of suitable stocks, the best method of advertising, and kindred subjects, which will permit of a large interchange of views to the mutual benefit of all participating in the conferences resulting from the formation of these local associations.

I predict for your anniversary edition some very interesting information from the various trade organizations

H. H. BISHOP, VICE-PRESIDENT.

throughout the country, and desire to congratulate you upon this renewed display of enterprise.

Yours truly,

WILLIAM W. SUPPLEE,

President National Hardware Association.

Philadelphia, Pa.

As a matter of historical record, we take the liberty of supplementing Mr. Supplee's most able and valuable contribution to the history of the National Association, by a presentation of some matters of record in connection with the formation and history of this Association. In December, 1894, a notification was issued to the prospective members of the proposed Association to the following effect:

"We take pleasure in advising you that the meeting of the wholesale Hardware dealers of the United States, to which we invited you under date of November 10th, will be held in this city December 13, 1894."

There gathered in Cleveland in response to this call a large number of leading representatives of the trade. William W. Supplee was elected temporary chairman, and W. H. Coles, of the McIntosh-Huntington Co., Cleveland, temporary secretary. Various papers were read, showing the feasibility and advisibility of forming a National Association. A committee was appointed to formulate a constitution, and when they reported the constitution which

Digitized by Google

they proposed, it was adopted, and the following officers were elected:

President: William W. Supplee, Philadelphia, Pa.

First Vice-President: John Alling, Chicago, Ill.

Second Vice-President: A. D. Langstaff, Memphis, Tenn.

Executive Committee: S. A. Bigelow, Boston; H. H. Bishop, Cleveland; Frank Shapleigh, St. Louis; Frederick Barker, Elmira. N. Y.; W. P. Smith, Knoxville, Tenn., and F. C. Pritzlaff, Milwaukee.

Secretary-Treasurer T. James Fernley was elected by the executive committee at a little later date, and the wisdom of that selection, the history of the Association well shows. A banquet was an incident of this first gathering, and the Association commenced life under the most favoring auspices.

The second meeting of the Association was held in Pittsburg, in November, 1895, and the occasion was one long to be remembered, not only because of the interest taken by the members, but also on account of the hospitable manner in which the manufacturers and jobbers of Pittsburg united

JOHN BINDLEY, MEMBER EXECUTIVE COMMITTEE.

in entertaining their guests. The following officers were elected:

President: W. W. Supplee, Philadelphia.

Secretary-Treasurer: T. James Fernley, Philadelphia.

First Vice-President: H. H. Bishop, Cleveland.

Second Vice-President: John Alling, Chicago.

The executive committee consisted of S. A. Bigelow, Boston; F. F. Strong, St. Paul; Brace Hayden, San Francisco and New York; Theo. S. Buhl, Detroit; Col. B. S. Eshelman, New Orleans; C. W. Tillinghast, Troy, N. Y.

The third annual meeting was held in Philadelphia, on November 18, 19 and 20, 1896, and was one of the largest, most successful, most useful and most cheerful gatherings of the kind ever seen in the Hardware or any other trade. The visitors were most hospitably entertained by the manufacturers and jobbers of Philadelphia, ending with a grand banquet at the Union League Club. The following gentlemen were elected officers:

President: W. W. Supplee, Philadelphia.

First Vice-President: H. H. Bishop, Cleveland.

Second Vice-President: John Alling, Chicago.

Secretary-Treasurer: T. James Fernley, Philadelphia.

The executive committee consisted of, for three years: John Bindley, Pittsburg, Pa., and William Chamberlain, Portland, Me.

For two years: F. P. Strong, St. Paul, Minn., and Theo. D. Buhl, Detroit, Mich.

For one year: Brace Hayden, San Franciso and New York, and Col. Morris B. Belknap, Louisville.

The fourth and last meeting was held in Buffalo, N. Y., on November 17, 18 and 19, 1897, and the Hardwaremen in that city were not behind their associates of Cleveland, Pittsburg and Philadelphia in the warmth of their welcome and the generosity of their hospitality. The following gentlemen were elected officers for the present year:

President: William W. Supplee, Philadelphia, Pa.

First Vice-President: H. H. Bishop, Cleveland, Ohio.

Second Vice-President: Brace Hayden, New York.

Executive committee: F. P. Strong, St. Paul, Minn.; Theo. Buhl, Detroit, Mich.; John Bindley, Pittsburg, Pa.; William Chamberlain, Portland, Me.; H. S. Blossom, Cleveland, Ohio; R. W. Shapleigh, St. Louis, Mo.

The next meeting will be held in Milwaukee, Wis., in November of the present year.

What is Credit?

In a recent address delivered by Wm. B. Dean, of Nichols & Dean, St. Paul, Minn., the following description of credit was presented:

Webster defines credit as "Good opinion founded on a belief in a man's veracity, integrity, ability and virtue." You will observe that the elements which enter into the constitution of credit are manifold. It is not veracity alone, or the telling of the truth. Neither is it honesty alone, nor ability alone, nor virtue alone. It is the combination of all of these which constituts credit. Let any one of the elements be lacking, and the structure is not complete.

Were I asked to place in their relative position those different principles which enter into the constitution of credit, I should put above all others that of honesty, the ability to discern and to do the right, and to tell the truth. Next I should place ability, natural or acquired, the capacity properly to use the powers with which we have been endowed and to make the best use of the opportunities that come to us. The young man who has ability and honesty is never long in want of a situation, and never fails to rise in the world. At the bottom of the list I should place capital.

The Cary Mfg. Co.'s Patent Sustained.

As will be noticed by their announcement in this issue of *Hardware* on page 79, the patent granted to the Cary Mfg. Co., No. 403,178, dated May 17, 1889, on box straps, has been fully sustained by a decision of the United States Court.

The defendant in the suit, the result of which is so important, is ordered to produce his books and make an accounting to the Cary Mfg. Co. of profits and damages for the infringement of said goods. In connection with this system of box strapping now so popular with the different lines of business, it is gratifying to state that none of the patents owned by the Cary Mfg. Co. has ever been decreed invalid.

In writing advertisements remember you are appealing to the masses, and be careful to use the same phraseology that you would employ were you addressing a crowd of eager customers in your store. A simple, conversational style is the one to employ in this connection. Rhetoric is out of place, because the proportion of people in the average city who would appreciate a "learned" advertisement is so small that the number it would interest would not serve to pay for the advertisement.—*Michigan Tradesman.*

EXPERT DINNER TESTIMONY.

Were any Court of Inquiry in this land to summon before it witnesses who were competent to speak on the question of Hardware Dinners, Alfred D. Clinch, of Underhill, Clinch & Co., New York City, would be counted among the experts. What Mr. Clinch does not know about Hardware dinners, would fill a very small book, and some idea of the extent of his lore and experience may be gleaned from the interesting article which follows. This was prepared by Mr. Clinch at the express invitation of *Hardware*, and we feel that it is a valuable contribution to the history of fraternity within the Hardware trade, of which these pages form a summary:

Editor Hardware: The purport of this article is to show by what means the dinners of the Hardware and Metal Trades of New York have become known for their completeness, and to aid our brothers-in-law of the Hardware trade who may be enrolled in similar lines of work.

Since I had the honor of inaugurating the first of the present series of Hardware Dinners, ably seconded by *Hardware*, the supervisory work has fallen to my lot, and as experience is a valued assistant in any line, it has been a particular aid in smoothing the path to the present standard of completeness from which the trade will accept of no retrograde steps. Had the first dinner been a failure, there would not be to-day the Hardware Club, for out of the dinner grew the club.

"Hello, Clinch! going to have a trade dinner this year?"

"You are a little previous; wait until you recover from your eating, while on your summer vacation."

"I will never forget this summer, even though I recover from its terrors."

What was the matter with this member of the Hardware Club? He had just returned from a summer "hotel" advertised to supply the best the market, *i.e.*, the landlord, could afford, and where they gave lectures on hygiene to prove that all the ills flesh is heir to, are caused by expanded stomachs, and the person was an enemy to mankind who wrote:

"All human history attests
That happiness for man—the hungry sinner!—
Since Eve ate apples, much depends on dinner."

The cue being dropped, and the question asked, the subject naturally comes before the next Board meeting, and one who is always in the Van when work is to be done, rises to the occasion, and in his dignified and courteous manner, thus addresses the chair:

"Mr. President, the time has arrived when we should decide if we are to have our annual trade dinner. They have attained such prominence, that it behooves us to get to work at once to secure speakers who will equal in character and quality those who we have so fortunately secured heretofore. And now, if it meets with the approval of the members present, I move the president appoint a dinner committee."

This is followed by the president appointing such a committee, of which the mover is always sure of being a large part because the others would not serve without him. Once having made a reputation for never shirking work on a dinner committee, you are always sure of an annual appointment. Following the appointment comes the selection of sub-committees on "Speakers," "Toasts and Topics" and "Arrangements." The most important of these is that on "Speakers," and should consist of not more than three members, for in case they should decide a junketing trip to Washington is necessary, they will spend all the money the general committee can afford. We once had such a committee composed of an editor, another who was fluent in English, and the third who acted as a Sergeant-at-arms. They came back flushed with "a promise from the President," "We have secured a Senator," and "We have corraled a Congressman." In combination, they seemed to have a pull, but when they slipped up on the final day, it was only safe to speak of it in whispers. The committee on "Toasts and Topics" should be composed of men with versatile and literary minds, for on them depends the hits and points from well-selected and catchy topics.

The committee on "Arrangements" calls for merchants who can discount the sayings of those who are to house the

ALFRED D. CLINCH.

affair, who are exact in their dealings and leave no loopholes. Over all the sub-committees, the chairman of the general committee must have oversight, and give his personal attention to the many small details consequent to a successful issue.

The committees must work in harmony and with a great deal of contagious enthusiasm, for by their optimism will be judged the coming event. All men like to be associated with successful affairs, be they social or financial, and if it is "the thing" to attend the Hardware dinners, no trouble will be experienced in disposing of the tickets.

Next in order must come the notification by circular of the members of the Hardware Club, members of the Hardware trade not connected with the club, those who have attended former dinners, and, lastly, those who have never attended the dinners, but who the committee feel should do so. This work means the sending of nearly one thousand envelopes containing the dinner circular, an application card for tickets and a return envelope. This work should precede the issuing of the dinner tickets by about three weeks, giving time for all to make up their minds

Digitized by Google

and to cancel any engagements that might interfere with their attendance.

When the first of our trade dinners was held, the manner of sale of the tickets was hard to decide on, and very fortunately the C. O. D. was agreed to be the only feasible plan to bring happiness to the committee. Many hard arguments were used to change the tactics, but they missed fire.

"How much are the tickets?"

"Six dollars."

"Put me down for four."

"We do no putting down. Sign one of the application cards and hold yourself responsible."

"What's the matter—is not my word good enough?"

"Yes; but the card is filed for reference to aid the committee."

"When will the tickets be ready?"

"We will notify you."

In the meantime the dinner tickets have been prepared and the time for delivery is at hand.

"Here, Mr. Ferguson, are the four tickets you subscribed for."

"Thank you; I will send you the money."

"Well, we will hold the tickets, and when you are ready we will be on hand."

"Why, is not my word good enough?"

"Yes, for all except Hardware dinner tickets."

"Why, do you expect me to pay for them before I know if I can use them at all?"

And there comes the rub. There is no hesitancy about subscribing, but a good deal about paying. By strict adherence to delivery only for cash, those who subscribe will take no tickets they are not sure of using, and if disappointed in a guest, will ask another to take the place. This makes almost a certainty of there being no vacant seats after the tables are arranged.

The majority of the tickets having been disposed of, the chairman opens an intelligence office, of which the principal feature is the lack of information.

"I would like to see the table diagram."

"There is no diagram arranged."

"Well, I want to know who I am to sit with?"

"Why, I suppose you have stated your request on the ticket sent you for that purpose."

"No, I thought I would see who are going."

"Well, I thought I would put you alongside of Mr. Blank."

"What! Here, cross my name off. I was going to the dinner for pleasure. Did you place me there for a purpose?"

And so it goes on, day by day, the committee hearing the complaints and wondering if the congenials are all to stay away. The fateful day for arranging the tables should be postponed to the last moment, and the work done in secret at night in the sanctity of home. No copies should be brought down-town, so as to preclude the possibility of the seating information getting abroad, and they should be transmitted direct to the printer, and then the words "too late, the printer has them," can be said to the applicants who want to be sure "they are placed at the centre table about the middle of the room."

There is one committee appointed that has no work to do until the evening of the dinner, the Reception Committee, made up of representative men who are pleasing in their manners, and are well known to the general trade. They can be of great benefit to the general welfare and on their efforts much depends.

"Who are these bedecked gentlemen?"

"They are the elect of the Hardware Club. Its Board of Governors."

Duly decorated with silk badges, they and the Reception Committee have the entree to the hands of the guests and use their time before the dinner in introductions.

When the first dinner was to be held Sherry asked: "What time is the dinner announced?"

"Seven o'clock."

"Shall we have it ready to serve at 8 o'clock?"

"You have the doors open at 7:15 and we will go in."

"If you do you will beat the record, for it has never been done at a large dinner in New York."

When the time came the doors were opened and in walked 425 guests. The record was broken, and the Hardware dinners are now known for their punctuality among other many good features.

On such occasions the scene bewilders old timers, and their minds run back to the days of clerkship when cruller foundries and pie factories were the principal caterers. But now what a change has come over us!

After the invited guests have taken their places on the dais, and the governors have found their places at the heads of the tables, the others come in and all are ready for the feast so happily begun.

"What's the matter with the chairman, certainly everything is all right and every one pleased?"

No, some one has remarked he does not like his corner seat. Another is a little deaf, and is too far from the speakers. Another sees a person near him whom he wishes was further.

This is the burden the chairman anticipated and dreaded. He did the best he could, but some one must take the brunt. Former friendships are broken for supposed intentional acts, and the next year sees the aggrieved absent, and their places taken by others.

The arranging of the seats at the tables is harder than all the other work combined, and requires exactness, for there is the liability of some name being left out of the arrangement and the consequent leaving off the name from the menu card. The reading of the printer's proof and checking the names calls for work during the owl's hours, and is a constant anxiety.

All the menu cards at our dinners have had the names of the guests and the houses connected with. The preparation of this entails a great deal of work and requires careful study, so that no name shall be left off, and if such a serious mistake happens, woe betide the responsible agent, for the "out" will not appreciate why he of all others should be left off.

A nuisance is the late applicant for a ticket, who cannot see why the tables cannot be rearranged so he can sit with his friend. How often have I heard "Transfer him, he won't care," but what does the "transferred" think when he sees his name printed at another table, and what can the chairman say to his inquiry, "Why was I made a shift?"

Between the time of arranging the tables and the hour of the dinner, the surveying of the work must be done and the small items attended to. There must be provided rooms at a hotel for the out-of-town guests, carriages for the city guests, and silk badges for the committees, with their title painted on each.

It is wise not to vary the programme as planned, for invariably the added features will take from the pleasure of the whole. The dinner committee is always besieged by those who "have a great reputation (at home) for their wonderful talent." The impromptu speaker is also an enemy, under whatever disguise he may appear. Let them alone. It is only necessary to imbue your engaged speakers with the fact that speeches of substance, with sufficient sparkle, are wanted, so that the recollections will go back with pleasure. We could call the roll of speakers we have had, and point with pride to what they said.

A question always mooted at public dinners is whether wines shall be sold a la carte, or included in the price of the tickets. I have always been an earnest advocate of the a la carte, for under this plan the sale of wines is limited to regular users, and young men who might use it if free,

Digitized by Google

hesitate to order it over their signatures. The result has been the opinion has often been expressed at our dinners that the condition of the guests was a striking contrast to the guests of the majority of public dinners with free wines. I would recommend this policy to our Hardware Associations in other localities, be they national or local, feeling assured they will meet with the hearty approval of their members, be they hard shells, moderate drinkers or temperance advocates. Besides, there is another very important feature that enters into the question, and that is the quality of the menu which is very materially affected by "with" or "without." Also the cost of the tickets can be put at a price reasonable for all, and insures a larger demand. This whole subject has recently been before one of our large Associations, whose last dinner included free wines which led to free speech and a free break-up. In future their policy will be changed.

To sum up with, I advise:

"Get through at a reasonable hour."

"Try to vary the trade magnates who sit at the guest table. Spread the honors around."

"Have music of good quality and intersperse with popular airs."

"Have no penuriousness in money matters; neither extravagance. The best is none too good."

"Music, flowers and decorations, secure free if possible, but if have to pay for get a 'tack' discount. Pay for as little as possible, but neglect nothing."

"Do not guarantee number of guests up to the number of tickets sold. Leave a good margin for absentees and notify exact number as late as possible."

The aftermath will bring a variety of fruit; criticisms against the work of the committee, congratulations from others, and the rejoinder from those who have done the work, "Well, every year we learn and next year we will ——." And as President McCartee says, "And so we go."

Alfred D. Clinch.

New York City.

Hardware Jobbers' Association of Pittsburg.

Editor Hardware: The geographical territory covered by our Association is Pennsylvania, west of Harrisburg, Ohio, east and southeast of Columbus, West Virginia, parts of Virginia, Maryland and Kentucky.

The first steps towards organization were taken in casual meetings early in 1892, and made more manifest through a banquet tendered the jobbers of Pittsburg, Allegheny and Wheeling by the jobbers of Cleveland, in the spring of that year, which was a happy occasion, and brought about a good feeling between the houses taking part. The Association was organized July 20, 1892, with the following membership:

Logan, Gregg & Co.; Wharton, Bakewell & Co.; Jas. C. Lindsay & Co.; Bindley Hardware Co.; Jos. Lautner & Co., Allegheny; Ott Bros. & Co., Wheeling, who subscribed to the rules and by-laws.

The election of officers for the last year resulted as follows:

President: W. C. Reitz.
First Vice-President: W. P. Heiskell.
Second Vice-President: J. H. Gettleman.
Secretary: Samuel J. Davis.
Treasurer: Thomas A. Parke.

At this meeting, as well as the preliminary ones previously held, there was manifested the very best of feeling, which has been well sustained since that time. The late Thos. A. Parke, of Logan, Gregg & Co., who died in November, 1895, was an active participant in the meetings, and always a strong advocate of Associations. The late Jas. C. Lindsay, for some time prior to his death, displayed quite an interest in the Association, and, like Mr. Parke, was a man of strong convictions, of marked ability, and possessed the faculty of expressing himself clearly, and always to the point. Others invariably present at meetings in those days were: Thos. McMurray, of J. C. Lindsay Hardware Co.; Chas. Wharton, Jr.. of Wharton, Bakewell & Co.; J. H. Gettleman, of Jos. Lautner & Co.; W. P. Heiskell, of Ott Bros. & Co., and the writer.

The meetings are interesting; a number of them quite so. We recall one held at the handsome suburban home of W. P. Heiskell, of Wheeling, on November 1, 1892, the members from Pittsburg present being Thos. A. Parke, Chas. Bakewell, Jas. C. Lindsay, Secretary S. J. Davis and the writer; from Wheeling: M. L. Ott, W. P. Heiskell and Wm. Cruikshank (now deceased), of Greer & Laing. Mr. Heiskell had also as guests Messrs. Geo. T. McIntosh and G. W. Avery, of Cleveland. Our host treated us royally on that occasion. The business meeting in the afternoon was a long and spirited one, all present taking part and many points of interest were freely discussed. Our friends from Cleveland returned at night with the Pittsburg men, and were their guests at dinner at the Duquesne Club, before leaving for home. This was the only meeting held outside of this city. Since the deaths of Messrs. Parke and Lindsay, Robert Repp usually represents the Logan-Gregg Hardware Co., and A. J. Bihler the Jas. C. Lindsay Hardware Co. Meetings of late have not been held regularly, but as occasion demanded, although it is now proposed to re-establish fixed dates, and it will, no doubt, be done. The present officers are:

President: W. C. Reitz.
Vice-President: Thos. McMurray.
Treasurer: Geo. B. Logan.
Secretary: J. O. Fitzsimmons.

The membership constitutes: Jas. C. Lindsay Hardware Co., Logan-Gregg Hardware Co., Bindley Hardware Co., Lautner Hardware Co., Ott Bros. & Co., Wheeling.

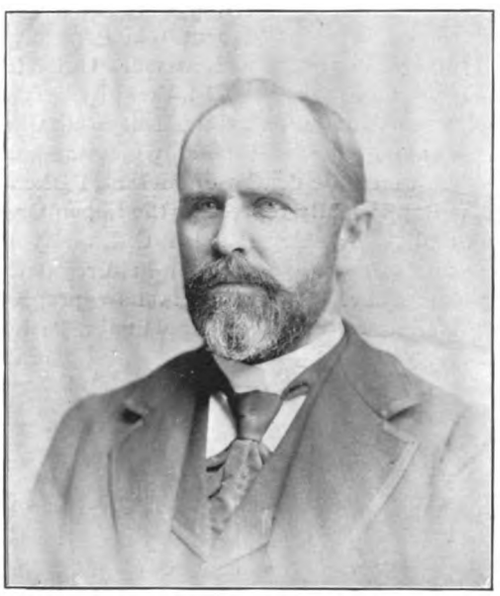
There is no good reason why the Association should not be of great service to its membership and the trade in the future. It has been of benefit in the past, and by the exercise of an active interest on the part of its members, the very best results will attain.

Very truly yours,

W. C. Reitz,
President Pittsburg Hardware Jobbers' Association.

Pittsburg, Pa.

American Files Abroad.



In reference to an article in a previous issue of *Hardware*, headed "Sending American Files Abroad," Hugh McCaffrey, president of the McCaffrey File Co., Philadelphia, has called the attention of the representative of *Hardware* in Philadelphia, to some interesting points. Said Mr. McCaffrey: "We believe we were the first pioneers in that line by starting in with South America, Canada and other places, over fifteen years ago. Within the last ten days we have sent to Germany 1592 dozen, and have now under way orders for a much larger number. Within a few years our goods have acquired a reputation in Europe almost as great as in our own country, and our mail every week contains inquiries for prices and terms from the Continent." These facts are certainly of interest, showing as they do that American files are cutting their way, with good teeth and temper, into the business of the Old World.

The street railway company of Woonsocket, R. I., has given orders that no car is be propelled within 100 feet of any bicycle which may be in front of it in the highway, and cars must be stopped until bicycles moving in the opposite direction have passed. These very uncorporation-like orders are the result of a judgment for $8000 awarded by the Supreme Court to a man who was struck by a car while riding a wheel.—*The Bicycling World.*

SOUTHERN HARDWARE JOBBERS' ASSO

Editor Hardware: From the best information I can obtain, the jobbers of Knoxville formed a local association in the year of 1888, and worked together for about three years, when the idea of forming a State Association was conceived, whereupon, they entered into correspondence with the jobbers of Tennessee, and called a State meeting September 30, 1891, when a constitution and by-laws were

G. W. BARNETT, PREST. SOUTHERN HARDWARE JOBBERS' ASSO.

adopted and a permanent Association was formed, the following firms being represented:

From Knoxville, Tenn.: W. W. Woodruff Hardware Co., C. M. McClung & Co., George Brown and S. B. Luttrell & Co.

From Chattanooga, Tenn.: Vance & Kirby, and the Carter-Magill Hardware Co.

From Memphis, Tenn.: Orgille Brothers & Co., Langstaff Hardware Co., Cousens, Matthews & Ramsey.

From Nashville, Tenn.: Gray, Fall & Co., Dudley Brothers, Buford Brothers, Pollard, Black & Co., and Bransford Hardware Co.

These firms may be termed the charter members of the Association. After some discussion, it was suggested that the name of the organization be changed from the Tennessee Hardware Association to the Southern Hardware Jobbers' Association, as the interest of the Southern jobbers was parallel with that of the firms represented. At this meeting the following officers were elected:

President: W. E. Gibbins, of W. W. Woodruff Hardware Co., Knoxville.

First Vice-President: A. D. Langstaff, of Langstaff Hardware Co., Memphis.

Second Vice-President: R. H. Dudley, of Dudley Bros., Nashville.

Secretary: W. P. Smith, of C. M. McClung & Co., Knoxville.

Treasurer: J. C. Vance, of Vance & Kirby, Chatanooga.

The second annual meeting of the Association was held at the Gayoso Hotel, Memphis, on April 22, 1892. After a two days' session, the meeting adjourned, having elected the following officers for the following year:

President: W. E. Gibbins.

First Vice-President: A. D. Langstaff.

Second Vice-President: W. A. Chenoweth, Francis-Chenoweth Hardware Co., Birmingham.

Secretary: W. P. Smith.

Treasurer: J. C. Vance.

Executive Committee: W. A. Gregg, of Atlanta, for Georgia; O. B. Barker, of Lynchburg, for Virginia; C. H. Ireland, of Greensboro, for N. Carolina; J. J. Wescoat, of Charleston, for S. Carolina; Lee Richardson, of Vicksburg, for Mississippi; J. J. Mandlebaum, of Little Rock, for Arkansas.

The third annual meeting of the Association was held in the city of Atlanta, on April 25, 1893, and the sessions continued on through the following day and the following officers elected:

President: A. D. Langstaff.

First Vice-President: W. A. Chenoweth.

Second Vice-President: W. A. Gregg.

Secretary: W. P. Smith.

Treasurer: J. C. Vance.

Executive Committee: C. H. Watkins, of Richmond, for Virginia; C. H. Ireland, of Greensboro, for N. Carolina; J. J. Wescoat, of Charleston, for S. Carolina; J. J. Mandlebaum, of Little Rock, for Arkansas; Lee Richardson, of Vicksburg, for Mississippi; C. H. Hulein, of Louisville, for Kentucky.

The fourth annual meeting of the Association was held in Richmond, Va , on June 5, 6 and 7, 1894, and the following officers elected:

President: A. D. Langstaff.

First Vice-President: W. A. Chenoweth.

Second Vice-President: W. A. Gregg.

Secretary: W. P. Smith.

Treasurer: O. B. Barker, of Bell, Barker & Jennings, Lynchburg, Va.

Executive Committee: J. J. Mandlebaum, of Little Rock for Arkansas; J. B. Yerkes, of Jacksonville, for Florida; C.

C. B. CARTER, SEC.-TREAS. SOUTHERN HDW. JOBBERS' ASSO.

F. Huelin, of Louisville, for Kentucky; C. T. Jenkins, of Baltimore, for Maryland; Lee Richardson, of Vicksburg, for Mississippi; C. H. Ireland, of Greensboro, for N. Carolina; J. J. Wescoat, of Charleston, for S. Carolina; Geo. E. Hardwick, of Sherman, for Texas.

EX-VICE-PRESIDENT J. D. MOORE.

COL. EDWARD BUFORD.

The fifth annual meeting was held in Louisville, on the 11th, 12th and 13th of June, 1895. The officers elected were:

President: J. S. Brown, Knoxville, Tenn.

First Vice-President: J. D. Moore.

Second Vice-President: Chas. H. Watkins.

Secretary-Treasurer: C. B. Carter, Montgomery, Ala.

Executive Committee: J. S. Brown, C. H. Ireland, W. E. Gibbins, J. J. Mandlebaum, Geo. E. King.

The sixth annual meeting was held at Lookout Mountain, on the 13th and 14th of May, 1896. The officers were:

President: W E. Newill, of King Hardware Co., Atlanta, Ga.

First Vice-President: C. H. Ireland, of Odell Hardware Co., Greensboro, N. C.

Second Vice-President: J. J. Mandlebaum, of Fones Bros Harkware Co., Little Rock, Ark.

Secretary-Treasurer: C. B. Carter, of 65 Peachtree Street, Atlanta, Ga.

Executive Committee: W. E. Gibbins, of W. W. Woodruff & Co., Knoxville, Tenn.; G. W. Barnett, of Teague, Barnett & Co., Montgomery, Ala.; W. A. Parker, of Beck & Gregg Hardware Co., Atlanta, Ga.; Fred Orgill, of Orgill Bros. & Co., Memphis, Tenn.

The seventh annual meeting was held at Savannah, on the 12th, 13th and 14th of May, 1897. These officers were elected:

President: G. W. Barnett, of Teague, Barnett & Co., Montgomery, Ala.

First Vice-President: J. J. Mandlebaum, of Fones Bros. Hardware Co., Little Rock, Ark.

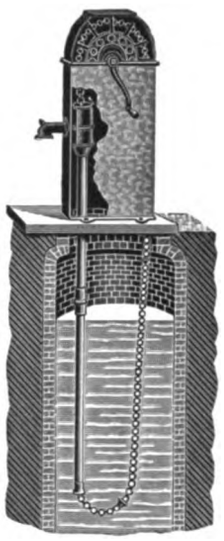
Second Vice-President: John Donnan of W. S. Donnan & Co., Richmond, Va.

Secretary-Treasurer: C. B. Carter, Montgomery, Ala.

EX-VICE-PRESIDENT CHARLES H. WATKINS.

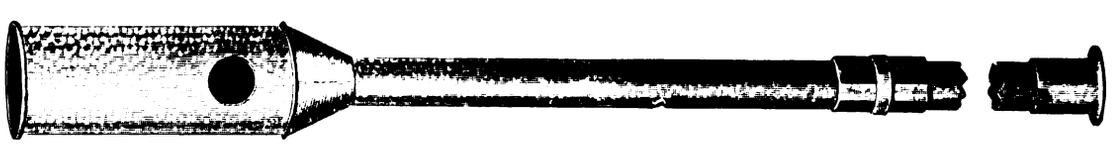
EX-PRESIDENT J. S. BROWN.

Digitized by Google



Executive Committee: W. A. Parker, of Beck & Gregg Hardware Co., Atlanta, Ga.; W. E. Gibbins, of W. W. Woodruff & Co., Knoxville, Tenn.; J. D. Moore, of Moore & Handley Hardware Co , Birmingham; A. B. Palmer, of Palmer Hardware Co., Savannah.

The local Association in Knoxville was, perhaps, originally organized with the view of regulating competition and controlling prices. However, after some trial of this on a wider scale, it was discovered that this was a very difficult thing to do, and a very little effort is made in this direction by the Association to-day. However, many benefits have accrued in the way of bringing about a better acquaintance among the Hardware jobbers in the territory represented, many of them, prior to the formation of association, being almost total strangers to each other and known only in name. Now, then, since they have had a number of annual meetings, they know each other personally and have learned to have a high regard for each other, and have turned their efforts in the direction of improving their business methods, and we venture to say that since the formation of this Association that the business methods of the Hardware jobbers have been very much improved. They are no longer afraid to interchange their experiences, to tell wherein they have found weak points and also good points, so that the members of the Association, if they will, have the opportunity to learn by the experience of others instead of having to go through an experimental stage in everything themselves, and in this way, much good, we feel, has been accomplished through the Hardware Association. At the time of the original organization of this Association, there were very few Hardware associations in the country, but the spirit seems to have grown—the idea seems to have been a good one, and now Hardware associations are formed in almost every State in the Union where much business is transacted, and the Southern Association feels some sense of pride in having been among the leaders of such an idea. The influence has not been confined to State lines, nor even to the United States lines, as we learn that a representative from Great Britain, upon a visit to the United States, had some conference with a representative of the National Hardware Association, and conceiving the idea to be a good one, returned home and organized a similar institution in his own country, so we see that our influence has gone beyond the ocean. There must be something good in it or it would not travel so far. To-day the Southern Hardware Jobbers' Association, we believe, is one of the largest in the country, outside of the National Hardware Association and covers a territory from Maryland to Kentucky and from Florida to Texas. We trust that it will go on in prosperity and that the good work it is now doing will continue many days hence. J. D. Moore.



Birmingham, Ala.

Galvanized Steel Pump Tubing.

The Quincy Hardware Mfg. Co., Quincy, Ill., are having very marked success with their new Galvanized Steel Chain Pump Tubing, of which we show two electros. This tube is made of the very best galvanized sheet of heavy gauge and seamed water tight. The reservoir at the top is also seamed together and to the tube, and not depending upon solder in any way, so that ice and frost cannot break it loose. The joints are put together with galvanized couplings, as shown, and it has a bell-shaped cast foot for the protection of rubber buckets. It is claimed that "this tube is superior to the wood tubing now in use, because the wood tubing being placed in a well or cistern where it has no sunlight or ventilation, will become covered inside and out with a bacteria slime that is very injurious to health and disagreeable to taste and smell. Also that the wood tubing becomes water soaked so that it is almost impossible to lift it out of the well. The galvanized steel tubing remains as clean and wholesome as a drinking vessel. It is

perfectly smooth on the inside so that the rubber buckets will not wear, as they do with the wooden tube. It is light and easily lifted out of the well and is practically indestructible. They make it in lengths of 4, 5, 6, 7, 8, 9 and 10 feet.

Multiplication of Explosives.

The ingenuity that has been exhibited of late years in the discovery and application of explosives for mining purposes has really been remarkable, and not less so has been the growth of the trade in explosives during the period of twenty years since the English act of 1875 came into operation, says the *Trade Journals Review*. Not only has the number of factories more than doubled, but the number of persons employed in them is now over 10,000, which shows an increase of nearly 3000 even during the last ten years. This increase follows naturally on the increase in the number of nitro-glycerine compounds in the market and the introduction of smokeless powders. Four new factories have been licensed during 1895 and 113 since the act came into operation, or more than double the number of factories existing at the passing of the act. The net increase is 79 factories, or an average of 3.95 annually. While the number of factories in which gunpowder and nitrate mixtures may be made has remained stationary during the twenty years, the number in which nitro-glycerine compounds may be made has risen from one to nine, and whereas dynamite was the only nitro-glycerine compound produced in 1876, there are now twelve such compounds licensed. The gun-cotton nitro-compounds, which include nearly all the smokeless powders, were nine in 1876, and are now twenty-nine. Similarly, the fulminate of mercury factories have increased from two to six.

The Morse Wool Treating Co. have just completed, at Norton, Mass., an extensive plant for purifying wool. The buildings are of a very substantial character, entirely fire-proof, and were designed and built by the Berlin Iron Bridge Co., East Berlin, Conn. The floors throughout the whole plant are of beams and corrugated iron arches, to carry the excessive loads common to warehouse construction. The roofs are of the well-known Berlin Iron Bridge Co.'s patent anti-condensation corrugated iron.

CLOTHES WRINGERS AND WRINGER ROLLS.

The Clothes Wringer is one of the most successful labor-saving devices that has ever been invented, and ranks well with the sewing machine. Thirty years ago the business was in its infancy; to-day it is one of the largest industries of the country, the aggregate output of the clothes wringer manufacturers in the United States being over one million machines a year.

The largest manufacturers in this line of business are The American Wringer Co., No. 99 Chambers Street, New York. The paid-in capital of the company is $2,500,000.00, and they have a capacity for turning out 3500 complete wringing machines per day, and 8000 rubber rolls per day, sending their goods (both wringers and rolls) to all parts of the world.

The officers of the company are: Joseph Banigan, president; W S. Ballou, Secretary; George Reuter, Jr., general manager; G. H Jantz, Assistant general manager.

"IT'S ALL IN THE RUBBER."

The value of a clothes wringer depends entirely upon the quality of its rubber rolls, as a wringer with poor rolls in it is worth next to nothing. To wring the thin as well as the thick parts of clothing dry, the rolls must be soft and elastic, and when made soft and elastic, in order to stand the strain, they must be made of good rubber. The harder the rolls the cheaper they are, and the more buttons they will break and the more clothes they will wear out and destroy. The American Wringer Co 's warranted rolls are made of good rubber; therefore, they will wring the clothes dry and wear well You can tell them by the touch; as they say, "It's all in the rubber." See stamp on rolls.

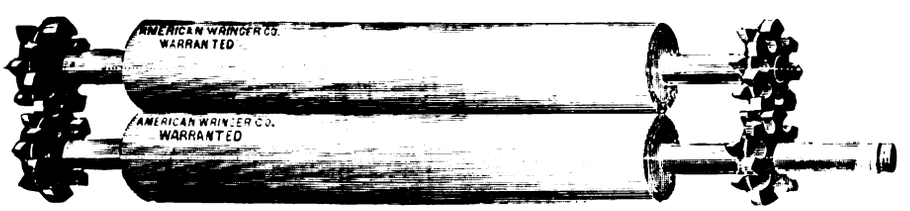

FIG. 1 ROLLS.

So-called good wringers are frequently sold without the maker's name on the rolls, and purchasers are thereby deceived into paying a high price for a poor article. The principal item of cost in a wringer being the rolls, if they are of good quality the manufacturer of the wringer should not hesitate to have his name and warrant on them.

A recent improvement has been the introduction of the

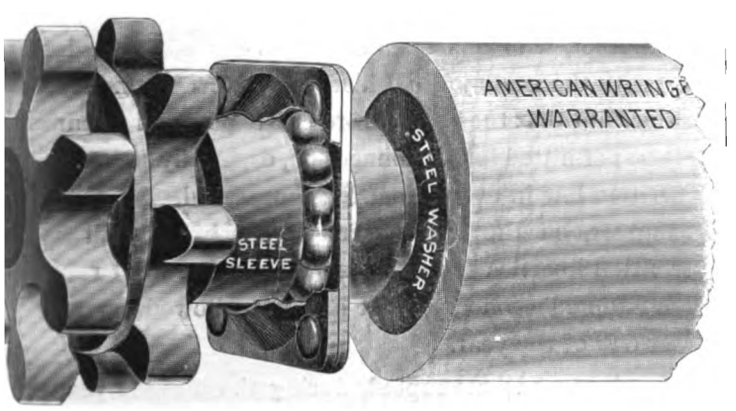

FIG. 2.—BALL BEARINGS

ball-bearing principle to the Universal, Novelty and Gem brands of wringers. This ball-bearing is constructed upon scientific principles, and it is as near anti-friction as it is possible to make a journal bearing.

It is arranged so as to give a four point contact for the balls, which reduces friction to the minimum. All parts are made of the best material, especially selected for their wearing qualities.

Another well-known machine manufactured by this company is the Empire Wringer. This machine is fitted with purchase gear arrangement, which causes the rolls to turn with half the labor that is required for wringers that have the ordinary friction bearings. The arrangement of the cog-wheels is such that they always remain in gear, no matter what thickness of clothing may be wrung, thus saving the rolls from great strain.

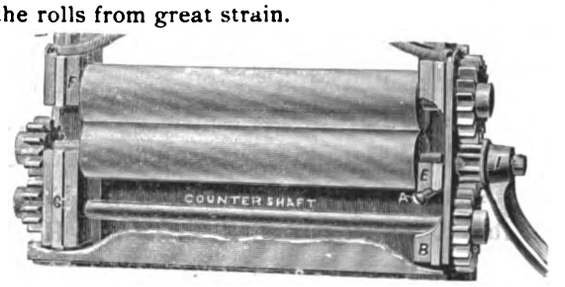

FIG. 3.—EMPIRE PURCHASE GEAR.

THE "ROYAL" WRINGER.

"A veritable 'King' of Wringers. Warranted for five years."

No better proof of the confidence of the manufacturers in the sterling qualities of this wringer can be asked, than the fact that each and every one of these "Royal" wringers is warranted for five years from the date of purchase, and a certificate of warranty is given with every machine.

Nothing better in the way of a clothes wringer has ever been produced. Every part is made, examined and tested with a view of securing the longest possible wearing qualities.

The "Royal" rolls (specially branded), are made of Para rubber without the admixture of any inferior grade; they

WARRANTY.

This ROYAL Clothes Wringer, No is warranted by us for five years from date of purchase for family use.

If any part breaks or wears out during said time, we will replace the same free of charge.

"HARDWARE'S" EIGHTH ANNIVERSARY.

On this date, April 10, 1898, *Hardware* has reached the eighth anniversary of its birth, and feels justified, under the circumstances, in doing a little celebrating upon its own account

It has seemed fitting to commemorate the occasion by the publication of a special issue devoted to the Hardware Associations of the United States; and the number which has been produced in accordance with the decision, is permitted to speak for itself.

On April 10, 1890, the first issue of *Hardware* appeared. At that time there were a number of journals which paid more or less attention to the Hardware industry, in connection with other departments in the line of iron manufacturing, or metals, but there was none which devoted itself entirely and distinctively to the great Hardware interests of America. In the initial number, it was declared that: "The Hardware dealer needs a journal which shall record new inventions, while reporting the prevailing prices for goods already in the market, and which shall be an exchange for experience and suggestions by retailers. It should be a journal also, through which the Hardware manufacturer can readily attract the attention of the jobber and retailer to his wares, and from which the inventor may derive suggestions of new mechanical wants to be filled. Last, but not least, the representative Hardware journal should be written for a national circulation, so that whoever would speak to the trade through it, can hope to cover the whole country. Such is the field which the publishers of *Hardware* have defined for it."

From that initial number to the present, *Hardware* has endeavored to carry out the purpose enunciated in this preliminary declaration. How well it has done so, is left to the decision of the trade at large, whose interests it has endeavored to forward and assist in all possible ways. That it has succeeded beyond the most sanguine expectations of its founders, is a matter of common knowledge and those who have its interests in hand to-day, desire here to acknowledge that this success could not have been achieved, were there not a field and a demand for a journal of this character, and had not the trade everywhere extended to it a loyal, earnest and generous support.

Hardware was the creation of the foresight and earnest industry of Archibald Paull Mitchell, its chief owner and original manager. Mr. Mitchell threw into the enterprise the full strength of his powerful personality, and gave to it his untiring efforts; and when, in the early days of 1896, he was suddenly called from the scene of active and successful labor, he left behind him a journal which had passed the danger-line, and the success of which was already abundantly secured. It is a matter of great gratification to those who stood so close to Mr. Mitchell in his labor, and who possessed his confidence, and had always been sure of his generous endorsement, that the large measure of good-will which the trade held for Mr. Mitchell, was continued in aid of the work which he had had in hand.

Mr. Mitchell had charge of the management of *Hardware* from the beginning. Its editorial columns were ably controlled by Hawthorne Hill until September, 1891, when he resigned that position, and was succeeded by James H. Kennedy, who had been for a number of years actively identified with the daily press of Cleveland and New York. On the death of Mr. Mitchell, the business responsibility of the office, which had been partially borne by Mr. Kennedy for some time, was transferred entirely into his hands by his election as manager, while still continuing in the position of editor. The editorial force was strengthened by the addition of Henry Hopkins as associate editor and advertising manager. Mr. Hopkins was known to the trade everywhere as an active Hardwareman of many years' experience. He was also known as a writer of considerable repute, especially on Hardware topics, his contributions for several years past to *Hardware*, the *Iron Age* and other journals having been accepted as the well-presented and authentative statement of a business man who knew concerning that of which he spoke, and who also possessed a literary skill enabling him to present this knowledge in the best possible manner. Among the other members of the staff is Fred A. Caton, assistant business manager, who has had wide experience in various directions in connection with newspaper publishing. The faithful secretary and treasurer from the beginning has been E. N. Root, who has been identified for two decades past with the trade journal history of New York. We feel certain that these few words of a personal nature will be permitted in this connection, especially as it is an unwritten law in every American household, that every youngster, on the anniversary of his birth, shall be permitted liberties and concessions from the strict rules of household economy, that are not allowed on any other day of the year.

Hardware has attempted, during these eight years of its existence, to make itself useful in connection with the trade, in every possible respect. It certainly has demonstrated its interest in the formation and suc-

cess of organized effort within the trade, and its part in connection with the giving of the first Hardware dinner of 1892, out of which the Hardware Club of New York has directly grown, has not been forgotten. It has done everything within its power to disseminate knowledge which should be of interest to the trade and to cause the trade to branch out into other lines which might be remunerative, such as the handling of bicycles and other articles which legitimately belong to the trade, but which have not always been considered a part thereof. We may be permitted to say further, in this connection, that the success which has crowned the efforts of *Hardware* in a business way in the past, seems thoroughly promised for the future, as it never was in a more prosperous and healthful condition than at the present day. There has nothing been left to ask for in the way of business support from the trade at large, and we do not recollect a single instance where we have asked a favor editorially or otherwise, of any member of this great representative trade, that the same has not been granted.

In conclusion, we wish to tender our most sincere thanks to all who have aided us in any way, and desire here to place ourselves on record as pledging *Hardware* to work more earnestly and strenuously for the good of the trade in the future, than it has been permitted to do in the past.

Reading Hardware Exchange.

Editor Hardware: The Hardware Exchange, of Reading, Pa., is composed of the wholesale dealers of Reading. We organized in November 18, 1893, with the following firms: Bright & Lerch, Ltd.; Stichter Hardware Co., Ltd.; Bard, Reber & Co; J. H. Obold & Co., and Hoff Bros.

At our first meeting there was a committee appointed to draw up by-laws and rules and regulations, which were adopted at the next meeting, and the following officers were elected:

President: D. D. Lerch, of Bright & Lerch.

Vice-President: J. G. Klopp, of Stichter Hardware Co., Ltd.

Secretary and Treasurer: Geo. W. Bard, of Bard, Reber & Co.

Chairman of Prices: A. B. Stein, of Stichter Hardware Co., Ltd.

We hold monthly meetings to discuss matters belonging to the Hardware business, and also have a banquet on the same night, as we have learned nothing creates more sociability than a banquet.

We have not, as yet, increased our membership, but have tried on several occasions to induce the neighboring towns of Lancaster, Allentown and Lebanon to join. We had the Hardwaremen of Lancaster and Allentown attend one of our meetings, and they were very much impressed with the good feeling, sociability and brotherly love the members of the Hardware Exchange had showed one another, and promised to join us in a short time.

We also paid a visit to Allentown, and were entertained in a very pleasant manner, visiting the Hardware stores, wire mills, etc., and had their promise when we left, that they would organize at once, but it never came. We also paid a visit to Lancaster, and had the same pleasant meeting, and their promise to form an exchange, which they did, but, sorry to say, it only lasted two or three months, and their noble work was ended.

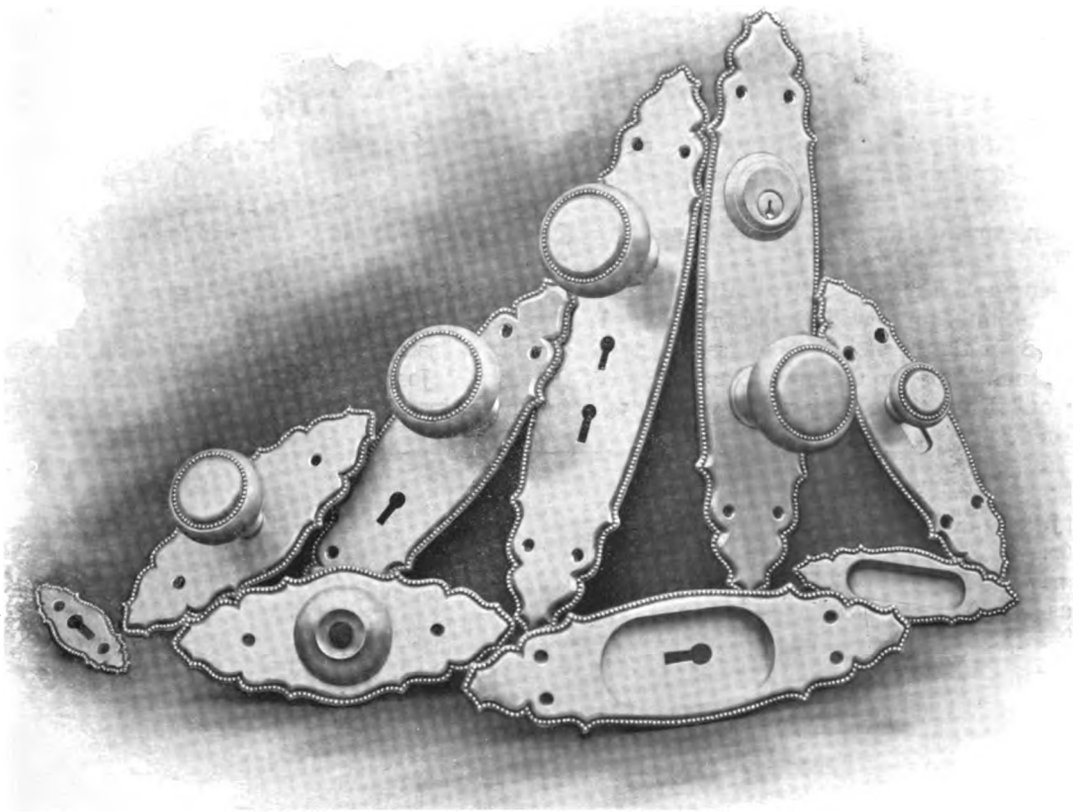
The principal object of our Exchange was to create a better feeling, and to be more friendly, and avoid the jealousy which the unnecessary cutting on some classes of goods which were always sold at cost and below cost. Our meetings are attended by twelve to eighteen members, representing the different firms. After the business and banquet we are always entertained for a few hours by speaking, singing, etc., by the members.

Truly yours,

Reading, Pa. A. B. Stein.

Western New England Association.

Reference has been made elsewhere, to the Western New England Iron & Hardware Association, as laboring in connection with the New England Iron & Hardware Association. This was the direct outcome of the fraternal movement which was fully under way at the date named, in 1894, when R. J. Woodruff, of the firm of C. S. Mersick & Co., New Haven, Conn., paid a visit to Boston and became greatly interested in the workings of the Association in that city. What more especially struck him, were the results from the bureau of credit and information. He at once set himself to work among the dealers in Hardware and iron in Western New England, and his labors eventuated in a call to all the dealers in Connecticut and Western Massachusetts, to meet at the Republican League Club House of New Haven, on February 16th. In response to this invitation, fourteen Hardware dealers were present. At a meeting held in New Haven on April 13th, the Association was formally organized and the following officers were elected:



President: L. L. Ensworth, Hartford, Conn.
Secretary: R. S. Woodruff, New Haven, Conn.
Treasurer: C. C. Lewis, Springfield, Mass.

As stated by the president, the object of the Association was "Not so much to combine and regulate prices, as to create social and friendly feeling among the members. At the time of our first meeting, we found many older dealers in iron and steel in this section, who had been competitors for twenty-five years, but who had never had the pleasure of meeting, being known only to each other by sharp competition and the cutting of throats whenever the opportunity offered. By getting together and becoming better acquainted, we expect to do away with petty jealousy, and lead each dealer to place more confidence in his competitors." That this purpose has been well accomplished, the history of the Association shows.

E. T. Barnum, Detroit, Mich., the extensive manufacturer of wire, iron and brass work, has recently made another large addition to his business by purchasing the entire business of the American Brass & Metal Works of that city. This addition greatly increases Mr. Barnum's facilities for the manufacture of his line of goods, and he is better prepared than ever before to fill promptly all orders for bank and office railings, elevator enclosures, and cars, fire escapes, jail cells, stable fixtures, lawn furniture, iron and wire fencing, etc., etc. We are informed Mr. Barnum is about to issue a handsome catalogue of new designs, which will be mailed to parties interested.

The Berlin Iron Bridge Co., East Berlin, Conn., have the contract for building a new power house, car barn and steel bridges for the Port Jervis Electric Railway Co., Port Jervis, N. Y. The buildings will be of a very substantial character, entirely fireproof, covered with the Berlin Iron Bridge Co.'s patent anti-condensation corrugated iron. The bridges are plate girder type constructed in a substantial manner for carrying the heaviest loads.

"High Grade" applied to Sargent's Artistic Hardware means that no better goods are made. They are intended for use in buildings where the best is required, and the best should be required in all buildings. Daily use does not injure good hardware, and locks and trimmings made by us will stand the wear and tear in the home or store, the office or shop, the school or church. The day of poor hardware for good buildings is past.

In the North, in the South, in the East and in the West buildings of all kinds have been trimmed with Sargent's Artistic Hardware. Among Home-builders especially it has a strong hold. Everywhere the story is the same—it gives satisfaction.

The Hardware dealer should sell goods that give satisfaction If your customer is convinced of the merits of Sargent's Artistic Hardware, he will not be satisfied if you substitute something else. Give him Sargent's when he calls for Sargent's and he will be pleased and you know "the best advertisement is a pleased customer." Besides it is easier to sell goods that are called for—goods that your customer believes are the best—goods that are the best.

Sargent's Artistic Hardware is well advertised—another reason why the dealer should sell it; it's easy to sell goods that are well advertised.

If you want information as to Sargent's Artistic Hardware, your inquiry will meet with a prompt response.

SARGENT & CO., NEW YORK.

The change of base as to business location of this well-known firm, from the familiar Hardware haunts of Chambers Street to a location four blocks further uptown, in Leonard Street, is an event worthy of a passing historical notice.

In 1853, when George Henry Sargent came from Massachusetts, his native State, to New York City and joined his brother Joseph B. in the Hardware business, they occupied very humble and limited quarters in the third loft of No. 24 Cliff Street. From there they removed, in 1854, to No. 85 Beekman Street, where, in 1856, Thos. J. Atkins and William J. Ladd, and, in 1860, George Munson, joined them as assistants. From No 85 Beekman Street they removed, in 1863, to No. 70 Beekman Street, where they remained until 1875, when they removed to No. 37 Chambers Street, extending in 1879 to No. 35, and in 1890 included No. 33.

GEORGE HENRY SARGENT.

These three stores they now vacate to take possession of their new and more capacious premises in Leonard Street.

In the "Encyclopedia of Biographies of the Successful Business Men of America" (1895), the editor, in describing the progress and growth of Hardware manufacturing in this country, says: "But little Hardware was made in this country in the early fifties, but now the reverse is true, and this assertion can have no illustration more marked and convincing than the fact that the original shop of the Sargents, in New Britain, at that time was but a 'Wart on Olympus' compared with the present extensive works in New Haven, established in 1863, under the control and management of J. B. Sargent, which, enlarged and extended from time to time, now stand as a monumental instance of the progress and growth of American manufactures during the past half century."

The business of Sargent & Co , New York City, is largely confined to the sale of the ever-increasing variety of Hardware made at the different factories with which they are connected, yet they are distributors of such articles produced by other manufacturers, as are requisite for a complete assortment in any line of their own production.

For many years George H. Sargent, with his brothers, Joseph B and Edward, was engaged in the manufacture of "Hand Cards," used for carding cotton and wool by hand, at their factory in Leicester, Mass., a town noted for more than a century as of the original continuance of the card-making industry. This business was inherited from their father, Col. Joseph Denny Sargent, whose name, as a careful and painstaking manufacturer, was widely known and highly honored by all dealers in those articles of domestic economy. His grand son and namesake, a son of Joseph B. Sargent, of New Haven, is associated with his brothers, Henry B., Edward, Lewis and Russell in the management of the New Haven factories.

Messrs. Atkins, Munson and Ladd, to whose fidelity, diligence and sagacity is due much of the success and prosperity of Sargent & Co., are still prominent in the management in their various departments, of the affairs of the company.

It is a rare occurrence that four (including Mr. Sargent) persons continue together in business for a period averaging more than forty years.

Mr. Sargent, in a personal and business way, stands very high in the respect and good will of the Hardware trade of the country. He is an active member of the Hardware Club of New York, having been elected a member of its board of governors on the death of the late first president, William H. Williams, and at the recent annual meeting of 1898, was unanimously elected vice-president of the club. In all questions which affect the good of the club, he shows those high qualities of business administration and good judgment, that have been so conspicuous a portion of his business career.

A view of the new quarters of this great and enterprising Hardware house, will be found upon the page opposite.

Sargent & Co.,

Forced by increasing business, and the consequent requirement of more extensive premises, have removed their business from the store they occupied in Chambers Street, to the commodious and substantial eight-story building known as the

John Sargent Building, Nos. 149, 151, 153 Leonard Street,

wherein are offered superior facilities for receiving, storing and delivering the productions of their numerous manufacturing establishments.

The sales-room and general offices in their new store, occupying two floors, are unexcelled in beauty of finish and convenience of arrangement special attention being given to the room where is displayed their great variety and beautiful designs of their "Artistic Hardware" in the line of door and window trimmings.

Planes that Stand the Test.

Every mechanic wants to use the best Planes and every hardware dealer should sell the best. Sargent's Iron and Wood-Bottom Planes are fully warranted tools that will stand the daily test of the work-bench. They are thoroughly made, only the best material entering into their construction. They are mechanically perfect, fitted with improved adjustments and have cutting-irons that are tempered just right. They are carefully put together and handsomely finished. All these points count in favor of our Planes when the mechanic is making his selection.

You can make sales if you have the right goods in stock, and Sargent's Planes, with our strong warranty back of them, are the right planes. Booklet and prices will be sent upon application.

Screen Hardware.

The season of screens is so nearly here that it is well for the hardware dealer to make preparation for the sale of the various trimmings needed during the summer months. In our catalogue of Screen Hardware recently issued we have a complete line of Spring Hinges and Door Springs, Screen Door Catches and Latches, Screen Corners for Windows and Doors, Sash Lifts and Door Pulls, Bolts, Knobs, Hooks; in fact, a line comprising everything necessary during "fly-time" including our "No-Slam" Screen Door Check, now recognized as a summer necessity. If you have not received a copy of our Screen Hardware Catalogue we will gladly send you one upon request.

EXPANDED METAL.

There are probably not many instances where an inventor designs his material for one purpose and actually uses it afterwards for another, entirely foreign to the original intention, but such is the case with Expanded Metal, invented by Mr. John F. Golding, a former newspaper man of Chicago, as a material for fencing, gates,

JOHN F. GOLDING, INVENTOR.

window guards and other similar uses, but which was found so eminently adapted for fireproof plastering lath, and in its heavier weights as a binder for concrete floors, that it quickly sprung into world-wide use for those purposes.

It can, perhaps, truthfully be said that Expanded Metal, by making possible the construction of cheap concrete floors has revolutionized the methods of house building. Under this system it is now feasible to obtain a construction completely fireproof at a cost so little more than the old style wooden buildings, that very few will hesitate to decide in favor of the better thing.

Boston, New York, Philadelphia and the other older cities of the country are undergoing a process of reconstruction, which in a few years will work a complete change in their appearance and characteristics. The old-fashioned buildings are being torn down and replaced with modern fireproof structures, in which work Expanded Metal is playing a very important part, and it might be said to have instigated the movement by making such a large reduction in the cost.

The advantages of this system are such as to commend it for general adoption for all classes of structures, and Hardware merchants will find on investigation that a profitable field is open for them by taking up the subject for local effort.

All merchants having knowledge of projected buildings, whether stores, residences, hotels, schoolhouses, or for any occupation, will do well to correspond with the company most conveniently located for estimates on Expanded Metal and cost of erection.

Expanded Metal Steel Lath is kept in stock by many dealers, who find their sales rapidly increasing.

SAW ROOM OF THE HELICOID LOCKNUT WORKS, ACTON, ENGLAND.

This cut appears in February 4th issue of "The Engineer" (London), and shows the Saw Room of the Helicoid Locknut Works, at Acton, England, where 100 of our Star Hack Saw Machines are in operation. No tool that we have ever made has brought us more complimentary reports, or has been more popular the world over. It has capacity up to 4½-inch round or square bars, and requires no attention further than to adjust the work at the start. A single Star Blade costing only a few cents, used in connection with this Machine where it gets fair and uniform treatment, will do more work than would seem credible to any one unacquainted with the goods. Six Blades accompany each Machine.

PRICE OF MACHINE, - - $25,00.

Sold by Machinery and Supply Dealers Everywhere.

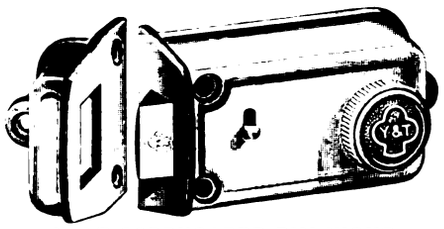
Yale Rim Night Latches

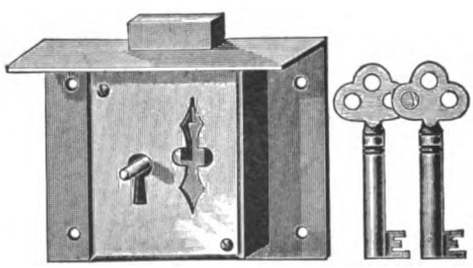
CUTS ONE-HALF SIZE.

were at once accepted, when first introduced in 1867, as the best and most secure locks on the market; they are now admittedly the standard of excellence not only in America but throughout the world; they have many would-be competitors, but in their latest form, and with the Paracentric Key, they have no equal and easily outrank all other night latches in security and popularity.



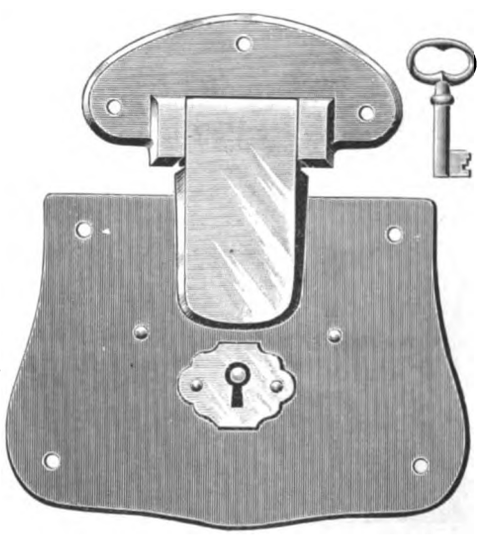
YALE PARACENTRIC RIM NIGHT LATCH No. 42.
(New Model, 1897.)

The case, 2⅜x3½ inches, is of iron, old copper finish, and the cylinder, bolt and knob of polished bronze. It has three Paracentric keys, and is adapted to doors of either hand and of any thickness.



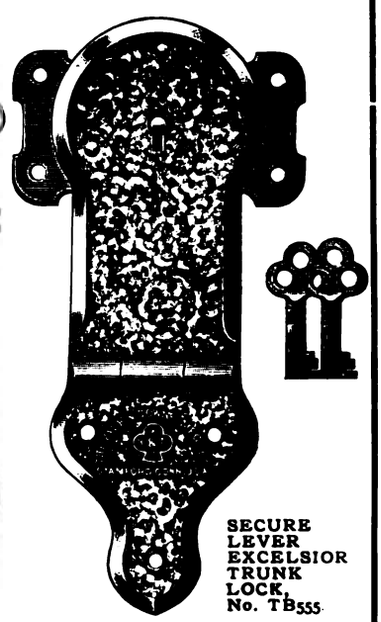
YALE CORRUGATED RIM NIGHT LATCH, No. 22.

This lock is smaller and simpler than the No. 42 and has Corrugated Keys in place of the Paracentric keys of the latter. Its security, while not equal to that of the unrivalled No. 42, is greater than that of all common night latches and ample for many uses. The case, 2⅛x3⅝ inches, is of japanned iron, and the cylinder, bolt and knob of polished bronze. It has two Corrugated keys, and is adapted to doors of either hand and of any thickness.



Yale Cabinet Locks and Trunk Locks

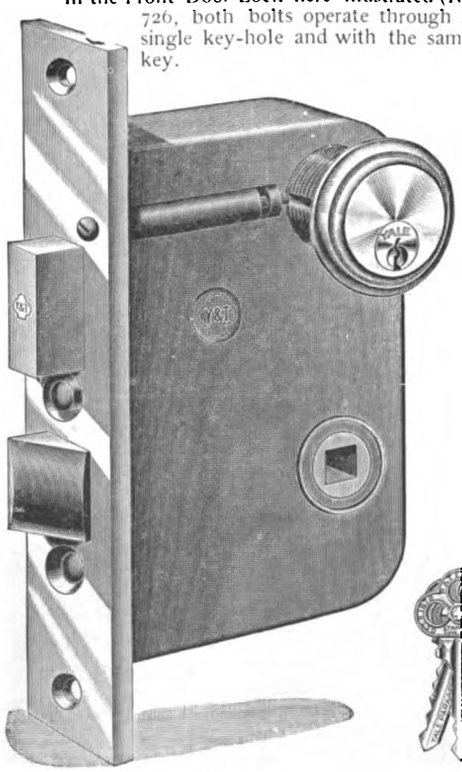
are illustrated in special catalogues of 360 and 120 pages respectively, which will be furnished to those in the trades interested who may not already have received them.



The line embraces all requirements and prices.

SECURE LEVER DRAWER LOCK, RA 2.3.

SPRING LOCK, TS97J.



SECURE LEVER EXCELSIOR TRUNK LOCK, No. TB555.

Yale Mortise Locks

are fully described in the Company's catalogues.

In the Front Door Lock here illustrated (No. 726, both bolts operate through a single key-hole and with the same key.

No. 726.

Yale Padlocks

are fully described, illustrated and priced in a catalogue of 36 pages, which will be sent on request

A folder of 8 pages descriptive of our line of Bicycle Padlocks will be furnished in quantity to our Trade Customers on request. The name and address of this Company will not appear on them.

Marengo.

The Yale "Vulcan" Locks

of all wrought metal, introduced in the Fall of 1897, have been most favorably received by all Architects who have examined them.

Their construction and points of superiority over the cast product are fully described in an artistic brochure. A catalogue of 90 pages, showing each lock and a carefully selected line of plain and ornamental trim, has also been issued, and these may be had on application.

The idea of a wrought metal lock originated with this Company more than ten years ago, when the Standard Lock No. 1620S was placed on the market. This lock, however, while possessing a wrought steel case, in other respects followed the then prevailing practice, whereas the Vulcan Locks present features of originality and improvement in almost every detail.

These locks are not only better than cast, but cheaper. In fact they are "the cheapest locks fit to use."

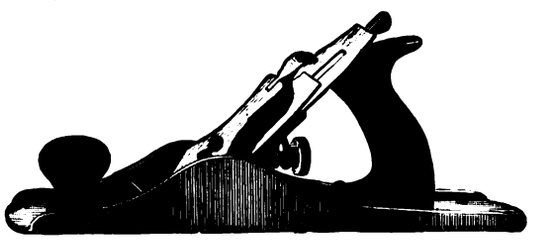
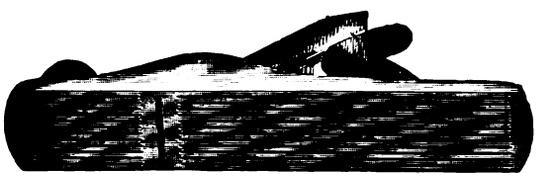
Bailey's Adjustable Planes.

Manufactured only by THE STANLEY RULE AND LEVEL COMPANY.



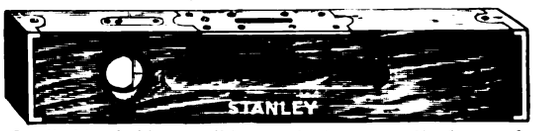
OVER 3,000,000 ALREADY SOLD.

These Planes meet with universal approbation from the best mechanics. For beauty of style and finish they are unequaled; and the superior methods for adjusting them readily in all their parts, render them economical to the owner.



Iron Planes.

No. 1.	Smooth,	5½ inches in Length, 1¼ inch Cutter	$2 25
No. 2.	Smooth,	7 inches in Length, 1⅝ inch Cutter	2 75
No. 3.	Smooth,	8 inches in Length, 1¾ inch Cutter	3 00
No. 4.	Smooth,	9 inches in Length, 2 inch Cutter	3 25
No. 4½	Smooth,	10 inches in Length, 2⅜ inch Cutter	3 75

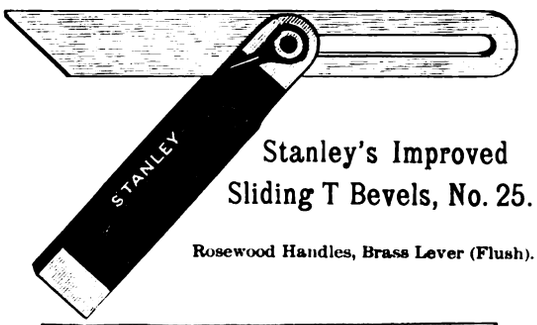


No. 5.	Jack,	14 inches in Length, 2 inch Cutter	3 75
No. 6.	Fore,	18 inches in Length, 2⅜ inch Cutter	4 75
No. 7.	Jointer,	22 inches in Length, 2⅜ inch Cutter	5 50
No. 8.	Jointer,	24 inches in Length, 2⅜ inch Cutter	6 50

☞ Planes Nos. 3, 4, 4½, 5, 6, 7 and 8, with CORRUGATED BOTTOMS, will be furnished without additional expense, if so ordered.

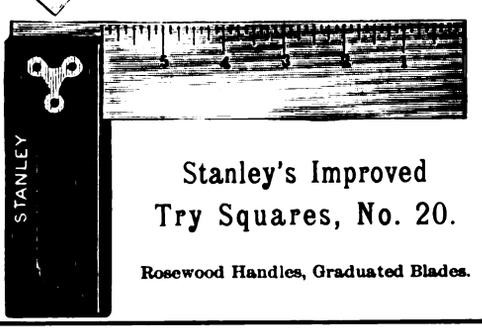
Stanley's Improved Plumbs and Levels.

☞ All our Levels have the "HAND-Y" feature, rightly so called. And only PROVED GLASSES are used.



In climbing ladders, walking on stagings or on the frame of a building, this form of the Level gives a feeling of steadiness.

Proved Level Glasses.



Made of extra thick tubing. Each Level Glass is marked at its highest, or crowning point, by two indelible lines; and each Plumb Glass with a single line. The owner can thus easily set the Glasses accurately in proper position, if required.

Stanley's Improved Sliding T Bevels, No. 25.

Rosewood Handles, Brass Lever (Flush).

Stanley's Improved Try Squares, No. 20.

Rosewood Handles, Graduated Blades.

Will Move Our Business.

Prefer some town between New York and Chicago where more capital can be secured to enlarge our business; can employ seventy-five men with present business. Want town cheap coal and good railroad facilities. We have the best business and trade of any concern that makes Hardware Specialties in this northern country and many which we control. Could move the business as soon as we fill orders we have on hand, which will take about three months. Plant and business will be all clear. Will give all details to any person or persons that are looking to make money and increase the population of their town and a business that has come to stay. For particulars address

T. James Fernley on Happiness.

Editor Hardware: "*Is the life of a Secretary-Treasurer a happy one?*" This question, Mr. Editor, which you have requested me to answer, at sufficient length to occupy at least two columns of your Anniversary edition, is one to which I had given very little thought up to the time of the receipt of your request.

Happiness in a position such as mentioned, depends very largely upon the constitution and disposition of the individual holding the position. Some people strive to see "a silver lining in the cloud;" some people live on the "sunny side of Noon-Day Avenue;" while others seem to prefer to reside on the "shady side of Dark Lane."

In an official position, such as you mention, there are very many emergencies where a heavy heart and sad face would be amply justified; and yet, if the heaviness of heart should prevail, and the sad face appear, the very objects to be accomplished would be thwarted.

"Commercial dyspepsia" is a disease which all should avoid. The condition of the "liver" should always be normal. Truly, *no* life can be happy if the "liver" is not in an enjoyable condition; no life can be better than the "liver."

If, in going about on official duties, we come in contact with those who are suffering from "commercial dyspepsia," or people finding fault with their competitors, with their customers, and even at times with those who are utterly beyond criticism—the MANUFACTURERS—it is in our power to add to the misery of such, and it is also possible to leave such a one after a half-hour's conversation, feeling that the disease from which he has been suffering is not of as virulent a nature as was supposed.

We have many times parted with those with whom we have had differences on matters which strongly reveal the "dark side" of humanity, and treated it in what was known and would seem to be a "light" manner, and yet have been compelled when alone, to actually sympathize and almost coincide with the views of those who had made us the custodian of their secret grievances.

The writer much prefers to take the pleasant side of life—realizing that the human span at the most is but short, and whatever enjoyment can be obtained from life should be embraced.

There are times when the speaking of a wrong word may detract from the happy life of one occupying this position. A safe course would be to commit to memory all that was desirable to say before giving utterance to it; but, unfortunately, this is not always practical; and, further, our power of memorizing is not over-developed, and when we attempt to memorize there is much more probability of making a mistake, than if the thoughts are crystallized in an impromptu manner.

We once heard of a Rector in a certain city, who enjoyed the luxury of a valet, instructing his servant to address a Lord Bishop of England, who was visiting the Rector, as "My lord."

In the evening he said to the valet: "At eight o'clock in the morning, you will rap on the Bishop's door. He will reply, 'Who is there?' I want you to answer, 'The boy, my lord,' and whenever you address him, I want you to address him as 'my lord.'"

The next morning the servant tapped on the Bishop's door. The Bishop's voice was heard inquiring "Who is there?"

The valet said: "The Lord, my boy."

If this servant had been left to address the bishop in an impromptu manner, he certainly would not have made a worse mistake than this.

It is perfectly possible for one to make his existence either happy or miserable.

Some one has said "laugh and grow fat!" We have "laughed" until we weigh 256 pounds, and now we are being "laughed" *at* because we are "fat."

Enjoyment, pleasure, rational and proper dissipation, in the majority of instances, will add to the physical condition as well as the proportions; while sorrow, misery, trouble and anxiety will generally make a person lean and unhealthy.

We therefore recommend to all the obtaining of as much pleasure from mingling with their fellow-men as is possible.

We believe that merchants in the same line of business, coming together in Associations, spending two, three or more days in each other's society, will prolong their lives because of the enjoyment obtained, and also prolong their commercial existence, because their ideas on business methods become more expanded, and the profitable conduct of business more likely.

We think, however, that the tendency to turn a business convention into a "junket" is one which cannot be too

T. JAMES FERNLEY.

closely guarded against. Pleasure on such an occasion should be more of an intellectual nature than otherwise.

It will not pay the average merchant to leave his business three or four days and spend considerable money to go to a distant city, simply to have what is known as a "good time."

The pleasure to be derived from attending meetings of trade Associations must consist very largely in the consciousness that one is better equipped, after returning from such a convention, to give the details of his business proper attention.

We want to congratulate your most excellent journal on having neared its first decade of existence, and to hope for your continued prosperity. T. James Fernley.

OLIVER BROTHERS, HARDWARE BUYERS.

The benefits of association in business, whether for social or business purposes, which are so well exemplified in the great Hardware Associations of the country, which are so thoroughly described in this issue, are shown in another form of associated effort in which, perhaps, the business feature is a predominant element. Any combination of brains, capital, enterprise, and industrious application, which enables one office, at a certain point, to combine within itself an answer to all the commercial and business needs of a number of great jobbing houses, situated at widely separated points, is certainly a great advance step in the simplification and extension of modern commercial forces.

FRANK J. OLIVER.

An arrangement of this character, which enables a wholesale house on the Gulf of Mexico, for instance, to join hands with another on Lake Superior, and still another at the entrance to the Golden Gate, for the purpose of pooling their interests in the way of purchases, and securing the benefits which a combination of their size is certain to compel in the way of prices, is a benefit to the trade everywhere; enabling in the first place each of these houses to obtain the same benefits which would follow were all the purchases to be made for itself alone, and at the same time permit the manufacturer to secure one lump order, instead of a dozen small ones.

These ideas are called forth by the remarkable success which has been secured by the firm of Oliver Bros., purchasing agents, who are pioneers in this line of labor, and are recognized as standing in the forefront in the application of the principles in the above. For seven years and more, this firm has been one of the leading commercial forces of the Hardware trade of New York City, and they are known to the Hardware trade everywhere, as enterprising and progressive.

They are located in the Graham building, No. 127 Duane Street, New York, and long since succeeded in establishing a large and remunerative business. This was started on January 1, 1891, by Thomas E. Oliver, who was afterward joined by his brother, Frank J. Oliver, and on May 1, 1892, the firm of Oliver Bros. took their place among the Hardware organizations or establishments of New York.

Oliver Bros. represent only Hardware jobbing houses, which are secured from the principal jobbing points throughout this country, but they also buy for four foreign houses. The object of their business is to combine orders of the various members of their syndicate for standard lines of goods, thus making it naturally an object for manufacturers to name them inside prices. They have an office force numbering some sixteen, including principals, and are looked upon as among the heaviest buyers of Hardware lines. Their policy is to have goods shipped and charged directly to the houses they represent, as far as possible, but they also make some purchases in their own names.

The gentlemen forming this firm have for years been well and favorably known in connection with the Hardware trade, and each of the members has won his way up from the very bottom round of the ladder, and there is consequently no department of the Hardware trade with which they are not thoroughly and practically acquainted.

The principals are Frank J. Oliver and Thomas E. Oliver. The former was for seventeen years in the employ of the Hawley Bros. Hardware Co., of San Francisco, commencing as office boy, and rising step by step to the important position of buyer and manager. He is still a director in that house, and also in the company of Todd & Hawley, of San Diego, Cal., both of which firms are represented by Oliver Bros.

The other partner, Thomas E. Oliver, started in business as an office boy for R. K. Carter, where he remained for eight years, and for the three years following, managed the New York office of Welsh & Lea, of Philadelphia, the well-known manufacturers and exporters. When the firm last named suspended on January 1, 1891, Mr. Oliver commenced in business upon his own responsibility as the representative of a syndicate composed of five jobbers, which number, during that year, was increased to twelve. It will thus be seen that Mr. Oliver has practically spent his whole life so far in the purchase of Hardware, and has an experience of the utmost value in this direction, and one which it would be difficult to duplicate.

THOMAS E. OLIVER.

Mention should also be made in this connection of James

Digitized by Google

H. Oliver, brother to the principals above named, who has a working interest in the business. He was connected also like his brother, Thomas E. Oliver, with the offices of R. K. Carter and Welsh & Lea, and when Thomas E. Oliver started in business, his brother went with him. He is of great service in connection with one of the buying departments, and in looking after some of the details of the office business.

Messrs. Oliver are also large stockholders in the business of the Allen Hardware Co., Charlotte, N. C., of which D. E. Allen is president, Thomas E. Oliver, vice-president and Frank J. Oliver secretary. These gentlemen have both been members of the Hardware Club of New York from the beginning, and, it is unnecessary to say in connection with the above, are well and favorably known in the business and social life of New York.

The Philadelphia Hardware Association.

Editor Hardware: The Philadelphia Hardware Association is a strictly trade organization, composed of manufacturers, jobbers and retailers, of Philadelphia and vicinity. Our organization is, I believe, the oldest of its kind in the country, the first meeting having been held at No. 1207 Chestnut Street, Feb. 21, 1884.

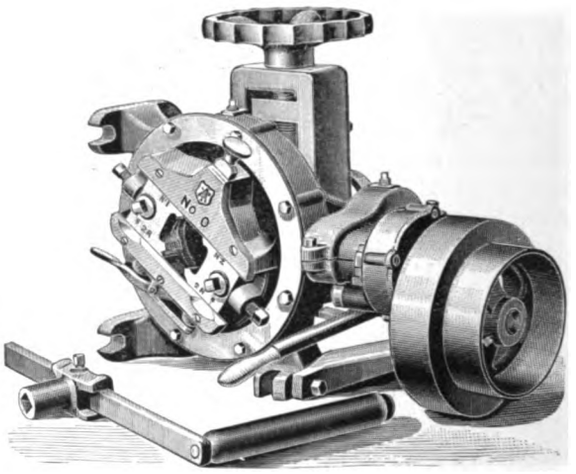
An invitation had been extended to members of the Hardware trade, asking them to meet and form an association whose object would be, for the mutual benefit of its members. The meeting was largely attended by the prominent members of the trade. A temporary organization was effected, and a committee appointed to draft a constitution and by-laws. At this meeting, the objects of the Association were fully explained, and it was clearly shown that many advantages would accrue to members of such an organization. Many of those present engaged in the discussion, and expressed themselves as being pleased with this new idea. We then adjourned to meet on March 20th. This was our first regular meeting. The constitution and by-laws were adopted, permanent officers nominated and elected. We were banded together for social and beneficial objects.

The Association grew rapidly, and in March, 1885, an application was made for a charter, and on May 2d, it was granted. Since then, we have been gradually but steadily growing; until now our membership numbers several hundreds, and we are in a very flourishing condition. At our meetings, many important questions have been discussed and acted upon. It has been our purpose to make our influence a power for good to the general Hardware trade. We have been able to establish good feeling among the various dealers. The old feeling of jealousy, that formerly existed, has been almost entirely blotted out.

Another feature of our Association is to be of material aid to the families of our deceased members, thousands of dollars having been distributed in this way.

The future with all its uncertainty lies before us; but we are well equipped and prepared to take up any of the questions that present themselves. The Philadelphia Hardware Association will always be found, in the front ranks, in pushing forward any good movement, lending its voice to that which it believes will be for the best interests of our city, and the Hardware trade in general.

Our experience has proven to us, that organizations of this kind are not only useful, but stimulate the trade of which they are a part. Yours truly,



T. B. Hendrickson,
Secretary Philadelphia Hardware Association.

Philadelphia, Pa.

The S. W. Owen Co., Norwalk, Ohio, have just closed contract for heating the Old Ladies' Home, at Elyria, Ohio, using their Duplex Water Tube Heater. Their system also furnishes hot water for domestic use.

Armstrong's No. O Pipe Machine with Power Attachment.

The recognized merit of the No. O new hand pipe threading machine, the latest addition of the Armstrong Mfg Co., to their large line of improved pipe machines, and now in general use by the trade, has created a wide demand from mill and factories for the same machine to be run by power. To meet the market the Armstrong Mfg. Co have lately brought out an attachment which can easily be fitted to the machine, and turns it at once into a power machine. This attachment is composed of an extra gear and pinion with two cone pulley which is slipped on the pinion of the second speed and has a stay bolted on the base to support it, making it perfectly strong. The engraving shows the machine with attachment ready for the belt. The No. O machine is made for threading pipe ⅛ inch to 2 inch and

bolts from ½ inch up to 1½ inch. The working parts are all encased so as to keep them free from chips and dust. The gear of the die head does not bear on the head when revolving, and therefore does not wear loose by friction. This is considered the very latest improvement on threading machines, and make it impossible for the operator to produce a "drunken" thread. There are other attractive and meritorious features original in this machine and which have been made to meet the demands of the trade Full particulars can be obtained by addressing the manufacturers either at Bridgeport, Conn., or No. 139 Centre Street, New York City.

St. John Iron and Hardware Association.

In the early days of 1895, the St. John Iron & Hardware Association of St. John, New Brunswick, came into existence. This new organization was formed for the purpose of social intercourse, discussion of all matters of interest to the trade, the fixing of prices, the regulation of freights, etc. All houses engaged in the iron or Hardware trade of St. John were eligible to membership in the organization. The following officers were elected for the first year:

President: W. H. Thorne.
Vice-President: S. Hayward.
Secretary and Treasurer: J. J. Barry.

It was ordered that the annual meeting should be held on the second Monday of January of each year, and the regular meetings on the first Monday of each month.

The "Hardware Hints" published by the Logan-Gregg Hardware Co., Pittsburg, Pa., for April, is at hand, and we must congratulate this excellent house upon the issuing of a very interesting statement concerning their business, and some other things in connection therewith. Considerable skill has been shown in the preparation of the publication.

Age renders German silver brittle when strong currents are used. This is true also of gold or silver wire.

E. BISSELL & CO, HARDWARE AUCTIONEERS.

Among the forces that have assisted in making the Hardware trade of New York the great and important factor that it has to-day become, the firm of E. Bissell & Co, must be regarded, especially, as they are known the country over as the only exclusive wholesale auctioneers of Hardware and cutlery, and have a large and important connection with the Hardware trade. They are located at Nos. 12 Murray Street and 15 Park Place, New York City, where they occupy six floors, extending from the one street through to the other, giving them two front entrances, and a large area of floor space. At the age of twenty-four Eugene Bissell commenced this special line of business, on January 1, 1863. While still in active business at the head of this line of labor, he may be regarded as one of the pioneers in this special line, for he has practically been connected with Hardware lines from that early day to this. Since 1874, Mr Bissell has been identified with this trade to the exclusion of everything else, and during this long and important period, has practically done not only the wholesale Hardware auctioneering of this city, but for most of the leading manufacturers and importers of cutlery, house furnishing goods, bicycles, China, Japanese ware and fancy goods, not only for New York, but throughout the country at large.

During the time above referred to, he has conducted some very large and important sales, among which the following may be mentioned: Those of the American Screw Co, the Cutlery Association, including Meriden Cutlery Co., Lamson & Goodnow Mfg. Co., Landers, Frary & Clark, J Russell Cutlery Co., American Cutlery Co., Beaver Falls Cutlery Co., Northampton Cutlery Co., Goodell Co., New York Knife Co., Bridgeport Cutlery Co.; and also those of Wm Bryce & Co, Gilbert, Sweet & Lyon, Bedell & Co., Rogers Mfg. Co., Schweitzer Mfg. Co., Geo. W. Albnrtiss, Lalance & Grosjean Mfg. Co., St. Louis Stamping Co; also the china sales of Charles Vagt & Co., Burgess & Godda-d, Benedict & Co., George Borgfeldt & Co, Hinrichs & Co., Oscar Strasburger & Co; the fancy and Japanese goods sales of Althof Bergman & Co., A. A. Van Tine & Co., R. Isaacs & Bro., DeMaisener & Co.; and the bicycle sales of Ormonde Cycle Co., Indianapolis Cycle Co., Speirs Mfg. Co., Warman & Schub Cycle Co., New Haven Cycle Co., Hendee Mfg. Co., etc., etc.

The firm of E. Bissell & Co. now consists of Mr. Bissell and Frank Van Name. The gentleman last-named is Mr. Bissell's active lieutenant, and gives an earnest and efficient service to the important interests which the firm have in hand. The above facts show that Mr. Bissell has practically seen the growth of the wholesale Hardware auctioneering business of the country, and has personally been an important part of the same. As above stated, he began his connection with this line in his early days, and it has been his pride to make of it something more than a mere business connection, and has applied to it those foundation principles of judgment, industry, investigation and the application of new methods, that have been applied by other men with equal success in allied lines of business or labor. There is no part of this business, or no ramification thereof, which he does not thoroughly understand, or through which he has not passed by practical experience. He may, therefore, be regarded as an expert upon all questions relating to the disposal of large or small stocks of Hardware, etc., etc., in this manner. His house to-day stands among the best in the city, and has a reputation for square dealing, honest business methods and the obtaining of the best possible results for those whose interests are committed to its hands. While looking after the interests of those whose goods are sent to them for disposal, E. Bissell & Co. have an equal regard for the interests of those by whom purchases are made; and buyers, whether in large or small quantities, can always feel satisfied that they are protected in all possible ways by the house. And one of the best assets of the firm is the fact that it possesses the confidence and good will of both seller and buyer.

Eugene Bissell was born in Suffield, Conn., on November 1, 1839, of English descent, and has a good right to his membership in the Sons of the Revolution and the Society of the Colonial Wars, as his ancestors were numbered among the earliest and best settlers of New England, and did their share, not only in the war for independence, but

EUGENE BISSELL.

also in the earlier colonial wars against the French and Indians. Mr. Bissell has the proud distinction of knowing that a grandfather upon the maternal, and another upon the paternal side, took personal part in that memorable campaign which centered about the bloody field of Lexington. His childhood and youth were passed under the homelike and beneficent influences of New England life, and his education secured at the Connecticut Literary Institution at Suffield. In 1859, Mr. Bissell went South and engaged in business at Holly Springs, Miss. He thoroughly identified himself with the life of the South, but when the civil war threatened, followed the bent of his patriotic sympathies, and came to the North. On June 8, 1861, he enlisted for the war as a member of the Ninth New York Regiment, which was sent immediately to the front. He served until July, 1862, having seen considerable active service, when he was honorably discharged on account of disability, then returned to New York, and soon afterward took an active part in the business connections referred to above, where he has since remained. Mr. Bissell is a member of the Sons of the Revolution, the Society of Colonial Wars, Veterans of the Ninth Regiment, Veter-

Digitized by Google

ans of the Seventh Regiment and the War Veterans of the Seventh Regiment, and Lafayette Post, Grand Army Republic.

Mr. Bissell was very active in the creation of the Hardware Club of New York, and has been continuously among the hardest workers upon its official staff. He was elected one of the original board of governors, which position he has since retained by successive re-elections, his present term expiring in 1900. He was a member of the first dinner committee, where he did active service, and has been a member of each succeeding committee from that day until this. He was one of the original members of the house committee, of which Peter McCartee was the first chairman, and on the elevation of Peter McCartee to the presidency of the club, was appointed chairman, where he has done most efficient and intelligent service, to which is due a large portion of the present efficiency of the working forces of the club.

In all that relates to social life, reputation for fair dealing, the esteem and good will of the trade. and courtesy towards those with whom he comes in business contact, Mr. Bissell is held in the highest repute.

The Montreal Association.

Owing chiefly to the efforts of Thomas J. Drummond, who was then a member of the council of the board of trade, a meeting of the Hardware and Metal Merchants of Montreal, was called in February. 1894, to consider the desirability of forming an Association of these branches of the trade. The meeting was held, and the Association definitely organized under the name of the Metal & Hardware Association of the Montreal Board of Trade. The original members of the Association were as follows: Abbott & Co.; Bacon Bros.; K. W. Blackwell; Geo. S Brush; Canada Iron Furnace Co., Ltd.; Jas. Cooper; Chas. J. Chisholm; Copland & Co.; Wm. Clendinneng & Son Co., Ltd.; B. J. Coghlin; Crathern & Caverhill; Caverhill, Learmont & Co.; Chas. Cassils; Dom. Wire Mfg. Co., Ltd.; Drummond, McCall & Co.; Thos. Davidson & Co.; Drummond, McCall Pipe Foundry Co., Ltd.; Jas. Fyfe; Gurney, Massey Co., Ltd.; Robt. Gardner & Son; Garth & Co.; J. H. Hanson; E. N. Heney & Co.; A. Holden & Co.; H. R. Ives & Co.; W. M. Knowles & Co.; Warden King & Son; Gerald Lomer; Londonderry Iron Co., Ltd.; Lewis Bros. & Co ; A. C. Leslie & Co.; Letang, Letang & Co.; Machinery Supply Co.; McClary Mfg. Co.; John McDougall; A. Macpherson & Son; Middleton & Meredith; Montreal Rolling Mills Co.; Thos. L. Paton; Jas. W. Pyke & Co.; Geo. R. Prowse; Moses Parker; Pillow & Hersey Mfg. Co.,Ltd.; John B. Rose & Co.; Wm. Rodden & Co.; Thos. Robertson & Co.; B. & S. H. Thompson & Co.

The Association has done excellent work, as shown by the annual reports for each year that has elapsed since the beginning of the organization. The merchants and manufacturers of Montreal connected with the Hardware and metal lines have been able to act together, in regard to legislation affecting their various interests in matters pertaining to the dealings with various railroads, in regard to freight rates, and have also been able to do something toward shortening terms of credit, the undue length of which has been in the past a very great drawback in trading in the Dominion. The president, GeorgeE. Drummond, writes us: "If the work done by our Association has not been very great during the past year or two, it is simply because the occasion has not demanded our interference, but the members feel that it is a good thing to hold the Association in readiness to act should any emergency, legislative or otherwise, arise affecting the general interests of our trade." The present president of the Association is Geo. E. Drummond, and the secretary, J. Stanley Cook.

HARDWARE'S "Prices Current" are reliable

1898 League Tire Catalogue.

The New York Belting & Packing Co. have issued a new 1898 League Tire catalogue. This has purposely been made small and compact, so as to slip into an ordinary envelope, and contains portraits of the two well-known amateurs, R. M. Alexander, who won the first-time prize in last year's Irvington Millburn road race, and John M. Nobre, the champion century rider, with a record of 253 centuries made during 1897. Both of these gentlemen won on League Tires.

In these times of cheap prices, the company have thought it well to emphasize the fact that League Tire quality has been kept up to the highest standard of rubber fabric and workmanship, but that riders can secure them in most cases without extra cost; and even where a charge is made, it is not really felt by anybody.

This artistic little work is illustrated with cuts of League Special and League Single-Tube Tires, showing the six layers, four of rubber, and two of fabric, which go to make up each tire, and indicating clearly the amount of thought, care and labor necessary to produce first-class tires. Following these illustrations are brief descriptions of the League tandem and racing tires, after which come the sizes, weights, price list , guarantee, etc.; and last of all, there is a brief description and directions for using the Leaguekit Repair Tool. This is simple, quick and certain in its operation, and makes both a cement repair and plug repair, as the size of the puncture requires, doing the work of two repair kits at the price of one. On the front and back covers appear the well-known round League tire emblem.

The New York Belting & Packing Co will send this catalogue free to anyone, on receipt of address.

New Feature of Bissell Carpet Sweepers.

The Bissell Carpet Sweeper Co. have secured exclusive control of a patent process for covering carpet sweeper handles with velour, or velvet, and it is apparent that the practicability of this feature will appeal at once to the trade and the consumer. These handles will be covered with handsome figured velour, or velvet, in variegated designs and patterns, and will be mounted with nickel caps and bands. These richly upholstered handles will not only be delicate to the touch, but will prevent the marring of furniture in sweeping under beds, tables and lounges, or when the handle tips over by accident, as often occurs.

These handles will add materially to a carpet sweeper display, and cannot fail to promote the sale of Bissell sweepers.

East Tennessee Hardware Association.

On October 22, 1895, the East Tennessee Hardware Dealers' Association was formed at Greenville, Tenn., at which time eight firms of Hardware dealers were represented, and letters were read from others, promising their support. The following officers were elected for the first year:

President: Geo. E. Speck, Morristown.

Vice-President: R. M. Rogan, Rogersville.

The subsequent meetings of the Association have been well attended, and the success which has followed this effort is shown by the interesting letter from the president of the same, found upon another page of this issue.

She (at the reception): Well, Mr. Rott, how is poetry now?

Mr. Rott (rising young poet): Very dull, indeed. Patent medicine verses bring only 5s. a hundred words, no activity at all in porous plaster ads., and in the slump of prices yesterday children's food rhymes went down thirty points in fifteen minutes.—*Tit Bits.*

THE HUMASON & BECKLEY MFG. CO.

The business of the Humason & Beckley Mfg. Co., New Britain, Conn., and No. 80 Chambers Street, Borough of Manhattan, New York, was established by William L. Humason, senior, in the year 1853 at New Britain, Conn. From 1853 to 1863 Mr. Humason had several different partners, though a portion of the time he conducted the business alone. The firm was known through this period as W. L. Humason, Whitney & Humason, Doen & Humason, Humason, Beckley & Lockwood, and Humason, Beckley & Co., and in 1863 was incorporated with an increased capital, as the Humason & Beckley Mfg. Co.

About one-half of the product consists of builders' and miscellaneous Hardware, such as hammers, wrought iron and bright wire goods, bolts, corkscrews, etc., etc., and the balance, of pocket cutlery, the manufacture of which

VIRGIL P. HUMASON.

was commenced soon after the formation of the company in 1863.

The company now produces a large variety of these goods, consisting principally of the finer grades of pocket knives, the reputation of which has long been established, and the H. & B. brand is now, therefore, too well and favorably known to need further commendation here.

When the company was formed, in 1863, W. L. Humason was made president, treasurer and manager, and Franklin W. Beckley, secretary.

Mr. Humason died on April 15, 1889, leaving a widow and two sons, Virgil P. Humason and William L. Humason. He was prominent in business, political, social and educational circles. He held many positions of public trust, and was twice elected to the State Legislature. He was a man of literary attainments, and a poet of no mean order, as all who knew him will attest.

Virgil P. Humason was made treasurer of the company in 1866, and on January 1, 1871, took charge of the New York office. He graduated from the New Britain High School in 1863, and from the Eagleswood Military Academy in 1866 where he was the valedictorian of his class. In 1875, while still in business, he commenced the study of law, devoting his leisure time to it, and in 1878 graduated with honors at the Law School of the University of the City of New York, and was admitted to the bar as attorney and counsellor-at-law on May 15, 1878.

William L. Humason, Jr., graduated from Harvard College in 1877, and from that time took an active part in the business, being made assistant treasurer, and upon the death of his father, president of the company.

Mr. Beckley, senior, died many years ago, leaving one son, the present secretary, who is now traveling for the company, and who is well and favorably known to the trade.

The present officers of the company are: W. L. Humason, president; F. S. Beckley, secretary, and V. P. Humason, treasurer and New York agent.

Evolution in Trade Methods.

Everything in life is changing. Revolution and evolution seem to be going on everywhere. Scenes, methods, habits, tastes, and even principles, are radically changing. It is a new life, with new ways and new aspirations—not the least startling change is to be seen in business life. What would the rich old merchants of half a century ago say to the methods, expenses and fine surroundings of the business houses of the present day? They would rub their eyes in bewilderment, and tell many a story of their own day of simplicity and economy, and yet of great and honorable success. All business men, and especially the younger firms, should recognize the new state of affairs, and make a constant study of the changes and development that are taking place. Judgment and nerve are required in a higher degree than ever before. Business must have clear brains and stout hearts. It must have constant watchfulness and energy. It must have regard not only for private interests, but the public welfare. The success and expansion of firms cannot now take place without the prosperity and growth of cities. The road to fortune in business is no longer the beaten track which can be followed from generation of a family. Each season and each year is producing new elements and relations in the situation, in connection with human progress generally, and the wise and successful merchants will be those who join in the onward march with faith in themselves and confidence in the future.—*Exchange.*

The displacing of wood by steel in the construction of grain elevators is likely to grow in favor, as the merits of the steel structure are more widely known. The Buffalo elevator to be run by electric power will have enormous capacity, and one being projected by the Canadian Pacific will, it is said, have equal storage room. The same road proposes to build a series of steel elevators along its lines, where, as in Manitoba, the raising of grain is a leading industry. These are but the beginnings of a systemized movement that cannot fail to be of great importance to American steel manufacturers.

Christian Trautman, proprietor of the business conducted under the name of the C. Trautman Hardware & Supplies, No. 1803 Carson Street, Pittsburg, Pa., died at his residence in that city on March 2nd, thus removing from the scene of active business a prominent member of the Hardware trade of that city.

A horseshoe magnet will lift a load three or four times as great as a bar magnet of the same weight will lift.

SOME LATER ENDORSEMENTS.

Elsewhere, we publish a number of very interesting communications from presidents of the various Hardware organizations, and other leading members of the trade, telling briefly what each club or association has done for the territory it represents, and giving the opinions of these gentlemen, as to whether they believe in Hardware Associations, and why. Since these communications have been sent to press, we have been favored with several others of like character which are here reproduced:

FROM GENERAL TILLINGHAST.

Editor Hardware: I have received your very courteous communication bearing date of 24th inst., asking me to give my ideas, as a Hardwareman, on the subject of *whether I approve of Hardware Associations, and why.*

I very frankly answer that I do, and my reasons are these:

The people of the world, in every branch of commercial and mercantile life, are tending toward centralization. Part of that centralization is a disadvantage to the people, a large portion for their good; likewise with the object of benefiting mankind and the dissemination of knowledge, scientific men in all walks of life are forming associations. I feel that it is wise, timely and a matter of business precaution, for men interested in a particular mercantile line to come together, from time to time, discuss their differences, heal their wounds; and if they gather with a feeling of reciprocity, I believe it will inculcate into the whole a stronger and healthier feeling. But to accomplish this they must bring themselves to a point where they are ready to yield to one and receive from another. Too much attention should not be given to controlling values. The main point to be aimed at should be the stopping of abuses, preventing unbusiness-like competition and framing such legislation among themselves as will persuade manufacturers that they cannot carelessly neglect the arteries that carry, so to speak, their commercial life-blood through the territory in which they exist.

The social side of such gatherings should not be overlooked. Ofttimes the most chivalric acts of life come from a friendship formed by contact with one who before seemed an enemy, but who across the hospitable board has proven himself a friend. Associations based upon honor can confidently look forward to success.

Yours truly,

Albany, N. Y. C. Whitney Tillinghast 2nd.

SEVERAL GOOD REASONS.

Editor Hardware: In responding to your question, "What has your Hardware Association done for the trade which it represents?" Permit me to state:

First.—It has been instrumental in establishing a cordial relationship between the houses constituting its membership, displacing a spirit of distrust, suspicion and hostility with a feeling of confidence and good fellowship.

Second.—It has developed the principle of honorable competition, and whilst recognizing that rivalry for trade is keen, it does not follow that it should be bitter, but that our several interests can be better served through the means of a friendly feeling, one for another, and the pursuit of lofty business methods.

Third.—In enabling us to adjust many matters incident to the trade which could only be accomplished by united action, and where the efforts of individual houses would not avail.

We could enumerate other benefits derived from our Association did space permit, but in accomplishing the above results our coming together has not been in vain.

Congratulating you upon your enterprise, believe me,

Very truly yours,

W. C. Reitz,

President Pittsburg Hardware Jobbers' Association.

Pittsburg, Pa.

SOME GOOD ENDORSEMENTS.

W. Chamberlain, Emery-Waterhouse Co., Portland, Me.: Replying to yours of the 30th, and answering your question: "Do you believe in Hardware Associations, and why?" I answer, I am one of the firmest believers, first, because we have been greatly benefited by them in our business, and have proved beyond the shadow of a doubt their efficiency; because they take much of the sting out of business competition, and promote a feeling of brotherhood in our calling; because, by united efforts, results can be made possible that no single member could bring about. They encourage kindly feelings between manufacturers, jobbers and retailers, assisting each to secure the proper and just reward for their labors; fostering kindly feelings and a respect for the rights of each other; and lastly because they are one of the results of our advanced civilization and encourage the "doing unto others as you would that they should do unto you."

J. C. McCarty, J. C. McCarty & Co., New York: Permit me to subscribe myself in hearty sympathy with associated movements such as embodied in Hardware Associations referred to in your editorial of 10th ult., as when honorably founded and restrictively defined, they exert a healthful influence on all concerned. The social side, usually considered secondary and incidental, is in my opinion primary, and the far-reaching element, that enters into and leavens the whole batch. It is contended in some quarters, and with some show of reason, that Hardwaremen as a class are lacking in sociability. According to same authority we appear to occupy the paradoxical position of knowing each other, and yet are not acquainted. These charges, be they real or simulated, find barren soil in which to thrive where associations exist that have the proper ring to them. Our New York State Hardware Jobbers' Association can be regarded a gem in the crown of trade associations—it rests securely upon the honor of its membership—every link in the chain that binds that body is forged from social material. Mercantile associations worthy the name radiate lasting benefits, the scope of which is only confined by the limits of the country. They should be fostered, upheld and permitted to grow.

D. C. Delamater, Freeman, Delamater & Co., Detroit, Mich.: I am a strong believer in Hardware Associations, because I am in favorof any method which will promote the feeling of good feilowship and personal friendship among those who are competitors in any branch of trade. These Associations are valuable, also, in that they give an opportunity for their members to get together and compare notes, and while they may not of necessity enter into combinations or agreements in regard to prices, they can, by mutual concessions, do away with many methods which are not business-like, and have a tendency to destroy legitimate profits. Without these Associations, there is of course, no organization, and the different individuals are all acting independent of each other. Organization makes them a compact body, with a strength and influence which cannot be accorded to any individual. Busi-

Digitized by Google

ness men who are competitors are fast learning by these Associations that their brothers in the trade who they formerly looked upon with suspicion and distrust, are fully their equal in all respects, and in place of the sentiments of old, there are many and lasting friendships formed. The fraternal feeling has largely increased through these Associations, and the result has been well worth all the trouble or expense in maintaining them.

Thomas F. Smith, Smith Bros. Hardware Co., Columbus, Ohio: In reply to your request, will say that I do believe in these Hardware Associations. In coming together we become acquainted, and if we have any grievances we can adjust them. After these associations we are not quite so willing to believe all the reports we hear in regard to selling goods without profit.

T. W. Gathright, May & Thomas Hardware Co., Birmingham, Ala.: Do I believe in Hardware Associations? Yes. Why? Because by attending the annual meetings we get valuable information from members that can be obtained only by experience. Because in union there is strength and we get recognition from manufacturers as a body that we could not get as individuals. Because through officers of the association we keep in touch with others in the same line, thereby learning the most improved methods of conducting the Hardware business.

Thomas Coldwell, Coldwell Lawn Mower Co., Newburgh, N. Y.: I think that the association of Hardwaremen (or any other trade) is a good thing, when used for the purpose of improving our knowledge of the business. We want to understand that education in *tact*, *push* and *principle* are quite as essential to success in business as a general college education.

BENEFITS GAINED IN PHILADELPHIA.

Editor Hardware: In answer to your question, "What has your Hardware Association done for the trade it represents?" it gives me much pleasure to state that I believe its benefits are manifold, and, while it is not always possible to estimate the results in dollars and cents, still it is often possible to see direct pecuniary benefits resulting from our Association, while the indirect benefits are, probably, much greater in number and amount.

In the first place, when the Hardware Merchants' & Manufacturers' Association of Philadelphia was started, some thirteen years ago, jobbers had a very slight acquaintance with each other; in fact, instances were known where jobbers doing business in our city for twenty and thirty years were unknown to each other. As might have been expected, this condition of affairs resulted in more or less personal feeling, while the natural tendency was to believe all that was bad of your competitor.

For the last few years our jobbers and manufacturers have been brought together in friendly converse at least once a month, and annually for a social dinner, and while human nature is still unchanged, as has been the case since the days of Adam, it is difficult to believe the worst of the man who sits next to you at dinner or whom you are in the habit of meeting on friendly terms. This one fact removes much unpleasant discord and strife from business, and means a considerable saving in the course of the year in money.

Now we feel free to confer with each other as to prices we are making, and, while we do not usually attempt to regulate prices by combinations or agreements, still much good is accomplished by this mutual confidence. Then, again, business is not the whole end of life, and we feel it is something to have the good will and respect of your fellow merchant; and the friendships formed in our Association have frequently been very helpful and pleasant, and we are already old enough to see the fathers handing down to their sons membership in the Association and the benefits which result from their fathers' friendships.

As a Philadelphia trade organization, we always feel we have our place among the merchants of Philadelphia and their trade bodies, and while the voice of the individual is scarcely heard, we have frequently, through our Association, been able to enter our corporate protest against mismanagement in civic affairs. and have been able to aid and encourage other undertakings which aim to benefit and advance the city of which we are all proud.

In trade, matters will often arise which cannot be treated satisfactorily by one jobber or a single manufacturer, but where the voices of our united Associations carry weight and authority, and frequently we have been able to effect reforms and to bring about desirable changes in this way.

To recapitulate, we feel our Association has done much in the way of bringing about an era of good feeling and good fellowship, while in trade, civic and economic questions, we have often been able to wield an influence, as an Association, which we could not have possessed as individuals, and are, therefore, believers in our Philadelphia Association, and wish it long life and prosperity.

Respectfully yours,

JAMES H. RITTER,

President Hardware Merchants' & Manufacturers' Association of Philadelphia.

Philadelphia, Pa.

WORK OF THE PACIFIC COAST ASSOCIATION.

Editor Hardware: In reply to your request for information concerning the Pacific Coast Hardware & Metal Association, I avail myself of the opportunity given by your Special Edition of April 10th, to lay before your readers a brief summary of some of the advantages already secured by our organization, and with the hope that it may prove of sufficient interest to stimulate the formation of similiar Associations in territories where they do not exist.

You ask: "What has our Association done in a business and social way for the benefit of the trade it represents?" and I answer that beyond a shadow of doubt, or fear of contradiction, it has demonstrated the fact that in matters pertaining to the general good of the trade, that is, matters in which all are equally interested, it has been a factor of direct benefit and positive advantage; and that as far as the social element is concerned, it has been the means o eliminating much of the acrimonious feeling which possibly is natural, or at least quite common, with competitors who sell goods in the same territory. Our Pacific Coast as a whole, is of great area, but comparatively sparsely populated. It is composed of different sections varied in extent, some of quite limited values for the distribution of merchandise, jealously regarded as exclusive domain, and vigilantly defended from encroachment by the houses within its boundaries.

As transportation facilities have increased, new and distant competitors have been brought into the field, and this additional element of rivalry, added to the general depression of business and depreciation of values during the past few years, brought about an abnormal strife for trade, accompanied by excessive and sometimes unnecessary competition, leaving as a result a feeling of jealousy and distrust of each other that seemed to be quite general. To overcome this injurious condition, by uniting on some common ground beneficial alike to all, in which all were interested and none injured; to develop among our brother jobbers a spirit of amity and concord that would render the interchange of views more susceptible of consideration for the adoption of better methods in business, have been the objects and aims of our Association. How well it has succeeded in these purposes, is evidenced by the fact of its membership, comprising nearly every wholesale house between the extreme southern and northern borders of the Coast States, and the practical good already accomplished.

One object of universal interest was found in the case

Digitized by Google

and cartage question, that is of charging a moderate price for such expenditure, a reasonable and just charge sufficient at least to cover the cost of outlay, and which of late years had grown into disuse through needless competition. This may seem a trivial matter and in its detail doubtless is so, but in the aggregate was a serious burden to those who were compelled by the law of competition to bear the entire loss. An agreement to charge for this service was adopted and is now strictly observed, and has not resulted in any serious complaint, as the charge is an equitable one.

Another subject of general interest was that of terms and credits. In the rivalry for business, undue time and immoderate credits were rapidly becoming the general practice and being extended to those of doubtful responsibility, a custom perilous in many ways to the seller, of frequent disadvantages to the prompt customer, and of questionable advantage to the slow one. An agreement to change this uncertain method and to fix terms that would be reasonable and uniform, was adopted, is now in force and has been of great benefit to all.

These improvements could not have been accomplished without an organization; individual effort was powerless to effect the changes, and therefore the Association has been of benefit to the trade it represents, and that without detriment to any interest.

There are also other matters of equal value to our members relating to the transportation question, and which are now receiving consideration.

Our Association does not seek to control prices to a dead level of non-competition, for this is impracticable as well as undesirable; in fact it is very chary as to the subject of prices at all, but matters of this character that require attention are accomplished through the efforts of supplementary Associations, or Chapters, located in the different important centers, and all kept informed by correspondence through our secretary; but we aim rather through the discussion of sound business principles, and the inculcating of a spirit of consideration and mutual forbearance towards each other, to invite co-operation on measures of general welfare, and through this means and the friendly feeling engendered thereby, to correct the evils of unremunerative competition.

The conclusion is reasonable that if similar Associations could be organized and kept in working order in the various distributing centers of the country, many of the embarrassments and difficulties which now afflict the trade could be corrected or greatly ameliorated, and working through the National Association would become a source of great strength and value to each other.

Our Association employs a paid assistant-secretary, working under the direction of the secretary and executive committee, and it is believed that this method accounts largely for our continued success, as very few of our members could afford the time to attend to the many details requiring prompt and constant attention.

Very respectfully yours,

BRACE HAYDEN,

President Pacific Coast Hardware & Metal Association.

San Francisco, Cal.

Several towns in Connecticut have claimed each that the first person in this country to receive a patent had lived in that town. It is doubtful if any one can claim an older date than the following: Otis A. Smith, manufacturer of firearms at Rockfall, is in direct line of descent from Joseph Jincks, of Lynn, Mass., the first recorded inventor in America. In 1655 he was granted a patent for an improved scythe. He also made the first castings in this country, and in 1652 made the dies for the famous "Pine Tree" shillings. In 1654 Mr. Jincks made for the City of Boston the first engine in America, and his name is also associated with other inventions of that time.

Cleveland Retail Hardware Association.

Among the organizations of the Hardware line that have recently come into existence, is the Retail Hardware & Stove Merchants' Association, Cleveland, Ohio, of which H. P. Davidson is president, and W. E. Godfrey, editor of the *Ohio Merchant*, is secretary. The basis upon which this Association has been organized is the following declaration of principles enunciated by the charter members:

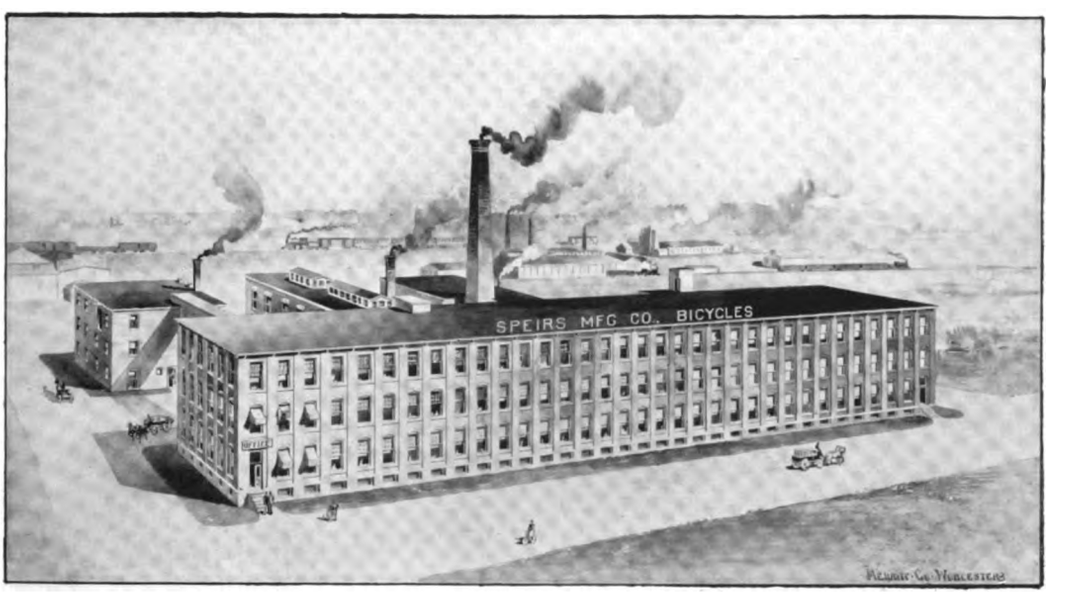
We, the undersigned, hereby join the Cleveland Retail Hardware Association for the purpose of increasing acquaintanceship with each other and to foster the highest commercial integrity among the Hardware, paint, stove and furnace dealers of Cleveland; to discourage excessive, unfair and unmercantile competition; to obliterate feelings of distrust and jealousy; to remove by concert of action all evils and customs that are against good policy and sound business principles; to influence legislation in favor of better collection laws; to encourage the increase and prosperity of the manufacturing and commercial interests of Cleveland; to efface installment house competition whereby standard brands of goods are sold on time, frequently at prices below a legitimate profit; to furnish each other with the names of undesirable credit customers, and to take such other action from time to time that will subserve the best interests of each other and the prosperity of all.

Regular meetings will be held on the first Tuesday of each month, and the number of members will soon reach one hundred. A number of the larger houses like the Mc. Intosh-Huntington Co., and H. W. Luetkemeyer & Sons, have become members of this Association.

The "New Easy" Lawn Swing.

The Strobel Mfg. Co., Marion, Ohio, are placing upon the market with great success, the "New Easy" Lawn Swing, an illustration of which may be found on page 102 of this issue. They speak in the strongest terms of the ease with which this lawn swing is operated, and call attention to the fact that it is made of the very best material, attractively finished, and automatic in operation. They further add: "It furnishes a delightful and healthful exercise for grown people as well as the little ones. The backs of the chairs are adjustable so they can be set up straight or inclined at any angle you would want it. The platform that the feet rests on is also adjustable; it can be raised or lowered to suit children or grown people. The 'New Easy' is a good, strong and substantial swing; can be taken apart and moved on a moment's notice; is arranged to fold up like a jack-knife and put away for the winter, occupying but very little space. Its adjustable features make it a combined swing and hammock, espepecially adapted for the park, lawn or veranda. Nicely painted and attractively finished."

A National Retail Hardware Association.



From various communications found in this issue, and from other signs of the times, no one need be surprised to see a National Association of Retail Hardwaremen come into existence at an early date. The formation of State Associations is an indication that the National Association will soon have to follow. It will be remembered that some time since, we published opinions from officials of the leading associations of the United States, in favor of consolidation in one central body, and it looks now as though the retail dealers would take the first step for the accomplishment of this greatly desired purpose.

The monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on Wednesday, April 13th, at 5.45 o'clock. Dinner will be served at 6 P. M., after which a number of interesting addresses will be delivered.

THE SPEIRS MFG. CO.'S SUCCESS.

The Speirs Mfg. Co., Worcester, Mass., for whom E. Bissell & Co., Nos. 12 Murray Street and 15 Park Place, New York City, are wholesale and retail agents, have won a reputation as manufacturers of bicycles and bicycle parts, which has placed them in the front rank in that line of production. They began business under charter, on January 25, 1892, and by enterprise and good work, have increased in size and influence and the amount and production, with every year that has passed. Their bicycles are well known everywhere, and the production for 1898, as illustrated in their handsome catalogue just at hand, covers the following wheels: Model A, Gentlemen's Roadster; Model A, Ladies' Roadster; Model B, Gentlemens' Roadster; and Model B, Ladies' Roadster. These wheels are fully illustrated and described in the attractive little catalogue, which will be sent on application, to any one interested. In addition to the making of bicycles, they have a first-class reputation as manufacturers of hubs, pedals, forgings and wrenches, and also are open to orders for the manufacture of anything in the Hardware line concerning which they will be pleased to send information to any who are interested.

As said above, the Speirs Co. began the manufacture of bicycles some seven years ago, and their output during the first year was 1000 wheels. Since then, the plant has been materially enlarged, and the output for a year has been 10-000 wheels and 5000 tandems, besides thousands of separate parts of wheels for other makers. Practically, the entire wheel is made in the Speirs factory, the only important exception being the wooden rims, rubber tires and saddles. The wooden rims are bought in Maine, and the purchasers of the Speirs wheels are given their choice of a variety of different saddles, and of several of the most approved makes of tires, which are especially guaranteed by the manufacturers. Every other part of the Speirs wheel is made in Worcester, and they are the best that money, experience and the highest grade of skilled labor can produce. We show, in this connection, the extensive factories of the company at Worcester, and the illustration speaks for itself as evidence of the size and importance to which this energetic corporation has grown.

Within the last few years, many have come to recognize the real merits of the Speirs wheel, and as a result it has grown in favor with those whose technical knowledge of wheels enable them to distinguish between a really high grade machine, and that which is of inferior quality. In consequence, the sales of the Speirs wheels have steadily increased, without the aid of extensive advertising and costly agencies. This year, the officers of the company have decided to give the people everywhere, an opportunity to get a strictly high grade wheel, at the lowest possible cost. We quote the following very warm endorsement of this company and wheel from a Worcester publication of recent date: "The purchaser of a Speirs wheel has other advantages besides the satisfaction of getting a first-class wheel at a moderate price. One of these is that there is a solid and substantial company behind it. Other wheels have been extensively advertised and sold for a few seasons; then the company making them has gone out of business, and if a part of the wheel was broken, it could not be duplicated without a great deal of expense and a loss of much time. Duplicate parts of the Speirs wheel are kept constantly in stock at the factory."

Too many of the wheels now on the market are made largely of stamped metal, but in the Speirs wheel, all of the connections are made of drop forged steel, and the hubs are bored out from a solid piece of steel. Purchasers are given options in the matter of handle bars, pedals and other matters, and the highest range in the way of gears is allowed. The Morgan & Wright single or double tube tire, the Hartford or the League tire, may be chosen, and the frame enameled in black, maroon, blue, green or other color.

The Worcester *Gazette* in speaking of this company says: "Worcester has to-day one of the most complete bicycle manufactories in the world. There are larger factories than the Speirs Mfg. Co., but probably one could count on the fingers of one hand, all the other establishments in this country that are as thoroughly equipped with all appliances for making high grade wheels. Scores of the best known makes of bicycles are not really manufactured in the strict sense of the word, by the companies whose name-plates they bear. These companies in many instances, buy the different parts of the wheel from a number of different manufacturers, and then assemble, and send the wheel out as their own product."

Further information as to this enterprising company, or their product, will be gladly furnished by them on application, or by E. Bissell & Co., Nos. 12 Murray Street and 15 Park Place, New York City.

REVIEW OF THE MARKETS.

Heavy rains and severe floods in the Ohio valley, which at this season of the year are customarily frequent, have recently interfered with shipments and checked business activity, assisting in making current orders less important than usual. That the uncertain tendencies of diplomacy and a natural result arising therefrom, should have some effect on general business, is to be apprehended, but as care is taken to avoid any action premature as to motive or unwise as to results, the country maintains an unusual steadiness under these new conditions. Some projects relying upon financial aid to promote, may have to await the decision of the possible struggle between the two nations, but that any permanent check will be given the advancing tide of our present prosperity, admits of doubt.

Business represents, in its present state of indecision and lack of interest, about as quiet conditions as is possible, even with war in actual progress. All the uncertainties of expression. actions or conclusions which have filled the columns of widely circulated journals ever since the *Maine* disaster, have had the natural result of influencing the minds of the merchants as well as the people at large, until the progression of business methods and commercial success have been relegated to the rear, and await decisive measures on the part of the government or demands of the people for needed supplies, before trade can again be in a normal or natural condition. Once the question is settled as to whether the course of the administration will be to favor Cuba's independence, inaugurate armed intervention, or proceed to the necessity of war, we may then hope to have the excited feelings of our business men settle down to the accustomed labor inseparable from successful prosecution of their vocations.

Wire Nails: The market for this leading staple has not been in the strongest condition since it became evident that the larger consolidation of wire manufacturing interests had to be abandoned, the smaller association resulting from the efforts at organization, not being expected to do more than keep prices from being uncertain and questionable in character according to the size of the specifications offered. The necessarily conflicting competition following this change of base in obtaining full control of the market, has resulted in lower prices being obtainable, and while deliveries beyond the current month are not solicited or entertained, the quotations may be said to be about as they have been for the past two weeks, $1.35@$1.40 for carload lots at mill, good-sized specifications being able to obtain the lower quotation for an immediate delivery. Previous purchases under apprehensions of an advancing price, are still affecting the amount of current sales, which are by no means brisk or large in volume except in rare instances. Prices are not expected to materially improve under existing conditions, affected as they are by the war discussion and lack of trade interest. New York prices may be stated: Carload lots on dock, $1.50@$1.55; smaller lots from store, $1.65.

Cut Nails: No move of importance is noticed in this line, prices being without especial change, and are represented in New York by carload lots on dock, $1.20, and smaller lots from store, $1.25@$1.30.

Nuts, Bolts, etc.: Heavy goods in the way of nuts and bolts have been improving in demand and are in satisfactory condition for future requirements. The recent nominal advances have enabled the manufacturers to market their product under conditions more favorable than during the past season, sharply competing quotations indicating a growing excess of stock, no longer dominating the market as of old, the manufacturers finding it advantageous to work together without friction, under conditions encouraging harmony of action.

Screws: The improved condition of the market for Screws, has a tendency to make analogous goods firmer in quotations, than under the less favorable auspices prevailing last year. These goods had been known to the trade for some time as being marketed at a loss, and the slight advances which were the mid-winter features, having since been well sustained the trade has been greatly benefited and competition generally found less severe.

Cordage: Business has been of an encouraging character recently, evidently not affected by the war bulletins in common with other leading lines. The manufacturers have not, however, caught up with their back orders, and the future prospects are very bright. Prices are well maintained which may be quoted as follows:

Manila, 7-16 inch and larger	Per pound,	cents,		6½
" ⅜ inch	"	"	"	7
" ¼ and 5-16 inch	"	"	"	7½
Sisal, 7-16 inch and larger	"	"	"	5¾
" ⅜ inch.	"	"	"	6¼
" ¼ and 5-16 inch	"	"	"	6¼

A discount of ¼ cent per pound is made for car load lots.

Binder Twine: Continues to be in fair demand. The manufacturers report that many of the larger concerns throughout the West have been hanging off on account of the advancing price and are only fairly supplied for what will undoubtedly prove a remarkable demand when the harvest comes. In the present state of the market it would behoove the jobbers to book their orders, as the indications are the future prices will be on a rising scale, the highest for years. Eastern factories are quoting per pound, white sisal 6½ cents, standard sisal 6½ cents, manila 550 feet to the pound, 7 cents, pure manila, 650 feet to the pound, 8 cents. Car load lots f. o. b. are quoted at a discount of ½ cent.

Linseed Oil: The Dean Linseed Oil Co., No. 181 Front Street, New York, under date of April 1, 1898, quote as follows: In lots of less than 5 barrels, 40 cents per gallon; in lots of 5 barrels or more, 39 cents per gallon. The 5-barrel price only applies to deliveries of that quantity at one time. Boiled linseed oil, 2 cents per gallon higher than raw. Calcutta oil, 54 cents per gallon. Above prices are subject to change without notice.

THE CLEVELAND TRADE.

Constant affirmation and denials about Cuban matters result in much uncertainty and cause hesitation, and will, if continued much longer, create indifference. The benefits predicted by some of the leading papers of this country by war are ludicrous. To suggest that destruction of property increases wealth, is an economic proposition, based on the impression that money and property are synonymous terms; as if more yardsticks would add to the clothing material.

Morality may demand action that will lead to war and financial sacrifice, but to favor war because it will increase the money in circulation, is another form of the silver and greenback delusion. Some great sacrifice may be a moral necessity to modify the spirit of greed. We certainly should not enter on it as a financial speculation.

The trade for March is undoubtedly affected by the war rumors. Some of the fifty millions comes to Cleveland, but the great farming and labor population go on with their

Digitized by Google

work undisturbed. The jobbing and retail trade are not benefited by the disturbed state of the public mind, and improvements are postponed to await events. The season is much earlier than usual, creating an urgency for delivery for goods ordinarily wanted in April, so that March is quite certain to show a large improvement over last year. As predicted in a former letter, binder twine purchases have turned out to be an excellent investment.

Your anniversary edition, celebrating the organization of Hardware Associations, is commendable, for they will modify the cruelties of competition, lessen the strain of business, and increase the altruistic spirit by showing that success does not depend upon injury of our competitors. The Lockwood-Taylor Hardware Co.

THE BALTIMORE TRADE.

Present conditions are scarcely favorable to any great amount of business activity. Trade during March held forth great promises of improvement. The mild weather created a considerable demand for spring goods, and the firm tone of prices was an additional incentive for early purchases. Tha war cloud then was but a speck on the horizon. The past fortnight has brought about many changes. Spring weather has been replaced by snow and frost, (many of the early fruits in this section being destroyed), and the war cloud, like some huge spectre of the sky, seems to threaten death and destruction to the business interests of the community.

The martial and commercial spirit seldom make good bed-fellows, or to be more modern, seldom ride tandem. The one is the antithesis of the other. One is nurtured in darkness and doubt, the other thrives only under clear skies and sunlight. Commerce is a flower of peace and confidence—any agitation wounds it.

Perhaps Baltimore, owing to her close proximity to the nation's capital, feels more acutely the effect of this present agitation. The unrest and anxiety of the week have diverted all thought from trade—the one wish and hope and prayer being "Peace if with honor, or ———." (We dislike to think of the alternative).

By the way, with this issue *Hardware* celebrates its eighth anniversary and devotes its columns to the promotion of trade associations. A worthy cause and a worthy leader seldom fail. This doctrine could not be preached at a more opportune time. While all the religious world at this Eastertide chant the *Resurgam*, what more appropriate commemoration could be yours than to point out to the trade, of which you are the prelate, a resurrection into a new and better order of things?

May success crown your efforts is the wish of

The Tabb & Jenkins Hardware Co.

THE PITTSBURG TRADE.

Hardware Associations are becoming popular. This is the age of co-operative efforts in all kinds of business, and Hardware merchants find the advantage of getting together. Others will ably show the advantages of such associations in this issue of *Hardware*, so we forbear.

Pittsburg is having its full share of the general prosperity which is gradually overspreading the country. Our mills and shops are working steadily, giving employment to a large number of men. Modern machinery displaces a good many hands, as one man does the work of ten under old methods, but these things adjust themselves; new kinds of work are found, new wants are to be supplied, and all will eventually find their work.

The bicycle trade, contrary to expectations, is larger than last season. The drop in price seems to have reached the point where many can buy who were debarred before. The buyer of to-day gets better value for half the money than he got three years ago. The sundry trade is especially large, and is getting into the hands of the Hardware trade more each year. Logan-Gregg Hardware Co.

THE ST. PAUL TRADE.

You may not know that our city is in the banana belt, but such seems to be the fact, for we have had no snow or cold weather during the past winter, and at this writing the sun shines brightly, and it is as warm as a May day. Some wheat has been sown, and everything looks prosperous. Of course we are not entirely happy. We are selling goods entirely too cheap, and cannot see how much money can be made at the prices generally made. We believe in organization. All men are benefited by the exchange of ideas, and becoming acquainted with each other, find out by actual intercourse that our competitors are as anxious to do business for profit only as we are, and that he has believed the same stories about us as we were told and believe about him. Trade organizations are a good thing, if the only result is that we occasionally get a chance to swap ideas with our neighbors. C. W. Hackett Hardware Co.

THE MINNEAPOLIS TRADE.

The general outlook for business here and in the Northwest is fairly good, better, we think, on the whole, than for a number of years, but we do not expect any boom. The country as a whole is prosperous and the cities are beginning to feel this somewhat.

Jobbers are busy; the lumbermen are having a good trade at slightly advanced prices; there is considerable building going on, a little better class, on the whole, than that of last year. There seems to be such a demand for houses, that in spite of the large number of apartment buildings that have been put up in the past five years, a number of enterprises of this character are under way, and as there is a scarcity of desirable dwellings for rent, it would seem that in spite of the hard times, Minneapolis is not only holding its own, but is forging ahead.

We have had a very good winter, building operations having been continued uninterrupted. There is every indication of spring. Prices seem to be fairly well maintained. In event of war with Spain, we think there will be a good demand for everything that the farmers raise, with good prices, which would certainly be to our advantage, but we do not want to see war on that account. time this goes to press the question of war or no war will probably be settled.

We are for the freedom of Cuba, and vengeance for the destruction of the *Maine*, even if we have to fight for it.

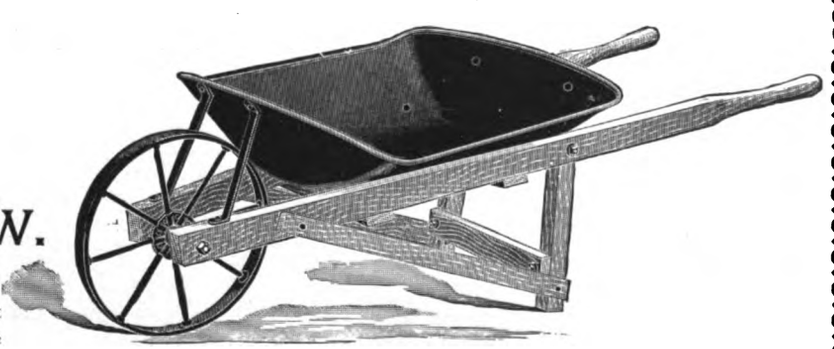
W. K. MORISON & CO.

THE DAVENPORT TRADE.

Work is increasing at the government arsenal here; additional force has been added and overtime required. Navigation opened early, boats are running regularly. Seeding, commenced two weeks ago, is progressing nicely under the clear skies and warm sunshine. We have had several inches in excess of normal amount of moisture. Factories, are, as far as we can learn, running on full time and some are working nights and Sundays. March sales are largely in excess of the same month a year ago. The difficulty in getting orders filled promptly from makers, and increased trade, has a stimulating effect on prices, and is giving traveling salesmen more backbone than usual. If one merchant will not pay them the price asked, they know full well that the other fellow who needs goods for immediate use, will pay if they can promise prompt shipment from stock, and so with the increase in sales comes a corresponding increase in profits which remain still far below what they should be in the general Hardware trade.

We are members of the National Hardware and the Iowa Hardware Jobbers' Associations. We believe each organization is doing good work; if they were both a little more aggressive they would accomplish much more than they are now doing. SICKELS, PRESTON & NUTTING CO.

THE OMAHA TRADE.



March business made a very satisfactory record, and while a good liberal trade has been looked for, the results were even in excess of expectations, and there is no reason why the present month should not make an equally satisfactory showing. General trade throughout the State is in a very satisfactory condition, and enough money is in circulation to liquidate all indebtedness promptly, and trade is running well into a better line of goods than have been called for for several years past. As was expected, there is considerable scarcity in many lines. The trade on steel goods, poultry netting, and other special lines of goods, run so far in excess of the supply that it is a matter of considerable difficulty to procure sufficient goods to fill orders with anything like reasonable promptness. Unless some unforseen contingency should occur, it would seem the West was entering upon a series of prosperous years which cannot but result favorably to the interest of manufacturer, distributor and consumer. Locally, retail trade is in better shape than it has been for a number of years past, and the general prosperity attendant upon the jobbing business appears to be well distributed among the local retail trade.

The Exposition is rapidly assuming shape, and while outsiders who come here to visit it appear to be more familiar with the vastness of the enterprise than those of us at home who are tied down to detail, surprise at the magnitude and scope of the undertaking appears to be general on the part of every visitor.

Relative to Hardware Associations, we have been more or less intimately connected with them for the past fifteen years, and believe they have been of material advantage and benefit to all those who have taken hold of them with the true spirit of fraternalism. We all broaden our ideas and develop new and valuable ones from association with our business competitors. Not only in a manufacturing and jobbing way, but in the organization of the retail trade, as well, we believe there is opportunity for an unlimited amount of good to be accomplished. There is no limit to the possibilities of these associations, and our experience has been that many of the best business suggestions we have ever received have come through association with our competitors and by comparing their ideas and business methods with our own. RECTOR & WILHELMY CO.

THE PHILADELPHIA TRADE.

The month of March closed in a gratifying manner, showing a satisfactory volume of business, in some respects quite an improvement over the year before, while the pros-

pects for the future were most favorable, but it is difficult to foretell what the effect of the war talk will be.

From one point of view, many manufacturers are greatly helped. We know of some factories that are being run to their utmost capacity night and day to fill government orders, and, of course, these factories are practically out of the market, for the time being, on regular goods.

It would seem, therefore, as if this should make a scarcity in regular manufacturing goods with the result of higher prices. but, on the other hand, capital is very sensitive, and war, or the rumor of war, immediately shuts up many purses and puts a stop to many contemplated enterprises which would, otherwise, require beams, girders, steel rails and other manufacturing products, so what is gained in one direction is, probably, offset by loss in another.

We now hear of some enterprises that are being held in abeyance until this question is settled, and this may reasonably be expected to have its effect on trade in the near future. It is hoped, however, that war can be averted with honor to our country, and if so, the future seems bright and promising.

There are but few changes to report in prices and it still remains to be seen what the effect will be of the new Wire Nail combinations, and, apparently, instead of having one large combination, we will have two, or, possibly, more.

Collections have been a little show the past few weeks, but an improvement may doubtless be expected in this particular owing to the large sums now being paid out for wages. It is gratifying to note that the number of reported failures has been less of late, while the sale of tools has been phenomenally increased. This seems to point to the fact the mechanics are gradually getting to work again and that dealers are feeling the result in better and more profitable trade. Biddle Hardware Co.

THE GRAPHITE TRADE.

Here is something which may be of interest, it being a copy of a letter recently received from the West:

"Send me the price list of your Crucibles. The Klondykers are bringing down big quantities of gold to be assayed, so there is quite a good demand for crucibles."

Business generally is in good form, and it requires effort to keep pace with the demand for goods. There is little to say, excepting in a general way. We are decidedly and satisfactorily busy. Joseph Dixon Crucible Co.

Hobart B. Ives & Co., New Haven, Conn., report the most successful season they have ever had for their greatest specialty, the Ives Sash Lock. Their advertisement on page 11 illustrates a few of the leading articles on which their extended reputation throughout the trade has been firmly established.

The Canning Industry.

The United States' canning business consumes annually some 600,000,000 sheets of tin, in which the common fruit can takes up two-thirds of the entire product. This brings the fruit season in close touch with the tin plate industry, and as the present season has been one of exceptional abundance, it will make its mark on the home demand for plate. The can making industry is one of increasing importance, and its demands have evolved some special lines of automatic machines. In New York, Chicago, Baltimore, etc., automatic machines are employed having a daily capacity of 40,000 cans. In this special form of tin consumption, that is likely to increase rather than diminish, the American producer has a broadening market.—*Exchange.*

The Harrington & Richardson Arms Co., Worcester, Mass., have issued a leaflet of their revolvers in which the various makes and parts are fully illustrated and described. In a note of introduction they say: "We offer as complete and fine a line of revolvers (considering their cost to the purchaser) as any manufacturer, and we have without doubt made and sold more revolvers in the past 27 years than any other house. Our revolvers are as safe and their construction is as simple as any, and only the best material is used in their manufacture. We guarantee all our goods to be in perfect working order and well finished when they leave our factory. We will replace, without charge, any parts which may prove defective in actual use, when such parts are returned to us, with explanations, and have not been tampered with. Our system of inspection warrants our doing this." This catalogue will be sent on application.

The Kilbourne & Jacobs Mfg. Co., Columbus, Ohio, certainly must be classed among those American manufacturers who not only fill their own country with their fame, but are extending out across the seas, for new worlds to conquer. Wherever under the sun the wheelbarrows are used for the extension and progress of civilization—and, when we come to think of it, the wheelbarrow is a bigger thing than it usually has credit for—the name of Kilbourne & Jacobs is well known. A sample of their product is found on page 159 of this issue, and their line is very extensive, their factories being among the largest in America. Full particulars as to their goods, the high quality which they sustain, and the good service which they render, can be obtained by addressing the company at Columbus, Ohio.

The American Sugar Refining Co., Brooklyn, N. Y., are placing a new fireproof roof over their No. 1 boiler house. The roof will be fireproof, consisting of steel trusses covered with corrugated iron, and is being furnished by the Berlin Iron Bridge Co., of East Berlin, Conn.

Fire at Bruce & Cook's.

On Saturday afternoon March 26th, Bruce & Cook, dealers in tin-plate, sheet-iron and metals, Nos. 186 to 190 Water Street and Nos. 248 and 250 Pearl Street, were visited by quite a serious fire in the large four-story brick warehouse forming a portion of the premises occupied by them on the Pearl Street end. The establishment referred to is a substantially built edifice in which the firm constantly carry an immense stock of goods, and in the cellar of this structure the fire originated, and was only discovered after the business had ended for the day; when only a clerk or two remained in the office building connected with this warehouse. A great smoke was created from the nature of the fire, and it was some time before the engines could get to work. The fire in the meantime had made rapid progress and was fast making its way up to the main floor, but was prevented by the hard work of the firemen from reaching either the upper floors, or the offices adjoining.

In the cellar which was used for the storage of tin-plate the greatest loss was suffered, about 18,000 boxes of the plates being damaged or were totally destroyed by fire and water. The solidity of the building, in the construction of which the heaviest timbers and beams were used, assisted materially in limiting the ravages of the fire, the damage even as it was reaching the amount of nearly $100,000 on stock and buildings.

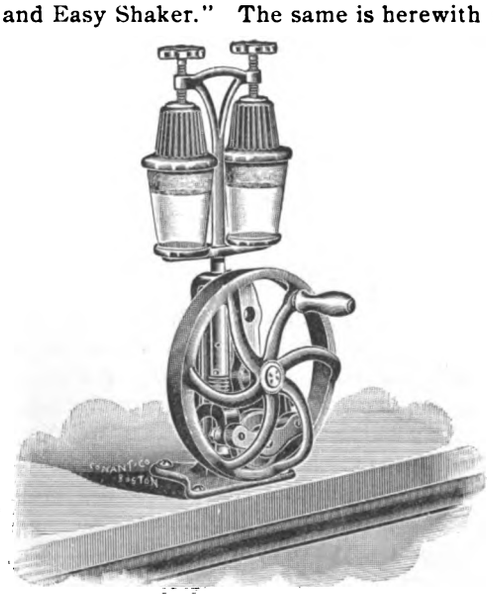
Arrangements were at once perfected by the firm with the several mills represented by them, which will enable them to immediately replenish their stock without delay, and consequently the temporary disability resulting from the fire will be scarcely felt. Their competitors in the trade with a magnanimity worthy of commendation, have in every direction extended a helping hand, showing the great esteem in which this old and highly respected firm is held by the trade at large, which sympathizes with their misfortune and will do everything possible to mitigate its unavoidable inconveniences.

The American Steel & Wire Co.

At a meeting of the directors of the above newly incorporated company, held in Chicago during the past week, the following officers were elected and appointed:

John W. Gates, chairman.
John Lambert, president.
William Edenborn, first vice president.
Isaac L. Ellwood, second vice-president.
Stewart H. Chisholm, third vice-president.
E. T. Schuler, treasurer.
E. J. Buffington, secretary.
Frank Baackes, general manager.
C. H. Garvey, auditor.
E. H. Gary, general counsel.
E. C. Lott, general sales agent, Chicago office.
W. H. Howe, manager, Pittsburg office.
F. E. Paterson, manager, New York office.
E. R. Pool, Denver agent, with jurisdiction over Colorado, Utah, Wyoming and Montana.
W. W. Bierce, New Orleans, agent in central Louisiana, Mississippi, Alabama, Georgia, Florida, North Carolina and South Carolina.

They will have in addition to above, branch offices at Cleveland, Louisville, St. Louis and San Francisco.



A Chainless Bicycle.

The Howard Chainless Cycle Co., No. 759 Summer Avenue, Newark, N, J., are placing upon the market a chainless bicycle, that is making its way with great succes in the wheeling world. It seems to have succeeded in furnishing all the requisites for a successful wheel of this pattern, and has also succeeded, by the use of a shaft with bevel gear in crank hank hanger and rear shaft, in dispensing with the sprocket and chain, and placing on the market a wheel that has passed from the stage of experiment to that of assured success.

"The growing popularity of the chainless bicycle, both for business and pleasure, has brought many makers into this field of manufacture, some instances without any special fitness for the high class workmanship required; in other instances with an untried device not practical and attractive only on account of its supposed cheapness. The Newark concern entered the field having the two important factors necessary to success, that is, experience, and a practical marketable product. In selecting a chainless bicycle, one does well to note that the wheel made in Newark is a strictly high grade bicycle, the result of large experience, rather than an experiment. The chief aim of the manufacturers is to make it of but one quality, the best that capital, superior material, experienced workmanship and superb facilities for manufacturing can produce. The Newark wheels show their superiority in nonwearing qualities, ease of adjustment, perfect alignment, absence of lost motion, protection from mud and dirt, ease of action generally, and great gain in strength. It is a matter to be proud of that this fine chainless wheel was brought to the successful stage in Newark."

"Quick and Easy" Shaker.

The Erie Specialty Co., Erie, Pa., are about to place upon the market a new Milk Shaker, to be called the "Quick and Easy Shaker." The same is herewith shown,

and as will be seen, is arranged for counter or table, and can be securely fastened to the counter convenient to the soda fountain, and being small, requires but little room. It is described as working with rubber friction, making it very quick and easy to operate; it is perfectly noiseless, and no vibration is therefore transmitted to the counter or shelf. Glass caps are provided for the tumblers, and one-half dozen tumblers and recipe for making syrups come with each machine. In speaking of it, the manufacturers say: "It is the cheapest and best shake ever put on the market; is something essential to every soda fountain in mixing lemonade, milk shakes or other beverages."

The National Association of Credit Men has under investigation at the present time several failures that present evidences of a fraudulent character. The policy of the Association in matters of this kind is clearly defined. If fraud is reasonably determined, in either or all of these cases, prosecution will be undertaken, with a view of bringing proper punishment to those who have done wrong, irrespective of financial settlement. The Association is determined to make fraudulent failures dangerous as well as unprofitable.

The Death of Homer Foot.

Homer Foot, one of the best-known business men and most prominent citizens of Western Massachusetts, died at Springfield, April 6th, in his eighty-eighth year. Mr. Foot was a native of Springfield, and most of his life he spent there in active business pursuits. At the age of thirteen he entered the employ of James S. Dwight, whom nine years later he bought out and succeeded under the name of Homer Foot & Co., importer and domestic dealer in Hardware, iron and steel—a house that has continued under that name until now. In addition to conducting the business of this house, Mr. Foot took an active interest in the development of manufacturing enterprises and in railroad projects.

In the early days before the war, the firm of Homer Foot & Co. were the largest dealers in Hardware and iron and steel in New England outside of Boston; and their importations of iron and steel were not exceeded by any firm even in that city, imported stock in that line being the only reliance. The importations of iron and steel reached such important figures as 500 to 1000 tons at a time.

With Erastus Corning, of New York, and ex-Governor Fairbanks, of Vermont, he was one of the commission under whose direction that noble work of national importance, the Sault Ste. Marie Canal, was brought to a successful completion.

Throughout New England especially there was scarcely a commercial enterprise initiated at the time referred to, with which Mr. Foot was not in some manner personally interested. His activity may be learned from a list of some of the offices he filled—President of the Hampden Watch Co. and of the Glasgow Gingham Co.; Director of the Massachusetts Mutual Insurance Co., the Pyncheon National Bank, the Lamb Knitting Machine Co., the Hampshire Paper Co., and the Florence Sewing Machine Co. He only retired from active life a few years ago. He never took an active part in politics, although he was once made unwillingly, the Whig candidate for Lieutenant-Governor of Massachusetts, and was, without his consent, nominated as Mayor of Springfield. He was for a time Colonel of the Fifth Massachusetts Regiment. Mr. Foot married Delia, one of the daughters of James S. Dwight, his predecessor and employer. They celebrated their golden wedding in May, 1884. Mrs. Foot died last spring, after sixty-three years of married life, and up to that time there had been only one death in the family—that of the eldest son.

Nine children survive him, one of which Mr. James D. Foot, is the president and treasurer of the Kearney & Foot Co.

The funeral services were held in Springfield on Saturday last.

The Romance of Commerce.

Some day the romance of commerce, as associated with the marvellously varied crafts of Sheffield and district, will find fertile scope for practiced pen. There is abundant material. As far back as 1485, at the battle of Bosworth Field, the Earl of Richmond's army used arrows of Sheffield make. These had the credit of being "longer, sharper, better ground, and more highly polished," than those of King Richard. Indeed, the historian of the period states that they were the finest that had ever been seen on the battlefield. In the beginning of the lordly Shrewsburys, who held sway in Sheffield so long, arrows and bows were purchased here for the use of the army in France. Johnson, the antiquary, found a record of a hundred and thirty gross of arrow shafts at fourteen pence, and five thousand arrow-heads at fifteen pence per hundred, sent from Sheffield for government use. The cutlery craft itself originated in very early times. In the sixteenth century it had so greatly extended that it was necessary to control the business by the officers of the court leet of the manor. Juries of cutlers were then empanelled to assign marks, enrol indentures of apprentices, and levy fines upon such artisans as had contravened regulations drawn up by the cutlers and approved by the court. Probably the Guild of Cutlers then in power was but the successor of others which had existed many years before. One point is clear. In 1570 the Duke of Alva drove many of the best artisans from the Netherlands. The Queen's Chamberlain was then the Earl of Shrewsbury, a shrewd, far-seeing nobleman. He advised that they should be received and settled in various parts of Her Majesty's domain. While the woollen workers were sent to Leeds and other parts, the earl had the iron workers located on his own estate in Hallamshire, which comprised Sheffield and district. It was in this way that the iron and cutlery industry were firmly settled in Sheffield. Many interesting stories center round the making of knives, which cannot be here dealt with. One may be given as a sample: In 1626 the Duke of Buckingham was stabbed by Lieutenant Felton, who left the knife in the body. It had a corporate mark upon it. This easily led to the discovery of the maker, one Thomas Wild, of Sheffield. Wild, who was taken to the Earl of Arundel's home, in London, identified the mark as his, and added that he had made two of the kind for Lieutenant Felton, when that officer was recruiting at Sheffield. He had charged tenpence for the knives. This information led to the arrest and conviction of the assassin, and Mr. Wild was highly commended. The records of the Rodgers firm could furnish many similarly interesting experiences, referring both to this country and to other lands.—*Exchange.*

Novelties in Toys.

A curious toy, new this year, for small children, is a miniature hand truck, of the kind that is used in stores and by freight handlers, in railroad freight houses and on wharves in handling goods and freight. It has a bale and feet of light iron, and in its proportions it is precisely like the big trucks. It is twenty-seven inches in length, and sells for 25 cents.

Miniature yachts, most commonly made of wood or tin, are now made also of rolled steel. The steel yachts are new this year. They are like the Defender in shape and are sloop-rigged. They are made in sizes ranging from fourteen inches to twenty-four inches, and they sell at 50 cents to $1.50 each.

Another new boat is a small steel propeller, whose wheel is turned by clock work, which is wound up by turning the smokestack of the boat. This boat is retailed at 50 cents. The car that winds up is an old mechanical toy. This toy in a new form is presented in the trolley car, with the trolley pole rising at the usual angle from the roof. The car is wound up by means of its trolley pole. The seats of the car turn over, and it has on the outside adjustable signs that can be turned to show the destination of the car. The car is made of steel. Steel holds paint better than tin does, and it is stronger.

Manufacturers of doll carriages keep up with the styles of baby carriages, whatever they may be. The newest thing in baby carriages is the now familiar vehicle, like a chair on wheels, called the go-cart. Dolls' go-carts are made in a large variety of styles and sizes.

American mechanical toys are exported to a considerable extent, and we export also, chiefly to South Africa and Australia, considerable quantities of velocipedes for boys and girls, and also of such things as doorway swings and buckboards and other styles of children's wagons, made of wood, which are shipped knocked down, to save space.—*New York Sun.*

"If I am anything," said Smith, "I am *sincere*."
"You mean *sin seared*," said the cynic Brown.

The ALASKA LAWN SWING.

THE demand for the **Alaska** is such that its merits and selling qualities cannot be questioned. Made of good material and well finished. Its peculiar construction is such that it can be easily folded, set up or taken down in an instant. The seats are thoroughly adjustable; can be placed in any position desired. While the **Alaska** possesses many desirable features not found in others, yet its simplicity in construction enables us to quote——

A price to the trade only, of $3.75 each; terms net cash.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

ALASKA SOLDERING IRON HANDLE

FITS ANY IRON.

Want to see one? Send us 25c. We will mail you one.

. . . ALWAYS COLD.

Sold by all Jobbers in Hardware or Plumbing.

Made only by . . . .

TROY NICKEL WORKS,

ALBANY, N. Y.

"READ IT FROM THE FIRST ISSUE."

C. E. Neale, Worcester, Mass.: Please find enc'osed the cash for the coming year's subscription to HARDWARE. I have read it from the first issue, and intend to keep right along reading it, and wish you success.

"BETTER THAN ANY OTHER TRADE PAPER."

S. L. Allen & Co., Philadelphia, Pa. [*Agricultural Implements, etc.*]: We have found results of our advertising with you better than in any other trade paper.

"'HARDWARE' IS READ BY THE DEALERS."

Forehand Arms Co., Worcester, Mass. [*Arms*]: In the numerous inquiries received daily, reference is made to HARDWARE as often as to any other publication, which shows that HARDWARE is read by the dealers.

"USEFUL AS AN ADVERTISING MEDIUM."

Smith & Egge Mfg. Co., Bridgeport, Conn. [*Traps, Locks, Chains, Pulleys, etc.*]: We have found your paper very useful as an advertising medium.

Digitized by Google

THE POPULARITY

Of our premium list, evidenced by the eagerness with which new subscribers are availing themselves of the opportunities offered, has compelled us to extend the time limit We will therefore continue this offer until further notice to **NEW 1898 SUBSCRIBERS.**

ALL THE NEWS. **HARDWARE** HARDWARE EXCLUSIVELY.

Needs no introduction to the Hardwareman. He already knows what a valuable adjunct to his business this semi-monthly visitor is, with its reliable "Prices Current," its "Market Reviews" and its general news of interest to the Hardware trade.

FOR $1.00 We will send "**HARDWARE**" for one year, and ANY **ONE** of the following articles:

A dating stamp that will last till 1902, with 12 special entries for marking letters and bills.

Huebsch's Year Book.

A 365-page Cloth Bound Diary—one page for each day in the year—4½x9 inches, bound in flexible cloth covers. Invaluable to merchants, manufacturers, bookkeepers, clerks, etc.

Indexed Coupon Books

representing one hundred dollars—to enable you to put your business on a cash basis—do away with pass books——to prevent bookkeeping erro-s. No disputes over accounts—no delinquent debtors or bad accounts. Used throughout the country now instead of credit system.

A numbering stamp, which will number from 1 to 999,999. You can number every article in your store with this stamp. It is indispensable to the careful retailer.

FOR $1.25 We will send "**HARDWARE**" for one year and your choice of the following six premiums:

1. A Perfect Fountain Pen . . . . with 14 kt. gold pen and a filler, warranted to give the most satisfactory results. Made by one of the oldest fountain pen houses in America, and fully guaranteed. . .

2. A Silver Mounted Stationery Set. Seal, letter opener, and paper knife with pearl blade—that gives an air of elegance to your desk. . . .

3. Huebsch's Year Book . . . . (large size), 6x9 inches, bound in flexible cloth, made to last. IT IS YOUR BUSINESS MEMORY, and will not fail you.

4. If You Have a Good Name . . . you may like to see it in your window. We send you ten of the best white enamel 4-inch letters, with a half pound of best cement and full instructions for putting up. If 4-inch letters are too large, send for twenty 2-inch letters If you require more than the quantities specified, we will send you extra letters; 4-inch at 6 cents each, and 2-inch at 3 cents each. . . . . .

5. Half Dozen Photographs. . . . . Send us any photograph, with your name and address written plainly on the back, and we will return it to you together with six medallion copies of the original, mounted on celluloid, with a wire stand. We guarantee the medallions to be as good as the original. . . . .

6. Bushnell's Price Book . . . bound in seal morocco, 4¾x6⅞ inches, 200 pages, adapted to the use of the traveling man, the home salesman and the office. Neatly indexed, red edged, ruled faint, printed headings. This practical Price Book is in almost universal use. . . . . .

"BROUGHT US MANY PAYING CUSTOMERS."

Defiance Bicycle Co., Defiance, Ohio. [*Bicycles*]: We are much pleased with the results obtained from our advertisement in HARDWARE during the past season. It has brought us many paying customers, and we feel that the money paid you was well invested.

"OF INTEREST TO LIVE DEALERS."

Van Voorhis & McNair, Crawford, Neb.: We like the journal very much. It always comes to our desk full of bright, sound matter, that cannot but be of interest to all good live dealers.

"BEST CLASS TRADE FROM HARDWARE LINE."

Sager Mfg. Co., Rochester, N. Y. [*Bicycle Saddles and Specialties*]: We have received a large proportion of the best class of trade from the Hardware line. We always regard it advisable to dispose of our goods wherever we can do so to advantage. We see no reason why the Hardware trade should be excepted.

"WE GET RESULTS."

New York Cycle Supply Co., New York. [*Bicycle Supplies*]: HARDWARE is all right as an advertising medium. We get results from it.

New Jersey Wire Cloth Co.

IS A GOOD ONE.

Morgan & Wright, Chicago Ill. [*Bicycle Tires*]: There can be no question about the advisability of using the Hardware trade as a means of disposing of bicycles and bicycle parts, and as to the efficiency of HARDWARE, we can only say what we would say in reply to an inquiry from any other publisher, i. e., we have no direct means of knowing whether our "ads" do us good or not. If we insert an "ad," it is on our judgment that the publication is a good one.

Digitized by Google

A GOOD THING.

IT'S IN THE TEETH.

The Patent "REFORM" Curry Comb is composed of three shallow, oval trays, with corrugated edges. The parts are struck up from a fine grade of cold rolled steel, heavily tinned and bronze lacquered, firmly riveted together and warranted not to rust. The outer dimensions are 6½x4¼ inches and by reason of the large cleaning surface and peculiar arrangement of teeth, the comb will do its work with a large saving of time and labor, cleaning with equal thoroughness both long and short coats. There are no places to accumulate hair and it will not tear or injure the brush, the comb being quickly freed from accumulation by giving its face a gentle tap.

HARDWARE

VOL. XVII APRIL 25, 1898. NO. 2.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

BRANCH OFFICES: { CHICAGO, - No. 1142 MONADNOCK BLOCK. BOSTON, - - No. 33 EQUITABLE BUILDING.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
JAMES H. KENNEDY, - Editor and Manager.
HENRY HOPKINS, - - Associate Editor.
FRED. A, CATON, - - Asst. Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The views of business men regarding the possibility of war resulting from the Cuban complication have not been taken so seriously as to interfere with a free movement of goods under a possibly increasing demand through all the ordinary and regular trade channels.

In the East the demand has not as yet assumed an importance which inspires the highest confidence, and large supplementary orders for spring supplies form the exception when contrasted with other sections of the country. The feeling there developed has been of a more pessimistic character, and contrasting opinions founded on the differing shades of demand are not to be wondered at.

An increasing area for crops is being seeded, stimulated by the high prices for cereals that are still obtainable; and the supply of machinery suitable for a proper harvesting under economical conditions, will produce results in the agricultural sections of the country which, war or no war, will certainly add to our national wealth. Crops will arrive at maturity beyond a doubt, and form the basis of a continued prosperity, which, independent of any war conditions, the country is destined to know and enjoy. The movements having reference to future business on the part of our merchants, will be ordered in a thoroughly conservative manner, and it is extremely doubtful under the circumstances if any pronounced advances in prices will prove the feature of the markets, even when under the protecting wings of a controlling combination. It is the general supposition that the war, when entered upon, will prove more of a naval demonstration than one requiring a large enrollment among the militia of the various States, and thus the chances of unsettling the general run of business by forced changes of importance give but little concern to those immediately interested.

The cancellation of orders for needed staples by the dealers of the country have been relatively few and unimportant, and the fact that many order books were filled early in the season with anticipated wants, now in process of being supplied, keeps the manufacturers in a hopeful condition, with the natural result of sustaining prices to a fair extent. Many lines of goods even under these circumstances, are not in full supply and letters urging prompter deliveries are of daily occurrence.

Our Hardware Association Number.

Once upon a time, a very eminent American newspaper referred to an eminent American candidate, as "a good man, who weighs 260 pounds."

This characterization, while not complete in the way of description, was full of suggestion. It calls to our mind the fact that each copy of our Hardware Association issue of April 10, 1898, was a fine specimen of newspaper work, and weighed two pounds and three ounces!

The many congratulations which have been extended us from all quarters, personally and by mail—a few of which we reproduce elsewhere—have fortified us in the pleasant belief that that number was the largest, handsomest and most valuable specimen of a trade journal ever issued—especially in connection with the great industry which we represent.

These are strong words, but we believe that a careful examination of the number referred to will show that they are entirely justisfied. The theme was exceptional in its character and importance. For the first time since their organization, the records of the various great and small Hardware Clubs and Associations of the United States and Canada, were gathered and presented in a compact form, and in such manner that they can be laid away for future examination and reference. We feel entirely satisfied with the manner in which this work was done, and can say this without incurring the charge of lack of modesty, as this work was largely performed, as a willing and patriotic service, by the various representative officers of these associations. In almost every case, our request for information was gladly complied with, and an examination of the number referred to will show the labor and care expended by these various officers in the compilation of the records of the Associations in which they are especially interested.

The preparation of a number containing one hundred and ninety pages, filled with illustrations, choice reading matter, colored insets and a great deal of special advertising, entailed a large amount of labor and expense, all of which were cheerfully furnished and, in view of the results, have become matters of satisfaction to those who are entrusted with the welfare of *Hardware*. We feel that in this number we have

Digitized by Google

demonstrated to the trade everywhere, that *Hardware* is at the service of that trade in any possible way; and we also feel and know that any effort or enterprise put forth in the preparation of a special of this character, is ably, warmly and patriotically aided and seconded by all, within the trade and without, who can in any way contribute to its success.

At Last.

Resulting from the measures before Congress empowering the President to do as he deemed advisable, has made necessary the presentation of an ultimatum to Spain, and the promulgation of a policy of intervention which we hope will bring a lasting peace through force of arms, and create a rehabilitated and stable government, where now is a state of desolation only.

The long-expected message was a firm and temperate document with a purpose back of it, from the assertion of which the President has not swerved a hair's breadth since the agitation started. For the last half century in Cuba, one insurrection after another, at varying intervals, has kept that fruitful island in a state of turmoil and unproductiveness, which reached its climax in the methods adopted by the butcher Weyler in a policy of devastation and reconcentration toward the Cubans, the destruction of the *Maine* being a natural corollary.

Congress, when presented with the facts in the case, as announced in the message, were not so ready with a remedy as their previous discussions had led one to expect. They saw at last the great and serious responsibility involved in a crisis such as now confronted the nation, and that a single false step from that prudent and dignified regard for the national honor, would ruin our cause before the nations of the world, and hold us up to ridicule instead of respect.

We know now that the horrors of this uncivilized warfare upon the unfortunate Cubans must stop, and if our efforts result in the pacification of the contending forces in Cuba, the termination of hostilities between the government of Spain and the people of Cuba may, under our auspices, result in the establishment of a government upon that island worthy of our sympathies and entitled to our earnest support and encouragement.

May It Be Brief.

It is a very natural conclusion to come to, that the relations existing between the United States and Spain at the present time, must operate adversely in reference to our foreign trade, now so largely established after continued expenditure and persistent effort. This apprehension would cause us to hope that the struggle between the two countries would be short, sharp and decisive. The steady increase in our exports is of a most encouraging character, being for the nine months of the present fiscal year in excess of our imports, an amount approximating $471,000,000, and this was an increase compared with the corresponding period of the last fiscal year, of over $147,500,000. Taking the month of March, for example, the total exports for the month were valued at $112,817,863; which represents an increase of over $25 500,000, compared with March, 1897; while imports, by comparison, compared with March, 1897, amounting in value to $61,-507,437, was a decrease of over $14,800,000. In these statistics, it is also noted that the dutiable exceeded the duty-free imports for the month by over $8,000,000. In the corresponding month of 1897, the non-dutiable exceeded the dutiable imports by over $5,800,000.

This is a very gratifying condition of affairs, viewed from a national standpoint, as affecting our crop markets and the placing of our manufactured products, which last show a gradually expanding ratio of importance. These relative results, a change in which may be apprehended by a state of war between Spain and the United States, were evidently the cause of much anxious consideration on the part of the administration, to which possibly some of the diplomatic delay may be traced. Let us repeat the hope that the settlement of the Cuban controversy, now left to the arbitrament of war, shall be short, sharp and decisive.

"I Represent The Stanley Works."

A beautiful and attractive daughter of New England—as all daughters of New England are attractive and beautiful—employs the above words in presenting the claims of the Stanley Works, with factories at New Britain, Conn., and offices at No. 79 Chambers Street, New York.

This is not intended in a literal sense. The young lady in question, dressed in a modest and yet attractive manner, looks forth from the pages of one of the handsomest and most artistic monographs it has ever been our pleasure to examine.

To quote from the young lady's opening salutation: "If you have a few moments to spare, I should like to call your attention to the merits of some of the goods we manufacture. I am sure that what I have to say will be of interest and value to you."

On the next page, we meet the same attractive damsel, in full length portrait, and with finger upraised in an argumentative manner. "I would have you notice," she is saying, "in the first place, this wrought steel butt-hinge with ball-bearing washers. It is absolutely without a rival for the hanging of heavy doors, and being patented, it is manufactured by the Stanley Works only. Time will permit me to mention but a few of its many advantages."

We meet her several times in the course of these pages, always bright and attractive, and always saying the right thing in the right manner, concerning the products of the Stanley Works. It may be said in passing, that were this young lady in person to travel throughout the length of the land, selling Stanley goods, the factories would have to be enlarged, not only by the addition of that proposed plant in the West, but by others in various sections of the Union. The final and closing scene of this little drama in the way of Hardware goods, shows her, with satchel and jacket, preparing to depart, and we hear her farewell words: "And now I must say good-bye. I hope I haven't taken up too much of your time. Remember that we will be glad to send you at any time our complete catalogue and samples of our goods."

In addition to the portraits above referred to, and the arguments which accompany them, are illustrations of the products of this company, and of some of the leading buildings of the United States in which these are used. All these illustrations are in half tone, on elegant paper, with the cover in colors, upon which the Muse of History is depicted, reading from a book which resembles a Stanley hinge, under which is this quotation: "Report me and my cause aright to the unsatisfied."

We have endeavored to follow this injunction, in this brief sketch of an artistic little work, but cannot carry it out to the fullest extent, because we do not believe that, when Stanley goods are concerned, there are any unsatisfied patrons to be found.

Mr. McKee Returns from Abroad.

Mr. Russell W. McKee, the senior partner of the old established firm of Bruce & Cook, has just returned from abroad, having been absent for 63 days on a comprehensive vacation trip to the Mediterranean and the Orient.

Accompanied by his family, Mr. McKee left New York on Saturday, February 5th, on the North German Lloyd S. S. *Aller*, which was specially chartered for the cruise, with a list of excursionists numbering over 330, which included thirty-five clergymen, bound for Gibraltar, Malaga, Granada, the Alhambra, Algiers, Naples, Pompeii, Malta, Alexandria, Cairo, the Pyramids, Jaffa, Jerusalem, Bethlehem, Bethany, Caifa, Mt. Carmel, Constantinople, Athens and many other points of interest.

An interesting episode occurred upon the eve of his departure. His old friend, Mr. O. B. Lewis, who has long been identified with Calvary Baptist Church, Brooklyn, N. Y., meeting him on the pier, handed him in a morocco case, a pair of silk American flags, which he entrusted to his care, and after stating his personal regret at being unable to accompany the party, asked Mr. McKee to unfurl the flags and place them in contact with every point of interest on the trip, especially in Palestine, and upon his return, to kindly accept one of them for his own use and exhibition, while the other he desired returned to the donor himself, confessing that the associations connected with this souvenir would cause it to be regarded as among his choicest treasures.

Leaving New York on February 5th, they passed through the Azores on February 12th and reached Gibraltar on the morning of the 15th. In the afternoon entering the Mediterranean, the most interesting part of the trip commenced and sight seeing began in earnest.

The most interesting part of the whole journey was the trip from Jerusalem to Samaria and Galilee, which it was necessary for the entire party, consisting of fifty-five excursionists, who were interested in it, to take upon horseback, there being no carriage road and 130 miles to be covered. Six days were allowed for this detour, which extended from Jerusalem to Caifa, and included Beth-el, Jacobs' Well, Samaria, Lake Galilee, Nazareth, etc., a long rest being always made at noon to make easy the fatigue of traveling in this slow manner. Mr. McKee states that on one day he passed 10 hours in the saddle, which speaks well for a good traveler.

The cruise was taken by Mr. McKee especially as a health and pleasure trip, in which leaving New York, with its rough storms, snow falls and all the attributes of winter, the journey of over 13,000 miles was continued through milder latitudes where the countries named were found richly clothed in luxuriant foliage with fragrant flowers in full bloom and all nature wearing her most rejoicing smile and brightest garb. It proved a short season of the most delightful rest, well earned, from the engrossing cares of an expanding business. The constantly changing scenes and surroundings of this memorable trip proved to Mr. McKee and family as restful and interesting as they were enjoyable and instructive. The trip, which proved an extremely interesting and instructive one, was under the management of Frank C. Clark, of New York, who was fully competent to do justice to the occasion, having been a vice consul at Jerusalem and a resident of Palestine for twenty years.

Corner Man and Graphite.

"The Man in the Corner" of the W. Bingham Co., Cleveland, Ohio, sings in this strain the praises of graphite: "This month I sing a song of graphite, universally used and playing no small part in the arts of peace and war. It is graphite that protects gunpowder from dampness and gives its gloss to shot; supplants other minerals in paint and polishes the kitchen range; lubricates bearings of machinery and speeds the bicycle; displaces silver in the photograph gallery and greases the hubs of wagons; is made into crucibles for the smelting of metals and adds to the life of leather belting; cools the heated journals of locomotive bearings and covers the bottoms of racing yachts —and last, but by no means least, makes its mark in the form of a lead pencil. For all these purposes, the Jos. Dixon Crucible Co., of Jersey City, N. J., furnish it. They own extensive mines at Ticonderoga, N. Y., famed for the excellence of their product, and have harnessed the water power of Lake George to their big mills in which the graphite is put through a series of operations upon a scientific basis for reducing it to the various marketable forms; where it is tested and assorted, sized and dressed, air floated and levigated, vexed with much cleansing from impurities and finally presented to the purchasing public in attractive shapes. These people make over 500 styles of pencils, with ten different grades of hardness. They make special pencils to suit special professional needs—artists and editors, car inspectors and carpenters, drawing classes and metal workers, tailors and stenographers—as well as you and I and the other sixty million people who use this humble adjunct of civilization and have our own particular ideas as to just what constitutes the best thing in a lead pencil. The Dixon brand covers an assortment of grades, sizes and kinds that will enable all of us to find just what we want, and will permit you to satisfy your entire trade without putting in a pencil of any other manufacture."

New Members of Hardware Club.

At a meeting of the board of governors of the Hardware Club of New York held on April 14th, the following gentlemen were unanimously elected to membership in the club:

Hall E. Derrick, No. 135 Tribune Building.
J. Remsen Bennett, No. 311 Broadway.
M. C. G. Witte, No. 311 Broadway.
Elbert H. Baker, No. 48 Tribune Building.
Willard M. Spear, No. 445 Pearl Street.
W. Van Benthuysen, World Building.
H. M. Sadler, Jr., No. 9 Murray Street.
Abram C. Denman, No. 85 John Street.
John W. Greene, No. 17 Murray Street.
Albert E. Duncan, No. 79 Chambers Street.
Robert W. Lesley, No. 22 S. 15th Street, Philadelphia.
John T. McRoy, Chicago.
Irvin E. Rockwell, No. 51 La Salle Street, Chicago.
Nelson A. Gladding, Indianapolis.

The standing committees for the coming year, which were announced by president Peter McCartee, are as follows:

Admissions: George H. Sargent, chairman; Edward C. Van Glahn, Alfred D. Clinch, Richard R. Williams, Robert H. Swayze.

Finance: Webster R. Walkley, chairman; George J. Laighton, Mortimer C. Ogden.

House: Eugene Bissell, chairman; James D. Foot, Arthur G. Sherman, Edward C. Van Glahn, J. Leonard Varick.

Library: Richard R. Williams, chairman; Thomas F. Keating, James H. Kennedy.

The depth of the Atlantic between the Canary Islands and the West Indies is something awful. A pretty level bottom runs right away from the African Islands to the American ones, gradually deepening to nearly 19,000 feet. At this spot we might sink the highest point of the Alps and still have nearly half a mile of sea-water covering it.

Gunpowder dates from A. D. 346, while smokeless gunpowder dates back to 1845.

A Card From the De Haven Mfg. Co.

Editor Hardware: We notice in your issue of April 10, 1898, an advertisement by one of our competitors, which purports to be an extract from an order or decree of the Circuit Court, and having attached to it an affidavit made by the president of the company printing it, which is intended to give the impression that this order or decree was issued against us on our Improved "Trojan" Box Straps, in February, 1898, or anything else we make. In justice to ourselves and the trade, we are obliged to protest against such methods of advertising as this, and assure our numerous customers and the trade generally, that *no decree or order* has been issued against our manufacturing our Improved "Trojan" Strap, which is a strip of 300 feet in length without a rivet, and an invention of our own, and is the only strap we have made or sold for the last two years.

From the high position occupied by your paper in the trade, the esteem in which it is held generally, and the known careful manner in which it is managed, we feel assured that you have been misled in allowing this advertisement to be inserted in your publication, and that the misleading character of this advertisement having been brought to your attention, you will, as a matter of justice to yourself and of fair dealing to the trade generally, which relies upon the good faith and accuracy of your paper, do what you can to place this matter before your readers in its true light, and thus rectify the wrong done us by the printing of the advertisement referred to, in your earlier issues.

Respectfully,

The De Haven Mfg. Co.

Brooklyn, N. Y., April 16, 1898. H. De Haven, Proprietor.

Association Work in Jersey.

Editor Hardware: I regret that I could not give you detailed information in regard to the Hardware & Stove Dealers' Association, as it was so long ago that I have forgotten them. My firm has been identified in the past twelve or thirteen years with nearly every kindred association that included Jersey City merchants engaged in our lines of business. The Hardware & Stove Dealers' Association included New York, Brooklyn, Jersey City and Hoboken, with no restrictions on dealers of surrounding cities. As I remember the facts, Mr. Stantial, of Waring & Stantial, on Third Avenue, New York, was particularly active in the matter, and aside from Mr. Vanderbilt, probably did more work than any other member. The Association was admitted to be an urgent necessity, but failed to accomplish more than the establishment of ties of friendship among its active members.

At present my firm are members of the Merchants' Protective Association of Hudson County and the Master Plumbers' Association of Jersey City. These are not distinctively Hardware Associations, but as many dealers are members of them, perhaps you would like some information in regard to them. The M. P. A. was started over nine years ago with about twenty-five members; to-day it numbers about three hundred. All reputable merchants are eligible to membership. The principal objects are promotion of good will among members and protection from dead beats, of which there are over 3000 names on the Black List. James Newton, of Newark Avenue and Seventh Street, is the efficient secretary. A few of the Hardware members are Wood & Menagh, W.H. Dickinson & Co., J. Ringle & Son, M. Courain, John W. Laws and others.

The Association is an example of what combined individual effort will accomplish in furthering an object of common interest to all concerned. Each member is a committee of one on new members. Social intercourse is promoted and restraints and barriers between rival merchants are broken through.

The M. P. A. has had as presidents an insurance agent, a saddler, a grocer, a Hardwareman and plumber, and at present a butcher, Jas. T. Gough, of Grove Street.

The Master Plumbers' Association was organized about three years ago. John McDonald is the present president. The direct benefits of this Association are not so noticeable as in the M. P. A., but one result, namely, the engendering a better feeling among the master plumbers, is worth far more than the cost of membership. The Association is a part of the National Association and partakes of all the benefits that strong body is able to confer.

Both of the above named Associations were organized and are now being carried forward, quietly but energetically. There is a movement under way to try and increase the membership of the M. P. A. to 500.

I would take this opportunity to express the interest and pleasure I find in reading *Hardware*. The articles are clear and crisp. The opinions from representative merchants are pertinent and instructive, and form a desirable part of your paper. The editorials and market quotations are full of information, and, in fact, there is seldom a sentence from cover to cover that is not the correct one and in its right place. Yours truly,

Robert Anderson,

Jersey City, N. J. Trustee M. P. A.

Golf Goods Ready.

The Bridgeport Gun Implement Co. now have their golf department in full running order, under the able supervision of John D. Dunn, a member of the famous golf family. The marvelous growth of the game in popularity, and the formation not only of numerous private clubs, but also of public courses, has necessarily increased the demand for golf goods throughout the country. Many Hardware and sporting goods dealers have commenced to handle these goods in connection with their other business with very satisfactory results.

The Bridgeport Gun Implement Co., New York office, No. 313 Broadway, will furnish prices and quotations on their full line upon application.

A correspondent of *Hardware* writes us that he is "the inventor of a mouse trap which can be converted into a rat trap, which can be put upon the market together or separately." He has a rough model, which works automatically and successfully, and as the trap is constructed mostly of wood, can be manufactured economically. He would like to place this in the hands of some legitimate manufacturer in some form or another, by which it can be properly placed upon the market. Any communication concerning this addressed "Rat Trap," care of *Hardware*, will be forwarded to the gentleman referred to, and communication thereby opened.

E. T. Barnum, so long and well known as a manufacturer of wire work and iron work, in Detroit, Mich., informs a correspondent of *Hardware* that his business for 1898, up to April 1st, is almost double what it was during the corresponding period of 1897. This certainly does not suggest hard times in the West.

J. Jones & Son announce a new stock and a large assortment at manufacturers' prices, at their new quarters, No. 64 Cortlandt Street, New York, which they will occupy about May 1st, making use of the entire building. Their specialties are electrical supplies of all kinds.

The largest standing army is that of Russia, 800,000 men; the next in size that of Germany, 592,000; the third that of France, 555 000; the fourth, Austria, 323,000; after which come Italy, with 255,000; Britain, with 210,000; Turkey, with 160,000; and Spain with 145,000.

SOME BIRTHDAY CONGRATULATIONS.

J. A. Warner, Wyeth Hardware & Mfg. Co., St. Joseph, Mo: The anniversary number of *Hardware* has just reached me, and you are certainly to be congratulated upon having brought out the most artistic Hardware journal that I have ever seen. In addition to this it is "chuck full" of interesting matter from "kiver to kiver," as our friend Stuart Robson would express it. Again I congratulate you, with best wishes for the continued success of *Hardware*.

Richard W. Montross, Wolverine Handle Factory, Galien, Mich.: It must be admitted that the publication of your April 10th issue, is a great credit to your enterprise.

O. V. Dodge, secretary Kansas City V. I. & H. Club, Kansas City, Mo.: Your Eighth anniversary number at hand. You have reason to be proud of it.

The *Age of Steel*, St. Louis, Mo.: *Hardware*, the energetic and successful Hardware paper of New York, comes out with an Eighth Anniversary Number that is a credit to American trade journalism, as well as to itself. It has a beautiful illuminated cover, is printed faultlessly, is profusely pictorial, and, as showing its hold on the gentlemen of the Hardware trade, it contains 188 pages. A special feature is portraits of the presidents of the various Hardware associations of the country, beginning with the Ohio Hardware Association. The great Hardware Club of New York city is given special prominence. All branches of the country are represented, North, South, East and West, so that if the readers of *The Age of Steel* wish to become acquainted with live Hardwaremen generally all they have to do is to glance through *Hardware's* portrait gallery.

T. James Fernley, secretary-treasurer National Hardware Association, Philadelphia: I want to congratulate you on your Anniversary number. I had no conception of what you proposed—indeed was very much surprised and gratified at the appearance of the paper. It certainly contains information which will be of great value from a historical standpoint to the dealers in Hardware for all generations to come, and should be carefully preserved. If opportunity presents itself, I wish you would convey my congratulations to any who may have assisted you in this most successful undertaking.

H. S. Blossom, secretary of The W. Bingham Co., Cleveland, Ohio: We wish to acknowledge receipt of the beautiful edition of *Hardware* which was sent out on your Eighth Anniversary. It is the handsomest edition of a Hardware paper we have ever seen, and is a very fit exponent of the wonderful progress you have made within the past eight years. We offer our hearty congratulations and best wishes for your continued prosperity.

The Ohio Merchant, Cleveland, Ohio: The *Hardware* Publishing Co. issued, April 10, their Eighth Anniversary Number of 188 pages, which is a gem. It is devoted largely to association work and its manifold advantages, and *The Ohio Merchant* will be pleased to reproduce some of its timely suggestions later on, when space will permit.

The *American Grocer*, New York: *Hardware* celebrates its eighth anniversary with an issue of 188 pages, in colored cover printed in red and black, and designated the "Hardware Association Number." It is a remarkable publication, in that it demonstrates the cordial good will and generous support and recognition by the Hardware trade of a thoroughly independent and useful trade journal. Almost every prominent manufacturer is represented in this number, which contains a history of the various Hardware associations, the Hardware Club, and *Hardware*, established by the late and lamented Archibald Paull Mitchell. The editor, James H. Kennedy, and associates, deserve great credit for the zeal and ability shown in making *Hardware* an exponent of the trade. Mr. Kennedy is noted for his public spirit and enterprise in organization work, which has won for him and the journal he represents the full recognition of Hardware interests. We congratulate our esteemed contemporary upon its marked success, and wish for it continued growth and prosperity.

G. W. Barnett, president Southern Hardware Jobbers' Association, Montgomery, Ala.: Your anniversary number of *Hardware* came duly to hand, and we must say that you have certainly made a great success of this edition. It is well gotten up, and contains information of great value to the trade.

New York Belting & Packing Co., New York: Your anniversary number has just reached us, and it is certainly handsomely gotten up. The fine paper used has brought out all the cuts remarkably well, and we are particularly pleased with the appearance of our advertisement.

C. B. Lockwood, Lockwood-Taylor Hardware Co., Cleveland, O.: We congratulate you on the splendid appearance of your Association number. It was happily conceived and grandly executed, and will give *Hardware* a permanent place in the regard of both retailers and jobbers.

Steimer & Moore Mfg. Co., Westfield, Mass.: We congratulate you on your success.

Bissell Carpet Sweeper Co.. New York and Grand Rapids: We beg to tender you our hearty congratulations upon the success of your efforts, in producing such an elegant effect as that shown in your Anniversary Number just issued. It is certainly one of the most effective productions of trade journalism that has yet been brought to our notice. We wish for you and your journal continued success in its unlimited field of work.

Merrill Watson, New York Expanded Metal Co., New York: I take this early opportunity to congratulate you most heartily, on the Hardware Association Number of your paper, which has just been issued, in celebration of the Eighth Anniversary of your publication. The special news topic which you selected was most happy, and on it you have furnished a valuable chapter of lasting worth. It is certainly of great permanent interest to have presented in the concise form which you have done, the splendid work which the various associations have accomplished in the unification of the entire Hardware fraternity. It is a clear exemplification of the just and righteous purposes of all commercial interests. In all that relates to the literary and mechanical production of a trade journal, your issue cannot be excelled.

Heber Wells, New York: Your very attractive issue of the 10th inst. is at hand, and I commend your enterprise in such times as these.

E. Bertram Pike, Pike Mfg. Co., Pike Station, N. H.: Allow us to congratulate you on the very beautiful edition of *Hardware*, issued in commemoration of your eighth an-

Digitized by Google

niversary. Possibly our friends in trade journalism might not accept our opinion as unbiased, should we tell them that we consider your April number the best of the kind we have ever seen, but we can make the assertion in all truth.

Henry C. Minnie, secretary Michigan Hardware Association, Eaton Rapids, Mich.: The last issue of *Hardware* was immense.

James H. Ritter, Biddle Hardware Co., Philadelphia, Pa.: Allow me to tender my congratulations upon the superb number of *Hardware* issued on the 10th. It is certainly one of the finest examples of magazine topography I have ever seen. In fact, I think the illustrations of files and some other detail work, are the best I have ever seen in a trade paper, and you are certainly to be congratulated upon your successful effort. Best wishes for the succeeding prosperity of *Hardware*.

Boston Belting Co., Boston, Mass.: Your special issue was a very attractive number, and we desire to congratulate you upon its size, also upon its excellent appearance.

History of Weights and Measures.

The jewelers of the Middle Ages used in their delicate scales the hard brown seeds of the Moorish carob tree (*Ceratonia siliqua*), and the weight of diamonds is still reckoned by carats, each carat being equal to three and one-sixteenth grains of troy. The earliest attempt to regulate British weights and measures appears to have been suggested by this example. In 1266 it was declared by statute that "an England penny, called a sterling, round and without any dipping, shall weigh thirty-two wheat corns in the midst of the ear; and twenty pence do make an ounce, and one hundred and twelve ounces one pound; and eight pound do make a gallon of wine and eight gallons of wine do make a London bushel, which is an eighth part of a quarter." We have here the basis of the British system of reckoning as it survives to-day—the grain, pennyweight, ounce, pound, gallon, bushel and ton, two hundred and forty silver pence to a pound sterling. The British gallon is still used for both dry and liquid measure.

In 1324 the measures of length were defined by a similar statute providing that "three barleycorns, round and dry, laid end to end," shall make one inch, twelve inches a foot, and three feet a yard.

The thirty-two wheat corns, adopted as the basis of the British system, appear to have weighed twenty-two and a half grains troy; so that the pound of 1266 was equal to 5400 grains troy. This is the old Saxon pound. The pound troy (pound "du roy") is the Roman pound, and was doubtless in use simultaneous with the Saxon pound for hundreds of years, but it is first mentioned in the statutes in 1414 and was ordained as the standard weight for gold and silver in 1527. As twenty-four grains make a pennyweight troy, the new pound contained 5760 grains, exceeding the old weight by three hundred and sixty grains, or three-quarters of an ounce.

The strict pound of twelve ounces was used only in weighing the precious metals, and, with different subdivisions, for the costly drugs and medicines dealt out by apothecaries. For heavy goods, "avoirs du poids," a more liberal measure, was given, like the baker's dozen, and fifteen ounces was called a pound. In the same way twenty-eight pound was called a quarter, and one hundred and twelve pounds a hundredweight, allowance being made for waste or wrappings. The increase of the pennyweight to twenty-four grains in 1527 raised the value of the ounce to four hundred and eighty grains; and accordingly, the pound of commerce, containing fifteen ounces, was raised to 7200 grains. As two hundred and fifty grains of wine was reckoned equal to a cubic inch, the gallon containing eight of these pounds, or 57,600 grains, had a capacity of two hundred and thirty and four-tenths, or in even numbers two hundred and thirty-one cubic inches. This is the wine gallon now in use in the United States. The ale or beer gallon, of two hundred and eighty-two cubic inches, was originally a measure containing eight pounds of wheat at two hundred and four grains to the cubic inch.

The name "avoirdupois" was transferred at a very early date from the heavy goods which it indicated, to the system by which they were weighed. It occurs first in the statutes of 1335 and 1352. The early pound of fifteen ounces of four hundred and fifty grains each—6750 grains—was raised by law, as has been shown, to 7200 grains, making sixteen of the old ounces. In practice, however, the pounds seem to have fallen below the standard to about 7000 grains, and this weight was finally declared to be a pound avoirdupois, the avoirdupois or sixteenth of the pound, being thus reduced to four hundred and thirty-seven and a half grains.—*China, Glass and Lamps.*

The English Iron Industry of Two and a Quarter Centuries Ago.

In a very quaint and curious volume published in 1673 at the *Star*, next to Serjeant's Inn, in Chancery Lane, London, and entitled "England's Improvement Revived in a Treatisè of All Manners of Husbandry and Trade by Land and Sea," by "John Smith, gent.," I find the following interesting observations on the then consumption of charcoal in the iron trade of Sussex, which had at that time a larger number of forges than any county of England:

Much it is to be lamented that the Devastation of woods threatens a grievous weakening to this Kingdom; such a pestilent heat, issueth out of the many forges and furnaces for the making of Iron as hath Devoured many famous woods, and by credible Report there hath been lately in *Sussex* above 130 Hammers and Furnaces for Iron, the hammers and furnaces spending each of them, in every 24 hours, three or 4 loade of charcole more or less, which in a yeare, amounteth unto an infinite quantitie, but because for lack of Water in the summer to blow their Bellowes, all of them cannot work the whole year, we cannot give an account so exactly, yet a probable Estimate we may make how many load of Coale, all the said Hammers and Furnaces may expend in one Yeare; and to that end we shall suppose that one time with another they may all work two-third parts of the year, which is 243 dayes 8 howrs: Each day containing 24 hours, or day and Night; and because all Hammers and Furnaces spend not a like quantity of Coale, we shall therefore take or compute the least or smallest number for all, which is 3 loade of Coale in 24 hours for each furnace and Hammer: Then there is spent in the 243 Dayes 8 hours 1,460 Load by one furnace and Hammer, which amounts unto for the 130 Hammers and Furnaces 94,900 Load in one yeare; Now if there were so many loade spent in one County, it is an unknown quantity that hath been spent throughout England. —*Iron and Coal Trades Review.*

Miller, Sloss & Scott announce that on and after April 23d, their New York office address will be rooms Nos. 115-119 Gerken Building, corner Chambers Street and West Broadway.

The total forest area of the United States is estimated at round 495,000,000 acres, or twenty-six per cent. of total area. Alaska and Indian reservations not included.

Temper largely determines a man's possibility for success in life as well as a sword blade's utility.—*Exchange.*

RECENT TRADE PUBLICATIONS.

The Estate of P. D. Beckwith, Dowagiac, Mich., have issued for the benefit of the Hardware and stove trade two handsome catalogues, one of which is labeled the "Round Oak Furnace," and the other "All About Round Oak Steel Ranges." The motto on the first is that "the Round Oak furnace is just as good a furnace as the Round Oak is a stove;" and the motto upon the other is that "the words Round Oak on a stove, furnace or range mean standard of America." Both of these publications are thoroughly illustrated, showing these articles in their various shapes and sizes, etc. In a note of introduction to the publication first named, the manufacturers say: "In every heating apparatus there must exist a nice proportion of its various parts. The grate surface must be neither too small nor too large for the heating surface. The combustion chamber should be large enough to allow the thorough admixture of the products of combustion, as such an admixture results in a highly inflammable gas, which is instantly ignited, producing intense heat, instead of passing out of the smoke flue unconsumed, and thus wasting a large percentage of the most valuable part of the fuel. Further, said apparatus should be provided with heating surface sufficient to absorb the greatest possible amount of heat from the fuel, allowing only such a quantity to escape as will be sufficient to warm up the chimney flue, so as to produce the requisite draft through the apparatus. After the most careful and comprehensive tests, coupled with years of experience in building heaters, we boldly assert that we have in the Round Oak Furnace a heater which combines all of the good points just enumerated, and our success in this line proves that our furnace occupies a position unique among furnaces, such as the Round Oak Stove holds among stoves—the first place." In reference to the Round Oak Steel Ranges the following points are made: "The ability of the Beckwith Estate to produce the highest class of stove construction has never been more conclusively proven than in the new Round Oak Steel Range. It is a marvel of tight fitting, high-class material and ornamentation. Perfect fitting is as essential to a range as to a heating stove. It saves fuel, which in time will pay for the range. It saves labor, a most desirable feature. It holds the fire and saves the range, because there is no leakage of cold air around every cover, door and draft, making it necessary to constantly force the fire. No detail of fitting is neglected. The doors are ground on and fastened with a Round Oak latch; the draft slide is adjusted air-tight; the covers are turned in a lathe and the cover seats are ground out true, preventing the usual leakage of air into the top of the range. The grates are the newest and best, and can be quickly taken out without disturbing the fire-back or front, and no amount of use can prevent easy removal, on account of expansion, a very valuable feature, on which patents have been applied for. The reservoir is extra large (twelve gallons), and can be quickly heated with a little fire. Particular attention has been given to insulating the oven, and the most perfect work is guaranteed with much less than the usual amount of fuel. The ornamentation is massive and handsome, and so designed as to insure cleanliness and durability."

The Warner Elevator Mfg. Co., Cincinnati, Ohio, have spared neither pains nor money in the preparation of a very attractive catalogue of their High-Grade Elevators covering electric, hydraulic, steam, gas engine and hand power, used for both passengers and freight. This catalogue is finely printed upon heavy paper, showing the various styles of elevator in an attractive manner, with complete descriptions opposite each illustration. This company was incorporated in 1887 as the successor to the old firm of Warren Warner, whose name has been associated with the manufacturing industries of Cincinnati since 1835. In regard to the company and its successor in this line, the catalogue says: "In 1860 Mr. Warner commenced the exclusive manufacture of elevators and hoisting machinery. He built in 1865 the first hydraulic elevator constructed in America, and after building the machine it consumed several months of hard work and persuasion to obtain water from the street mains to try the invention. Cincinnati is, therefore, the American home of the hydraulic elevator. The great number of hydraulic elevators now in use in the United States stands as evidence of the success of his invention, while the growth of our business is evidence of the success we have attained in this line of manufacture, and we can justly claim to be one of the largest exclusive Elevator Companies in the West. Our plant is located on a three-acre tract of ground, on one of the widest streets in Cincinnati. Our large and commodious factory is equipped with the latest improved machinery designed especially for the construction of elevators. All the directors, and most of the executive force of the present company, were engaged with the original proprietor and his successors, some commencing as apprentice boys, and, by their steady application to business, their mechanical skill and genius, are now commanding the different branches of our establishment. This, together with our large force of thoroughly drilled, skilled mechanics, our valuable patents and our continued energy and ambition to keep up with the demand of the times, enables us to turn out our Warner Standard Safety Elevators as cheap as any other first-class elevators on the market."

The Whitman & Barnes Mfg. Co., Akron, Ohio, have published an attractive little catalogue of their Rubber Vehicle Tires, showing the parts in full, with descriptions thereof, and prices annexed. This also shows their Rubber Pad Horse Shoe and the Gibbs Rubber Cushion Horse Shoe. In a note to the trade the manufacturers say: "Parts: Rubber. This consists of a base or cushion applied under tension and a tread or wearing part applied under compression, the tread being capable of renewal when worn down to the channel, without expense of renewing the base. We manufacture our own rubber, of a quality which gives very much greater lasting and wearing power than is true of any other compound ever used. Cement. To insure the best results we use special cement in cementing the base to the channel and the tread to the base. Channel. A channel of careful design, correct proportion, proper material, skilfully made, tried and found best in service. Compression. By applying the tire in two parts, that is, by first applying the base to the channel and then applying the tread portion to the base, cementing the two together (bringing two rubber surfaces in contact), it is possible to use double the degree of compression in the tread than is possible with any other method, thereby insuring greater resistance to puncture and cuts and prolonging the life and wearing qualities of the tire. Wire. A wire with the minimum of stretch, accurate to gauge, of high tensile strength and proper carbon, selected after exhaustive tests. The peculiar construction of this tire permits the use of only one wire, an enormous advantage over any two-wire system

Digitized by Google

when it is considered that the additional and unnecessary wire cuts away a considerable amount of rubber from the vital or bottom portion of the tire. The 'Easy' tire does not become loose and drop off in service, but is retained on the wheel until worn out."

The Storm Mfg. Co., foot of Centre Street, Newark, N. J., have published a circular describing and illustrating the Paragon Self-Retaining Dumb Waiters and Hand Elevators that were formerly made by the F. S. Hutchinson Co., of New York City, but are now manufactured solely by the Storm Mfg. Co. In regard to this purchase and these goods, they say: "Having purchased from F. S. Hutchinson Co. their dumb waiter and elevator business, we are now the sole makers of Paragon Dumb Waiters and hand power elevators. We have always considered the Paragon the best of its class, and are pleased to add it to our large line of machines. The Paragon is so constructed that it will hold the car stationary at any point, without use of brake or clamp rope. It works easily and with perfect safety, for the moment the operator ceases pulling the hand rope, either raising or lowering, the clutch will hold the car in its place. We are also the sole manufacturers of the well-known New York Safety and Manhattan Dumb Waiters, and Humphrey Hand Elevators, of which many thousands are in use all over the world. Also a full line of carriage and basement or sidewalk elevators, invalid lifts, etc. Freight and passenger, belt power and direct electric elevators a specialty."

The George H. Clowes Mfg. Co., Waterbury, Conn., have issued a large and small catalogue, showing the Calcium King Light for bicycles and carriages, which is illustrated and described in our department of specialties for this issue. These catalogues are handsomely printed in colors, giving testimonials, directions for use, terms, etc. Considerable artistic skill has been shown in the preparation. The lamp itself will also be found illustrated in the article referred to, with some special points in their card on page 34 of this issue. These catalogues will be sent on application.

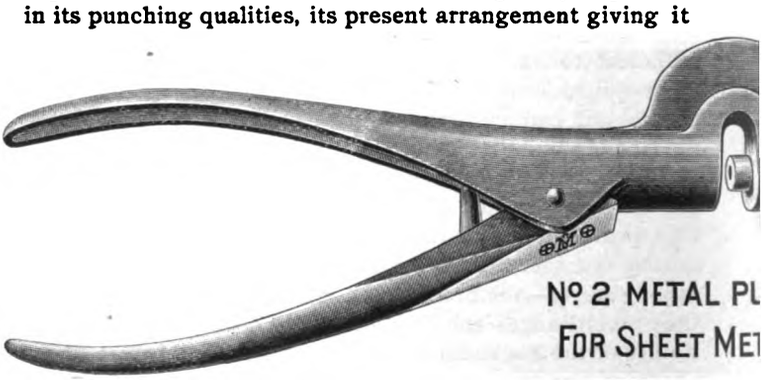
The Troy Nickel Works, Albany, N.Y., are sending their friends a war circular, which, while touching upon the trouble with Spain in an interesting manner, brings out the fact prominently that Alaska, when applied to stove furniture, means "Always Cold."

The National Supply Co., Nos. 5–7 West Lombard Street, Baltimore, Md., have published a price list of furniture casters and light Hardware.

Iron Exports of Different Countries.

"We are now practically in possession of the definite statistics of the exports of iron and steel from the chief countries of the world in the year 1897," says the *Iron and Coal Trades Review*. "The most curious fact about the matter is that the exports of the United Kingdom have increased by almost as much as the exports of Germany have decreased, and that there has been a more limited amount of decrease in the exports of Belgium, coincidentally with a very material increase of output all along the line. The exports from the United States, on the other hand, have increased in a very material degree, alike in raw, semi-manufactured and finished products, while the French import trade has not undergone any very material change. The total exports for the twelve months of the three chief iron and steel exporting countries have been as follows:

	Tons. 1896.	Tons, 1897.	Tons, 1898.
The United Kingdom	3,550,398	3,691,005	140,667
Germany (11 months)	1,400,398	1.250,176	*150,762
Belgium	584,925	576,728	8,197



*Decrease.

"We do not consider that this record is by any means unfavorable for our own country. We not only continue to hold the largest share of the export trade in iron and steel, but we have improved our relative position in 1897 to a larger extent than any other country. There is, moreover, reason to believe—although the facts will not be available for some time to come—that we have made at least as much progress in our output of iron and steel as any other country has made during 1897. Our output of open-hearth steel has been phenomenal, and it would have been considerably larger but for the fact that the engineering dispute cast a shadow over the industrial situation generally. At the same time, it will be noted that the advances made by the United States have been extraordinary, and they attracted all the more attention that they have come from a source whence competition of the kind would not have been deemed possible only a few years ago.

"When we examine the details we find that our own country has made the largest advance in all in the exports of pig and railway iron, as we pointed out some weeks ago; and it is a feature upon which we may reflect with some concern that the advances made by our competitors have been chiefly in finished products. This has been more especially the case with the United States, although, of course, there has also been a considerably increased exportation of Southern pig iron."

Morrill's Metal Punch.

Charles Morrill, No. 35 Warren Street, New York, whose labor-saving specialties are of world-wide reputation, is finding great success this season in an increased distribution of his Improved Metal Punch, an illustration of which is presented herewith. The tool has been greatly improved in its punching qualities, its present arrangement giving it

much additional power, enabling it to punch soft metal with comparative ease from the thinnest up to 14 gauge. It is made in several sizes intended to punch holes varying from ⅛ to 5-16 of an inch in diameter in copper, brass, iron or steel. Punches of this description would seem to be indispensable to tinsmiths and other workers in sheet iron and metals, but would be found of great utility by all mechanics who require reliable, serviceable tools which, used with care and judgment, can be added to their kits with but very little outlay.

The longest commercial distance at which the long-distance telephone is now operated is from Boston to St. Louis, a distance of 1400 miles. This line is more than twice as long as any in Europe.

It is said by philologists that there are thirteen original languages, the Greek, Latin, German, Slavonic, Welsh, Biscayan, Irish, Albanian, Tartarian, Illyrian, Chaucin and Finnic.

It is estimated that the present wealth of the United States exceeds the wealth of the whole world at any period prior to the middle of the eighteenth century.

If you lose a customer, go out and try to find the cause, even if you cannot get the customer back.—*Exchange.*

TOPICS BY THE WAY.

Editor Hardware: The business outlook at present is most encouraging. Not since '92 has the spring trade opened up with so large a volume, and so variegated a demand for staples and specialties. Things in other trade channels, cognate and non-cognate to ours, are not generally satisfactory, probably due to the unusually mild winter, but as regards the Hardware trade there is no room for complaint.

The opening of navigation will further influence activity at all the great lake centers, from Chicago down to Buffalo. If present rates are a criterion, then we shall certainly have a busy navigation season. The war scare, or war possibilities, may place a temporary embargo on certain transactions; at least, such is the attitude now. But there can not be a depression; conditions now developing in the market precluding such a contingency. Country merchants are buying freely in anticipation of big crops at good prices. Farmers are very confident, and the war contingency is only strengthening this feeling.

The bicycle trade is opening brightly. Shipments made thus far are 25 per cent. larger than for the same period last year. Both the $50 and $75 grades are well represented in these shipments. The only bad feature is the surplus of old-style wheels with which many dealers are loaded down, and to move which ruinous concessions are sometimes made. Not until these wheels are well bought up will there be a marked demand for '98 makes.

Dealers report an unusual demand for painters' materials. This augurs well; the incipient demand being so pronounced, only the best of results may be anticipated, the season once being well advanced. There has been a lull in this line for years, and country dealers have, therefore, bought sparingly. Such a casualty is therefore remote this season.

Quite in touch with this line is builders' and plumbers' Hardware and structural iron. The building season opened early, owing to the mild winter. The permits already recorded at Cleveland amount into the thousands. Old contractors hold the erection of new buildings this year will reach the top notch. The outlook in other Western cities, and in the country districts, which would affect the same line, is also very bright.

The windows of up-to-date dealers are now filled with the season's goods. Such displays include everything, from the carpet stretcher to the lawn mower, from the household refrigerator to the "bike." In fact, this is the season for variegated and effective displays, and every dealer ought to be intent upon bringing out the best results. A unique display came to my notice embraced a window transformed into a lawn. Soil had been spread and this had been sown to grass. The grass, which had grown a foot high, had been cut one width of the mower, and it was a clean cut, to be sure. Any prospective mower buyer would have certainly preferred this make to any other. The mower was the background attraction of this improvised lawn; the catcher attached to it was yet filled with the mown grass. A notice in the window guaranteed a limited quantity of the seed from which the "display" grass had been grown, gratis, to any buyer of the mower. The mower was decorated with a banner, inscribed with the text, "Don't be cruel to the grass; it looks so green and fresh."

Here's how an enterprising country dealer words his announcement: "A mild winter is generally productive of a busy fly season, and, according to old farmers, that's the outlook this year. I am prepared for it, and having the welfare of my fellow citizens at heart, I am also prepared for them. My line of fly nets and screens is now complete. Buy early, and avoid the flies."

Here's another: "Don't be a tool in another's hand. Own your tools, be they garden tools or field tools. We shall make it an object to you to own them, if the money problem stands in the way."

A dealer who specializes corrugated iron ware, has his window transformed into an interior aspect of a miniature store room. Sidings, ceilings, roof, in fact every evolution of the line had been employed in the construction. Colored prints, showing the picturesque and artistic effects which may be obtained by using this material were scattered about. Simple as it was, the display was the wonderment of thousands.

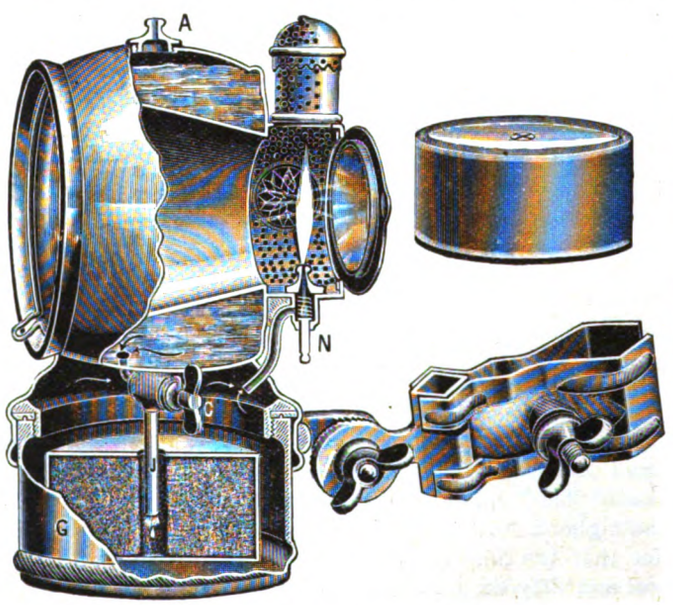
This is an ad., too: "The coming war with Spain will create war prices in powder, ammunition and arms. Having a large stock on hand, we are yet enabled to quote old prices. Remember, the sporting season isn't far off, and the money saved in buying now, may pay your way home in a palace car."

Efforts tending to organization of retail Hardwaremen's associations are being made everywhere. Most cities already have such associations. County associations, embracing the country merchants, is the object of the latest efforts. These are a great desideratum, for they will aid in educating the country trade and acquaint them with the progressive ideas and features of the age, to a degree, for discussion of mutual interests will always lead to good. Besides, the former dead-beat list has grown so large that organization seems the only solution.

Cleveland, O. J. B. RINDFLEISCH.

Experiments as to oil fuel with the torpedo boat *Stiletto* show it to be superior to coal in every way, particularly for small vessels, chief among the advantages being economy, ease of handling, reduced fireroom force, absence of waste, and higher calorific capacity. It was found in actual practice that the *Stiletto* ran twenty-eight miles on one ton of coal and fifty-six miles on one of oil. The oil runs from the dock into the bunkers, and thence to the fire by gravity alone, needing no handling. A distinct advantage lies in the ready removal of the oil burning appliance where oil is unobtainable, permitting the use of coal at any time.—*The Engineer, New York.*

The Berlin Iron Bridge Co., East Berlin, Conn., have just completed at Grand Avenue, New Haven, Conn., a steel bridge 427 feet in length, 52 feet in width, with one roadway and two sidewalks. The approaches on the bridge consist of two deck plate-girders. The draw-span is 200 feet in length and operated by electricity; the same means being employed for lighting the bridge throughout. The bridge is of very heavy construction, the roadway being paved with vitrified brick adapted to the heavy city traffic.



C. Trautman Co. have succeeded to the business, Hardware and manufacturers' supplies, of the late C. Trautman, deceased, at No. 1803 Carson Street, Pittsburg. The business will be continued with but little change from the policy of the late proprietor. H. P. Malick, manager for C. Trautman for the past eight years, continues manager for this company, of which he is a member.

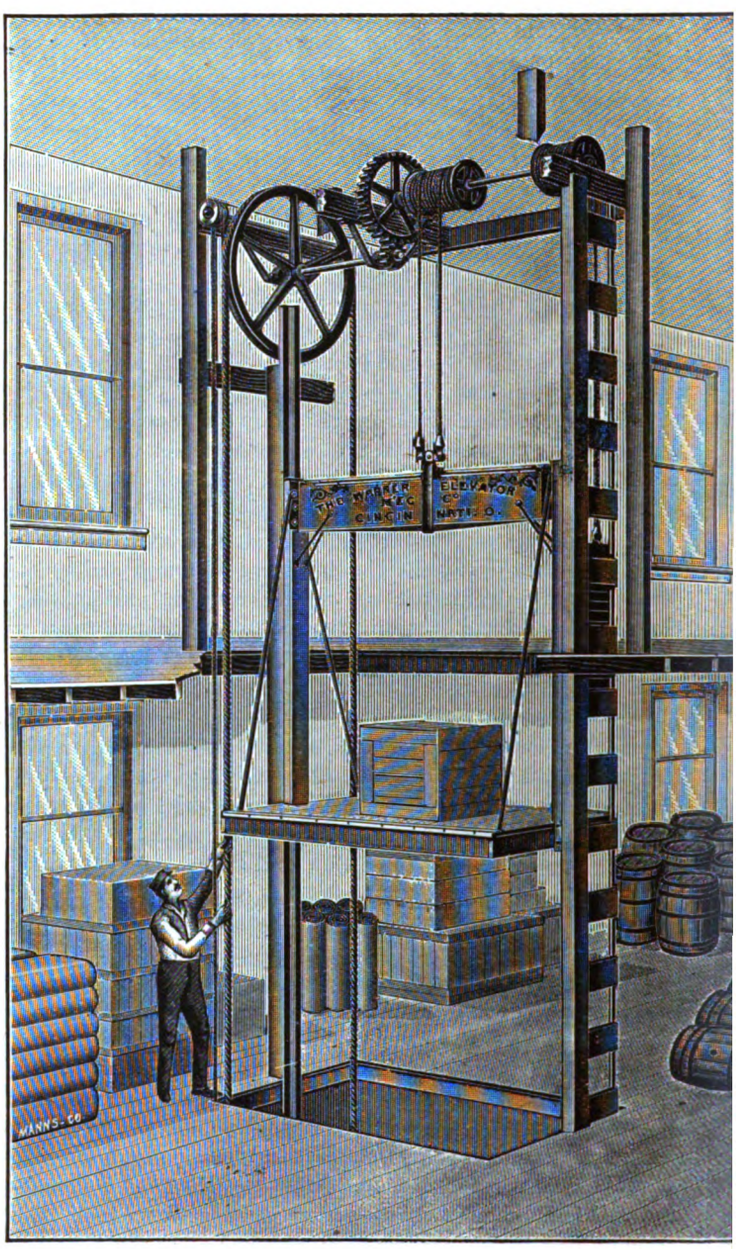
NEW GOODS AND SPECIALTIES.

New Acetylene Lamp.



The Geo. H. Clowes Mfg. Co., Waterbury, Conn., are makers of the very compact and substantial Acetylene Gas Cycle Lamp illustrated herewith. The water reservoir surrounds the central portion of the lamp body, keeping it cool. It has a filling valve at the top and feeds from its bottom into the carbide cup. At the top of the dripping pipe is a valve operated by a thumb nut on the outside of the lamp body. The gas supply pipe runs to a burner at the rear of the lamp, where it is contained in a ventilated box, the rear end of which is hinged as a door and shaped to act as the reflector. This arrangement makes it easy to open the rear of the lamp for cleaning the reflector, etc. In the bracket which supports the gas jet is a spring retained needle point with a thumb piece at the bottom. By pressing upwards on this thumb piece the needle point is raised and forced up through the gas passage in the jet, cleaning it out and expelling the dirt upward clear out of the jet, thus preventing all possibility of the jet becoming clogged. A simple spring safety valve in the upper wall of the gas

tank, allows excessive gas to escape into the open air when the pressure reaches a certain point. The danger of explosion is accordingly eliminated. A double convex lense which is easily removable is fitted to the lamp in the approved fashion with a loose circular wire spring. In speaking of the merits of this lamp, the manufacturers say: "The Calcium King introduces new light for public consideration. It will not turn night into day, yet the fact that its rays penetrate the gloom nearly a mile away shows that it comes near enough to answer the purpose of the midnight rider. Its powerful light is as far in advance of kerosene and naphtha illumination as the average bicycle lamps are ahead of the lantern of Diogenes. In other words, the two rapid strides in lantern-light are from that of the ancient Greek philosopher to the common bicycle lantern—and now to the Calcium King."

Hand Power Elevator.

An easy running Hand Power Elevator is a source of great satisfaction when handling goods from one story to another, where a power machine cannot be employed. Here is a machine that is modern in construction, has all the safety appliances and the cost of same is comparatively low. The platform is entirely of hardwood and is provided with heavy cam safety device. Should the cables break the sharp cams are forced into the hardwood tracks, instantly locking the platform. The powerful screw brake attachment holds the load at any desired point. In order to make this elevator run light and easy, the manufacturers have provided the main bearings with anti-friction roller bearings The cables wind the heavy cast-iron drums

that are lathe chased. The heavy counterbalance counteracts the weight of the platform and winds on an independent drum. This machine is simple in construction and any good mechanic can erect it. This elevator is made by the Warner Elevator Mfg. Co., Cincinnati, Ohio, who will send full particulars on application.

The finished portion of the new Congressional Library at Washington has about forty-four miles of shelving, which will accommodate over two million volumes. The ultimate capacity of the building for books will be upward of four million five hundred thousand volumes, or nearly one hundred miles of shelving.

Review of the Markets.

Hardware: The local trade have felt the prevalence of a less eager demand from buyers, resulting no doubt from too much attention being given to conflicting war news. Still, on comparison with the amount of business done in previous years, some degree of satisfaction is felt that a notable increase in volume of sales is apparent up to the present time.

Wire Nails: The conditions surrounding the market for wire nails have known but little in the way of change since our previous issue. Prices are still considered extremely low by the makers, and the trade awaits with considerable interest the initial announcement expected from the American Steel & Wire Co., which may possibly make the present competition less antagonistic, especially as the demand is not remarkably brisk. Prices are, nominally, carload lots, $1.35, f. o. b. mill, which price would be shaded for a good-sized specification. New York quotations are represented in carload lots on dock, $1.45; smaller lots from store, $1.55@$1.60.

Cut Nails: The market for this staple line shows but little of energy or strength. Prices are low and the demand comparatively light. New York prices are represented by the following: Carload lots on dock, $1.17½@$1.20. Smaller lots from store, $1.30.

Builders' Hardware: Stanley Works, New Britain, Conn., and No. 79 Chambers Street, New York, have recently issued a full and complete discount sheet applying to their catalogue of July, 1895. The changes in discounts are noted as follows:

Hobart B. Ives & Co., New Haven, Conn., under date of March 15th, announce the following changes in discounts and terms on Mortise Door Bolts, Sash Locks and other Hardware shown in Catalogue No. 9, 1897:

Window Ventilating and Mortise Door Bolts.....	Discount,	66⅔%
Sash Locks, Stamped Metal.....	"	66⅔%
" " Cast Goods.....	"	70%
Sash Lifts and Shutter Bars.....	"	55%
Window Stop Adjusters.....	"	40%

Terms, 60 days net, less 2 per cent. for cash in ten days.

Trace Chains, Halters, Cow Ties, etc.: The chain makers of the United States have agreed on the following revised prices on chains as enumerated, said prices to take effect on and after April 15th. The changes in many cases are merely nominal, while in a number of other cases they are more important, having been made necessary from the fact the price lists have for years remained the same, while the constant increase in discounts has worked much hardship in the endeavor to get an average profit, the labor cost being larger in proportion to cost of material. These goods are subject to a discount of 70@70&10 per cent. in accordance with quantity:

Safety Fuse: Hazard Powder Co., No. 46 Cedar Street, New York, quote the following prices for Safety Fuse manufactured by Ensign Bickford & Co. and the Climax Fuse Co. when ordered in full packages:

Common Hemp Fuse	Per 1000 feet,	$2.60
" Cotton Fuse	" "	2.90
Single Taped Fuse	" "	3.50
Double Taped Fuse	" "	4.70
" " Countered Fuse	" "	4.70
Triple Taped Fuse	" "	5.70
White Gutta-Percha Fuse	" "	5.20

These prices are subject to change without notice, and are less the following discounts: 10 and 7½ per cent. f. o. b. Fuse factories in Connecticut; 10 and 2½ per cent. f. o. b. New York City and 2 per cent. for cash in ten days.

Linseed Oil: The Dean Linseed Oil Co., No. 181 Front Street, New York, quote as follows: In lots of less than 5 barrels, 40 cents per gallon; in lots of 5 barrels or more, 39 cents per gallon. The 5-barrel price only applies to deliveries of that quantity at one time. Boiled linseed oil, 2 cents per gallon higher than raw. Calcutta oil, 54 cents per gallon. Above prices are subject to change without notice.

THE CLEVELAND TRADE.

Trade and commerce are likely to suffer severely by increasing tendency to paternal legislation. Congress is expected to determine the amount of money necessary, instead of letting demand create the supply; and the State legislatures make our bargains for us by fixing the price we shall pay for municipal officers, and attempt to determine what the railroads shall charge and the hours that men shall labor.

It may be pleasant to be relieved of responsibility, but it does not tend to develop industry, economy and independence, if we are to be kept from hurts and bruises, as the nurse does the child she watches over.

I can conceive of a social monarchy, but a social democracy is impossible, as it requires coercion in place of consent.

Statesmanship has a new problem if it is to displace the activity that individual interest induces with coercive legislative action. The longing for unearned luxury seeks through legislation what can only be earned by struggle, and that cannot be safely accomplished until we have learned how to use leisure with profit. We owe too much to drudgery to make it safe to dispense with it. We may modify by legislation, but we must not destroy the competitive spirit, unless we are ready to return to barbarism.

The slow elevation that results from the struggle for existence through the survival of the fittest, is not all of evolution. It is the struggle for domination that causes the rapid improvement in economic conditions.

The superior organizer of practical activities is the product of the competitive spirit, and to destroy this will be suicidal.

The indications of war have already affected business in the East, and the West will soon feel its influence. The boom predicted by those who favor war as an economic measure will fail to appear, and the people will then appreciate the magnificent courage of President McKinley in trying to withstand the clamor that threatens such needless injury to the country.

A menace to the business of the country is much more injurious to the poor than it is to the rich, as it interferes with the comfort of daily life of those who depend on steady employment. Prosperity is assured if we could be permitted to attend to our own business. March proved the banner business month since '95, and it would be difficult to imagine a more promising outlook.

The Lockwood-Taylor Hardware Co.

THE PHILADELPHIA TRADE.

The exciting news of the past two weeks has largely diverted attention from business to talk of war and foreign complications. This is hardly to be wondered at, and yet it comes as rather an interruption to business which, during the early spring, was very promising.

It is but natural that trade should halt until the future is positively decided, and opinions differ very largely as to what the result will be if war is finally in effect.

The history of the Civil War is still fresh in our memory, and yet it is more than doubtful whether business conditions of those times will be repeated. That war was fought on land and lasted over four years, engaging large

Digitized by Google

numbers of men who were withdrawn from the ranks of producers at a time when machinery had not reached its present enormous productive capacity. To-day, the productive ability of machinery is so immense, and so capable of indefinite expansion, that it is difficult to see how the withdrawal of even a large number of operatives could, to any material extent, advance prices directly.

Moreover, if the opinions frequently expressed of a short war is to be the case, the decrease in production will be but slight, and the loss of property, while possibly large in the naval line, would not be so general in its character as was the case during the Civil War. On the other hand, the interruption to business will necessarily be great, while the stoppage of our export trade, which has grown most rapidly in the last few years, cannot but be felt.

In view, therefore, of these prospects, it is scarcely surprising that trade should hesitate somewhat, although everything else points strongly towards a good volume of business, while it is still evident that if any goods are being manufactured at unremunerative prices, they must advance as soon as trade improves.

Of course this is all looking at present affairs from the business standpoint only, but we believe the business men of the country are satisfied to leave matters in the hands of President McKinley and his advisers, and are confident that the course taken by him will be one which will be in entire fulfilment of our duty, and which will redound honor to our country.

Philadelphia is proud of its record in other crises of our country. During the Revolutionary War, Philadelphia bore largely the brunt of the conflict, and during those eight years was the chief scene of its operations.

In the Civil War, the patriotism and devotion of Philadelphia were known throughout the country, and we have no doubt that now Philadelphia and her business men can be relied upon to do their full share.

BIDDLE HARDWARE CO.

THE COLUMBUS TRADE.

Trade continues good, despite the war scare, and the greatest trouble now is to get goods. Manufacturers are loth to make up large quantities of goods without having a bona fide order for them. Jobbers do not feel safe in anticipating their full quota until they see what the weather will be, and the demands of the trade. One year may be pleasant a month earlier than another. It may be a wet spring, and the demand for lawn mowers will come in March and April, or it may be dry, and hydrant hose is wanted more than lawn mowers. There is great difference between the orders with the manufacturers and with the jobbers. You buy goods from a manufacturer to be shipped at a certain time, and they expect and insist on you taking them as per contract, but a jobber does not always know whether he has made a sale or not. When he takes an order for future shipment, it is not an uncommon thing to receive a letter of this kind: "Please cancel my order, I find I will not need the goods." Or, "Please cancel my order, as Mr. Cutter quoted me 2½% better price, and I bought the goods from him." All you can do is to grin and bear it.

The recent floods destroyed many miles of fence, consequently the demand for wire and nails is very great, and manufacturers are unable to make prompt shipment. The same is true of poultry netting.

Mr. Editor, you cannot imagine how badly it makes a jobber feel to not be able to ship wire, nails, poultry netting, screen wire and screen doors promptly. It cuts such a big hole in his profits. It is no small matter to have orders for $500 or $600 worth of such goods and know that by handling the goods twice, and have to buy arnica for your porter's back and new suspenders, perhaps, that had you had the goods you would have made possibly $7.92½, but we are all after that $7.92½, and telegraph the manufacturers to hurry along the goods and then telegraph to have them send a tracer, and then perhaps "cuss" the drayman because they are slow in getting the goods out of the car. But you do not know how good it makes you feel to see the wheels go round, everybody get a hustle on, you step quicker, and have more vim. So we guess it is all right.

We are still of the opinion that the business of 1898 will be far ahead of 1897, and thus far in the year we are highly gratified. Prices are about on a par with past years, namely, not stationary. We believe it would be safe to offer a premium to the manufacturer that could maintain prices for sixty days. The premium would not have to be paid, as it is out of the question for manufacturers, where there is open competition, to maintain a price. Prices on Hardware are as uncertain as war news, and that is putting it strong. If Hardwaremen could only trade off their stock for wind just now, they could make a fortune at Washington, because it is a foregone conclusion that some of our congressmen and senators will have to get a fresh supply from some source soon.

SMITH BROS. HARDWARE CO.

THE PITTSBURG TRADE.

It was a great number, Mr. Editor, that last one of *Hardware*, and you certainly are to be congratulated upon its success.

Trade journals are here to stay, especially when so ably conducted as yours. They are capable of great good, and also of great harm. To avoid the harm they may do, the interests of all classes should be carefully conserved. The manufacturer, the jobber and the retailer, each has a right to live and a place to fill in the business world, and the

WHAT WOULD YOU THINK

of a man who bought his c'othes by the pound? If you bought yours that way, wouldn't you know how many yards you were getting to the pound? Sheet packing, like cloth is used by the yard. But it is sold by the pound, and yet how many dealers know how much they are getting to the pound? Do you? Don't forget that low-priced packings **always** weigh heavier than better grades. The very reason they are low priced is because they are loaded down with cheap adulterants, which increase the weight while they lessen the service. **Our packings are made to wear, not to weigh.** They are light to the yard—and they last. We make three grades: **Double Diamond**—something extra—specially smooth finish, strong insertion, fine flexible rubber; **Carbon**—a good article, same strength as Double Diamond, but slightly less flexible and smooth; **Spider**—our cheapest grade, but a strong, useful packing. Carried in thicknesses from 1-32 to ¼ in., 36 in. wide. Rolls weigh about 300 pounds.

trade journals should recognize this fact, and so use its columns as to build up rather than try to destroy any of these interests.

At this writing, it looks as though war is inevitable. If it must come, we hope it will be vigorously pushed to a quick conclusion. Business has not suffered greatly as yet in Pittsburg, although we can notice a hesitancy in it, which may pass when the actual step has been taken.

Logan-Gregg Hardware Co.

Invention of Lamps.

The invention of lamps is ascribed to the Egyptians, says the *World of Progress*. In the British Museum are two colored glazed tiles which were fixed in the center of the ceiling; each has a large knob pierced through the base to receive a cord for suspending a lamp; around the base of each is an inscription stating that it formed part of the decoration of the Temple of Kammuri at Calah Nimrod in the time of Assuru-Abla, 885 B. C. What the lamps were made of cannot now be ascertained, but there is plenty of contemporaneous glass which has been discovered in the neighborhood.

The sacred lamps in Greek temples whose undying flames were perpetually watched by vestas were probably of metal, and the wick formed of asbestos.

In the public baths at Pompeii two lamps were used, each to light two rooms. These lamps were protected by circular convex glasses, fragments of which were found on the spot.

The marvelous accounts by mediævel authors of perpetually burning lamps found in ancient tombs seem too numerous and well tested to be altogether fabulous. When the tomb of Pallas, son of Evander, who is mentioned by Virgil, was discovered about the twelfth century by a countryman digging near Rome, it is said a lighted lamp was still burning over his head, which must have been lighted more than 2,000 years, and might be called eternal.

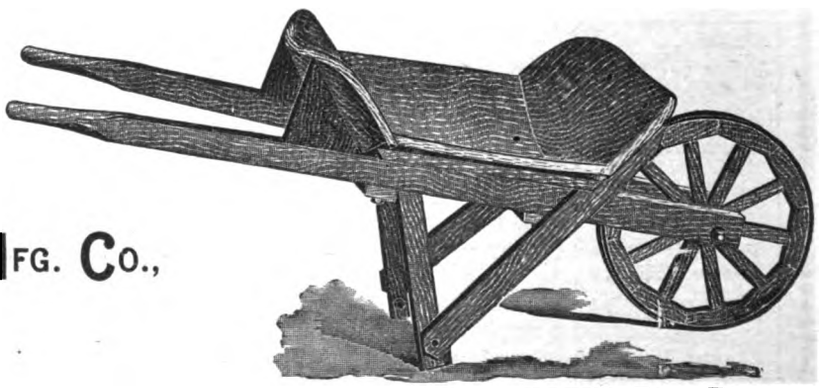
Baptista Porta, in his treatise on Natural Magic, relates that about 1550 a marble sepulchre of the Roman period was discovered in an island near Naples, and on opening the tomb was found a phial containing a burning lamp. This lamp became extinct on breaking the phial and exposing the flame to the open air. It was supposed that this lamp had been concealed before the Christian era, and those who saw it reported that the lamp emitted a splendid flame.

In 1550 a remarkable lamp was found near Atestes, Padua, by a rustic digging, who unearthed a terra-cotta urn containing another urn, in which was a lamp placed between two cylindrical vessels, each of which was full of a very pure liquid, by whose virtue the lamp had been kept shining upward of 1,500 years. This curious lamp was not meant to scare away evil spirits from a tomb, but was an attempt to perpetuate the profound knowledge of Maximus Olybius, who effected this wonder by his extraordinary skill in chemical art.

St. Augustine says a lamp was found in the temple of Venus, exposed always to the open weather, and which could never be extinguished. Ludovicus Fives mentions another lamp, which was found a little before his time, that had continued burning 1,050 years.

It has been estimated that an oak of average size, during the five months it is in leaf every year, sucks up from the earth about 123 tons of water.

Help Wanted.



WANTED—At once, married man about thirty years, to take charge of selling department of Hardware, cutlery, paints and seed store. One with experience in the business and capable of handling salesmen. Must be temperate and wide awake. Address, with references and salary expected, Wideawake, care Hardware, No. 143 Chambers Street, New York.

Situation Wanted.

THOROUGHLY capable salesman and buyer desires position with Eastern house as inside or traveling salesman. Fifteen years' experience in Hardware and mill supplies. A1 references. Moderate salary to start. Address C. J. B., No. 1706 Western Avenue, Cincinnati, Ohio.

Walton's "Angler."

A new "Walton" has a biographical introduction by Richard Le Gallienne, in which the writer rashly assails the belief that Walton in his shop in Fleet Street (two doors west of Chancery Lane), carried on the business of a hosier or haberdasher, "One fact against the haberdasher or 'sempster' theory is that the records of the Haberdashers' Company do not contain the names of Henry or Izaak Walton between 1600 and 1630, whereas it has been discovered that the records of the Ironmongers' Company for 1618 do contain the name of Izaak. Still more conclusive is the fact dwelt upon by Mr. Marston, that in his marriage license with Rachel Floud, dated Dec. 27, 1626, he is described as 'of the Cittie of London, Ironmonger.' Why a man who was a haberdasher should describe himself as an ironmonger in his marriage license is certainly difficult to imagine, except on the unlikely theory that Rachel Floud had a partiality for ironmongers." It is on these grounds that Mr. Le Gallienne decides that Walton "in future must be written down an ironmonger." The *News*, London, points out that Mr. Le Gallienne is evidently not aware that the guild or company to which a citizen happens to belong has long ceased to afford any evidence of his actual occupation. The father of Cowley, the poet, was said on good authority to have been a grocer, but in his will he is described as a "citizen and stationer." It was a sort of distinction which men in those days were proud to claim. Pepys was a freeman of the Clothworkers' Company, and even served the office of master of that guild, but he was certainly never a clothworker in any other sense. In like manner John Hemynge, Shakespeare's brother actor, and Sir Philip Sydney were grocers. Lilly, the astrologer, was a Salter, and Doggett, the comedian, a fishmonger. But all this only meant that they were respectively freemen of those companies. When Herbert published his "History of the Great Livery Companies" about sixty years ago, it was stated that the lists of the freemen and livery of the Mercers' Company did not comprise a solitary mercer.—*New York Times.*

A new and very unique combination tool, comprising in one piece of forged steel, five inches in length, a hammer, tack puller, wrench and screwdriver, is being placed on the market by Jos. H. Seed, No. 12 Centre Street, New York City. Besides being a very handy tool to have around the house, it is a good friend to the bicyclist, and makes the best of openers for cigar boxes.

Notice is Hereby Given

That an agreement dated the 25th day of November, 1889, heretofore entered into between Frederick Siemens, of London, England, and George Hillard Benjamin, now of No. 45 Broadway, New York, affecting certain letters patent of the United States issued to said Frederick Siemens, relating to continuous glass furnaces, has been terminated by notice to take effect July 1st, 1898, and that said George Hillard Benjamin has no authority to enter into any fresh engagements as regards any matters or letters patent described in said agreement until the same shall have been submitted to and approved by Frederick Siemens or his attorneys, the undersigned **CARY & WHITRIDGE,**
Attorneys for Frederick Siemens,

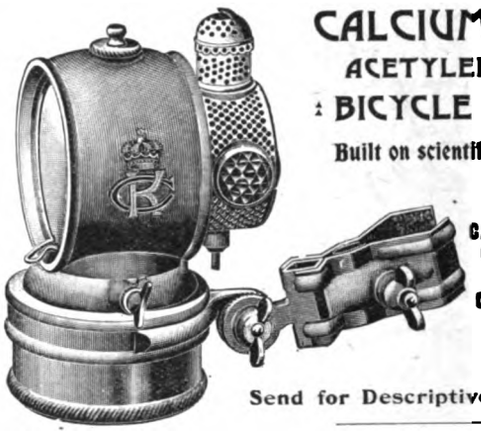
The Hartzell Self-Draining Hose Reel

IT SELLS RAPIDLY.



It is scientifically and mechanically constructed.
It is a nice ornament and a great convenience in spraying and watering a lawn.
The hose is not kinked, twisted, crushed or drawn to a tension, thus avoiding the breaking of either the inner or outer walls of the hose which protects the fabric and prevents it from becoming water soaked, which usually causes the rapid destruction of the hose.
It drains all the water out of the hose, after it has been reeled, and keeps it always in good order, ready for service.
Each section of hose is independent of the others and may be easily detached at the top or bottom.
It sells at sight, because any person who owns a garden hose can readily see its advantages and superiority.

Jobbers are especially solicited to handle our goods to whom lists and prices will be furnished upon application.

DEALERS ask your Jobbers for the HARTZELL SELF-DRAINING HOSE REEL and insist on getting it.

If they will not supply you address us for prices, circulars and lists.

The Hartzell Novelty Works, Alliance, Ohio, U. S. A.

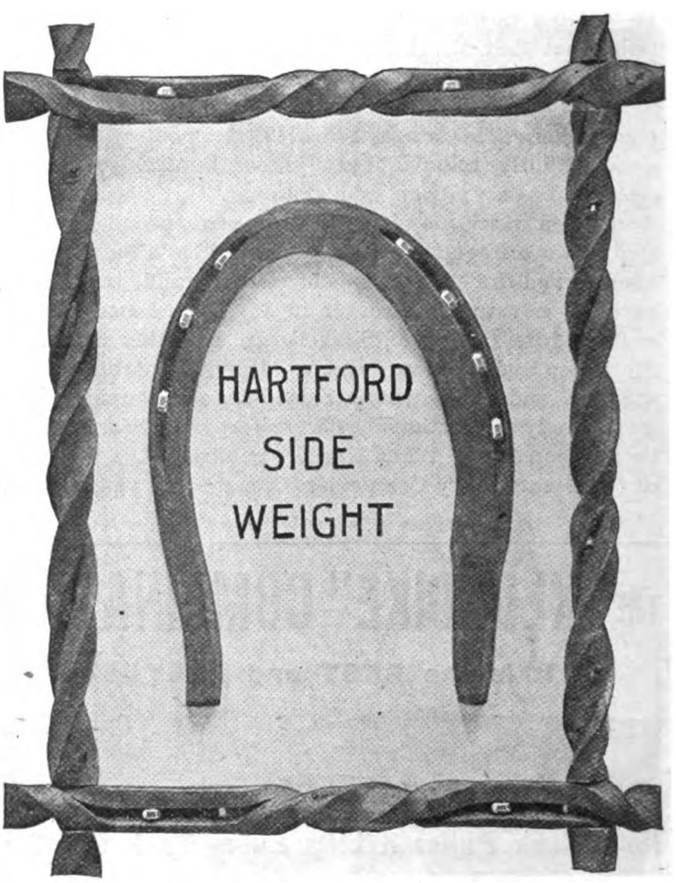
W. W. Pryor & Co., manufacturers of Hardware and house-furnishing specialties, formerly at No. 81 Chambers Street, New York City, have removed into larger and more desirable quarters at No. 124 Chambers Street, where they will carry a more complete line of their well-known tools, and supply with a greater degree of promptness the demands of the trade.



Sawdust is turned into transportable fuel in Germany by a very simple process. It is heated under high pressure until the resinous ingredients become sticky, when it is pressed into bricks. One man, with a two-horse power machine can turn out 9000 bricks a day.

The theatres in Japan have a novel method of pass-out tickets which are positively not transferable. When a person wishes to leave the theatre before the close of the performance, with the intention of returning, he goes to the doorkeeper and holds out his right hand. The doorkeeper then, with a rubber stamp, imprints on the palm the mark of the establishment.

About 10,000 pounds of eiderdown are collected annually in Iceland, 7000 being exported to foreign countries. Formerly the peasants used to receive about $5 a pound for it, but the price has now fallen to half that amount.—*Michigan Tradesman.*

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over are requested to contribute to this page News of new factories or companies, changes, improvements. etc , will be gladly received, and promptly published.

New Companies, Etc.

Birmingham, Ala.—The Southern Bolt Co. has been organized with John M. Caldwell, president; Charles O. Locke, secretary and treasurer; Samuel Randolph, superintendent. The company will manufacture iron bolts, nuts, spikes, rods, etc. The plant will be located at Fourteenth Street and Powell Avenue, on a lot 100x166 feet. The main building will be of steel, 60x150 feet, equipped with the latest and most modern machinery.

Charleston, W. Va.—Jobson Mfg. Co. have been incorporated with an authorized capital of $1,000,000. The company is organized for the purpose of manufacturing all kinds of nuts, bolts and such other articles as may from time to time be selected. The incorporators are J. H. Matheny, J. Z. Barker, William Bragger, J. W. Malcom and W. C. Barker, all of Charleston.

Chicago, Ill.—The American Wire Co. has been incorporated with a capital stock of $24,000,000.

Chicago. Ill.—Lake St. Mfg. Co. has been incorporated by M. D. Jones, E. A. Fordyce, H. F. Wallman, to manufacture Hardware, etc. Capital stock. $10,000.

Chicago, Ill.—Decker Last Hinge Co., capital stock, $1000. Incorporators: George W. Wilbur, Albert H. Trull and Lyman H. Partridge.

Cincinnati, Ohio.—The Davis & Egan Machine Tool Co. have been reorganized under the name of the American Tool Works.

Cleveland, Ohio.—The Johnson Steel Co. has been reorganized, with a capital stock of $14,000,000.

East St. Louis, Ill.—Missouri Wire & Nail Co., capital stock, $10,000. Incorporators: R. M. Scruggs, C. F. Hintze and A. N. Sager.

Howell, Mich.—G. F. Farrar is endeavoring to organize a company for the manufacture of wire fence tools at Windsor.

Lancaster, Pa.—Lancaster Steel Metal Co. has been incorporated with a capital stock of $25,000.

Lorain, Ohio.—The Lorain Steel Co. has been incorporated by Andrew Squire, C. C. Bolton, F. B. Richards, A. M. Robbins and William B. Sanders. Capital stock, $9,000,000, of which $3,000,000 is preferred stock.

New York, N. Y.—The American Brass Mfg. Co. has been incorporated by W. H. Platt and others. Capital stock, $10,000.

Nokomis, Ill.—Spannagel Hardware & Furniture Co. has been incorporated by G. H. Spannagel, William H. Shannon and G. R. Spannagel for mercantile purposes. Capital stock $20,000.

Oakland, Cal.—The American Machinery Co., has been incorporated by Daniel Tweedle, Frank Henneberg, Hubert Keon and A. P. Flood to manufacture and deal in machinery and tools of all kinds. Capital stock, $20,000.

Pittsburg, Pa.—The plant of the Pittsburg Brass Co., at the foot of Locust Street, Allegheny, which went into the hands of a receiver in 1894, will be operated by the Pittsburg Lamp & Brass Co., which has been organized with a capital of $300,000. The new company has been organized with the following officers: Reuben Miller, president; F. G. Wallace, vice-president; C. Bermingham, superintendent; directors, E. H. Kramer, J. P. McKinney, E. A. Kitzmiller, C. Bermingham, F. G. Wallace.

St. Louis, Mo.—The A. J. Jordan Cutlery Co. has been incorporated with a capital stock of $100,000.

St. Louis, Mo.—Hynson Tool & Supply Co., capital stock, $2500. Incorporators: L. D. Hynson, Walter M. Davis and Montrose P. Hynson.

Toronto, Ont.—The A. D. Fisher Co. Ltd., has been incorporated to manufacture skates, cutlery, sporting goods and accessories, with a total capital stock of $40,000.

Williamsport, Pa.—The Valley Iron Works has been incorporated with a capital stock of $10,000.

Changes and Improvements.

Harriman, Tenn.—The Harriman Tack Co.'s factory has been purchased by W. T. Henry.

Zanesville, Ohio.—The Collins Tool Works are moving their plant to South Zanesville.

Recent Fires.

Clayville, N. Y.—The entire plant of the Oneida County Farm & Tool Co., for many years known as the S. A. Millard Agricultural Works, has been destroyed by fire. The plant comprised ten buildings, all of which, with the exception of the engine and boiler house, were of wood. The loss is estimated to be between $80,000 and $90,000, while the insurance is $41,500.

Pekin, Ill.—Fire has caused damage to the amount of $5000 at the works of the Pekin Plow Co.

Taunton, Mass.—Anthony & Cushman Tack Co., factory damaged by fire at a loss of $10,000; fully insured.

Miscellaneous.

Indianapolis, Ind.—The Deere Plow Co., of Moline, Ill., will establish a large branch house in this city and excavations for a building are now being made on Senate Avenue, just below Kentucky. The building will be 120 by 70 feet, constructed of brick, and will be five stories high. It will have a handsome front of pressed brick and will cost about $26,000.

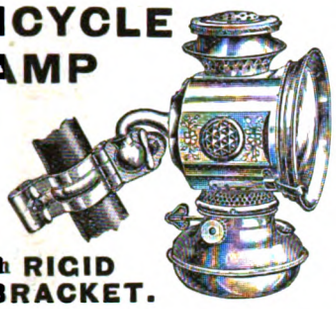
Lebanon, Pa.—The Pennsylvania Bolt & Nut Works, of this city, have completed arrangements for building a large extension to their plant here, and will also make additions to their manufacturing facilities in the factory department. The improvements will entail an outlay of $50,000.

Reading, Pa.—The Reading Hardware Co. have elected the following officers: President, Matthew Harbster; vice-president, William M. Griscom ; treasurer, Henry C. England; secretary, John C. Harbster; manager of sales department, G. M. Jacobi. The directors are: M. Harbster, William M. Griscom, Henry C. England, John G. Mohn, Jacob B. Fricker, Isaac G. Treat and John E. Harbster.

Youngstown, Ohio.—By combining the interests of the New Castle Wire Nail Co. with those of the Shenango Valley Steel Co., both of New Castle, the consolidated company is enabled to make its diversified finished product from the ore up. The company will have control of three blast furnaces having a daily output of 900 gross tons.

There are seventeen metals more valuable than gold, viz.: Iridium, valued at £60 per pound troy; gallium, £75; rhodium, £85; osmium, £120; ruthenium, £200; palladium, about £216: barium, £280; didymium, £500; cerium, £525; yttrium, £630; strontium, £670; calcium, £700; glucinum, £820; lithium, £1080; zirconium, £1115; rubidium, £1400; vanadium, £1725.

The income of the Emperor of Russia for one day is £5000; Sultan of Turkey, £3600: Emperor of Austria, £1000; German Emperor, £1600; King of Italy, £1300; Queen Victoria, £1300; King of Belgium, £1300; President of France, £1000; President of the United States, £25.



The number of mountain railways in the world in 1895 was as follows: Switzerland, 17; Germany, 14; Austria, 10; Italy, 4; France, 4; while four were distributed between Spain, Portugal, Greece and Madeira. In Asia there were three, one in Sumatra, one in Japan and one in Syria. In North America there were three, in Central America one, and in South America four.

It is calculated that a fluent speaker utters between 7000 and 7500 words in the course of an hour's uninterrupted speaking; many orators, of more than usually rapid utterance, will reach 8000, and even 9000. But 125 words a minute, or 7500 an hour, is a fair average.

Great Barrington, Mass.—John Brewer, Hardware, bicycles, etc., damaged by fire at a loss of $4000; covered by insurance.

Hamburg, Pa. — The Wilhelm Bicycle Works, plant damaged by fire at a loss of $70,000; insured for $42,000.

Pittsburg, Pa.—Tyler & Elliott, bicycle dealers, store destroyed by fire.

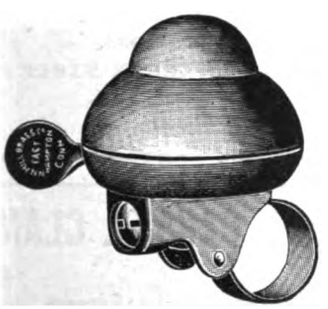
Miscellaneous.

Chicago, Ill.—National Tire Co. has certified to an increase in board of directors from three to seven.

Hagerstown, Md.—The Crawford Bicycle Works are erecting another addition to their plant, and it is reported that the manufacture of projectiles will be introduced at the instance of the national government.

Station Announcers on the Seine.

The Seine at Paris is navigated by a considerable fleet of cheap steamers, affording an excellent means of transportation along the water front, the fares being low and the time being fairly quick. For some weeks past a new system of announcing the stations at which the boats stop has been adopted. All travelers know the mistakes which are liable to occur owing to the carelessness with which the stops are called out. The system which is used is simple in the extreme. It consists of a box, at the top of which are the words "Next Station." Below this, secured at the middle of the box, are a number of signs, one for each of the stations at which the boats call. After the boat has left the station the ticket taker pushes a button which releases the top edge of one of these signs. The sign is secured by staples at the middle of the box, so that it folds down like the leaves of a book, exposing the name of the next station. The movements are very simple, and the apparatus is not liable to get out of order, owing to the fewness of the parts.—*Scientific American.*



A writer in the *Ladies' Home Journal* says that one may meet as well-dressed women in Siberia as are to be found in any European city. The social forms that exist in the large cities of Russia are observed in Siberia, and the fashionable people of that vast province enjoy life to the full.—*Michigan Tradesman.*

The average girl knows enough about photography to retouch her negative when she says "no."—*Exchange.*

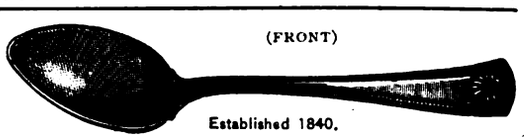
The Very Latest.
Patented Aug. 24, '97.



The "Eclipse Cleanable" Refrigerator is original.

It is the only removable ice chamber refrigerator having a removable flue through which pure cold dry air is introduced in the bottom of the provision room, getting under and between the provisions, and forcing the warm moist air and odors upwards, and creating a positive current or circulation. All other makes are imitations of the first crude removable tank refrigerator introduced years ago, and have an ice box set in top, from which cold, heavy air falls by gravity and forces downward the objectionable matters. THE ECLIPSE HAS THE LARGEST ICE CAPACITY.
HAS ALL THE CLEANABLE FEATURES OF OTHER MAKES.
HAS MORE TALKING POINTS THAN ANY OTHERS.

$1,250.00 for ten Oldest Bicycles in America.

Ten New HOWARD CHAINLESS To be given in exchange.

OUR Advertising Department proposes to give ten latest Improved Howard Chainless Bicycles, valued at One Hundred and Twenty-five Dollars each, ($1,250.00) in even exchange for an equal number of the oldest bicycles of any make, in good order and condition for use. Awards to be decided from applications sent in before the 4th of July.

All You Have to Do is to send the information to us in a sealed Envelope:—1. Your name, residence and postoffice address. 2, The name, factory number and description of your bicycle. 3. How long you have owned it and how long you have ridden it. 4. If you want our illustrated catalogue send two 2-cent stamps.

If you own an old bicycle you merely send the required information. It may bring to your door the best bicycle in the world in exchange for your old one. This is no scheme to secure a payment, subscription, or admittance for a book agent. We want the names of people who can use good bicycles. We make HOWARD CHAINLESS BICYCLES exclusively and want to sell one or two in every town this season. Have been making chainless bicycles for years. If no agent in your town handles the Howard Chainless write us at once. Address

Advertising Department **HOWARD CHAINLESS CYCLE CO.,** 760 Summer Ave., Newark, N. J.

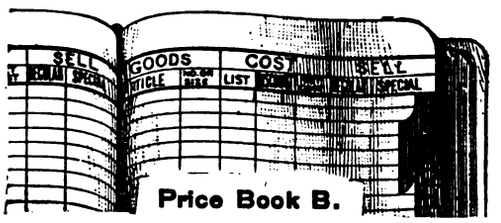
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



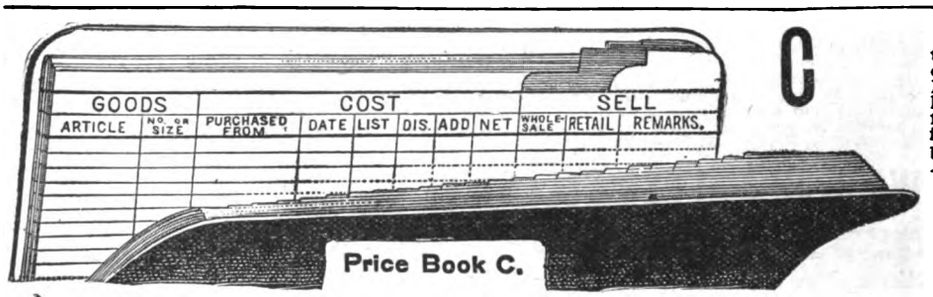
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages, - - $1.00 **A 2**, 400 pages, - - $1.50
A F, 200 pages with flap, 1.25 **A F 2**, 400 pages with flap, 1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

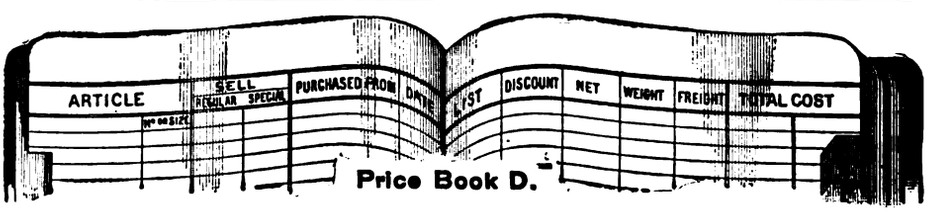
B, 200 pages, - - $1.00 **B 2**, 400 pages, - - $1.50
B F, 200 pages with flap, 1.25 **B F 2**, 400 pages with flap, 1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¼ inches.***

FOUR EDITIONS:



C, 200 pages, - - - $1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - - 1.50
C F 2, 400 pages with flap, - 1.75

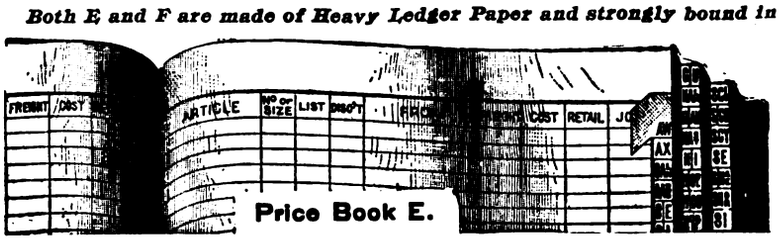
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages, - - - $2.00
D F, 200 pages with flap, - 2.50
D 2, 400 pages, - - - 3.00
D F 2, 400 pages with flap, 3.50

D

Price Book D.



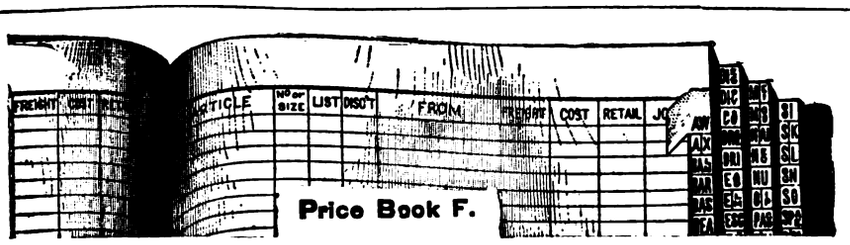
MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CHI For Iron, turn to IRO
" Parers, Apple " PAR " Cutlery, " CUT " Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

E



Price Book E.

AD	GU	SCL

To Bicycle Riders.

WE MAKE OUR TUBE
OF FIFTY CARBON STEEL

Because a Tube like this of our Is just as strong as a Tube like this of

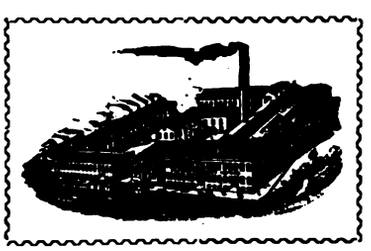
.50% CARBON STEEL

.25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long

and TWENTY-FIVE CARBON Steel will last only so long

NOTE THE FULL IMPORT OF THE PARALLEL LINES.



The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory corroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

"With Gratifying Results"

New York Belting & Packing Co., Ltd., New York. [*Belting, Garden Hose, Water Hose, Steam Hose, Packing and Rubber Specialties*]: We have been carrying quite a prominent advertisement in Hardware with gratifying results. That we expect to continue this advertisement is the best evidence we can give of our regard for it as an excellent medium.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

ALASKA SOLDERING IRON HANDLE

. . . ALWAYS COLD.

Sold by all Jobbers in Hardware or Plumbing.

Made only by . . . .

TROY NICKEL WORKS,
ALBANY, N. Y.

FITS ANY IRON.
Want to see one? Send us 25c. We will mail you one.

"READ IT FROM THE FIRST ISSUE."

C. E. Neale, Worcester, Mass.: Please find enclosed the cash for the coming year's subscription to HARDWARE. I have read it from the first issue, and intend to keep right along reading it, and wish you success.

"BETTER THAN ANY OTHER TRADE PAPER."

S. L. Allen & Co., Philadelphia, Pa. [*Agricultural Implements, etc.*]: We have found results of our advertising with you better than in any other trade paper.

"'HARDWARE' IS READ BY THE DEALERS."

Forehand Arms Co., Worcester, Mass. [*Arms*]: In the numerous inquiries received daily, reference is made to HARDWARE as often as to any other publication, which shows that HARDWARE is read by the dealers.

"USEFUL AS AN ADVERTISING MEDIUM."

Smith & Egge Mfg. Co., Bridgeport, Conn. [*Traps, Locks, Chains, Pulleys, etc.*]: We have found your paper very useful as an advertising medium.

Digitized by Google

THE POPULARITY

Of our premium list, evidenced by the eagerness with which new subscribers are availing themselves of the opportunities offered, has compelled us to extend the time limit. We will therefore continue this offer until further notice to **NEW 1898 SUBSCRIBERS.**

ALL THE NEWS. **HARDWARE** HARDWARE EXCLUSIVELY.

Needs no introduction to the Hardwareman. He already knows what a valuable adjunct to his business this semi-monthly visitor is, with its reliable "Prices Current," its "Market Reviews" and its general news of interest to the Hardware trade.

FOR $1.00 We will send "**HARDWARE**" for one year, and ANY **ONE** of the following articles:

A dating stamp that will last till 1902, with 12 special entries for marking letters and bills.

Huebsch's Year Book.

A 365-page Cloth Bound Diary—one page for each day in the year—4½x9 inches, bound in flexible cloth covers. Invaluable to merchants, manufacturers, bookkeepers, clerks, etc.

Indexed Coupon Books

representing one hundred dollars—to enable you to put your business on a cash basis—do away with pass books——to prevent bookkeeping errors. No disputes over accounts—no delinquent debtors or bad accounts. Used throughout the country now instead of credit system.

A numbering stamp, which will number from 1 to 999,999. You can number every article in your store with this stamp. It is indispensable to the careful retailer.

FOR $1.25 We will send "**HARDWARE**" for one year and your choice of the following six premiums:

1. A Perfect Fountain Pen . . . . with 14 kt. gold pen and a filler, warranted to give the most satisfactory results. Made by one of the oldest fountain pen houses in America, and fully guaranteed. . .

2. A Silver Mounted Stationery Set. Seal, letter opener, and paper knife with pearl blade—that gives an air of elegance to your desk. . . .

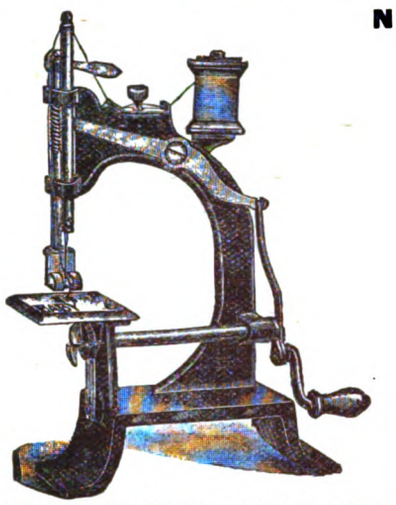
3. Huebsch's Year Book . . . . (large size), 6x9 inches, bound in flexible cloth, made to last. IT IS YOUR BUSINESS MEMORY, and will not fail you.

4. If You Have a Good Name . . . you may like to see it in your window. We send you ten of the best white enamel 4-inch letters, with a half pound of best cement and full instructions for putting up. If 4-inch letters are too large, send for twenty 2-inch letters. If you require more than the quantities specified, we will send you extra letters; 4-inch at 6 cents each, and 2-inch at 3 cents each. . . . . .

5. Half Dozen Photographs. . . . . Send us any photograph, with your name and address written plainly on the back, and we will return it to you together with six medallion copies of the original, mounted on celluloid, with a wire stand. We guarantee the medallions to be as good as the original. . . . . .

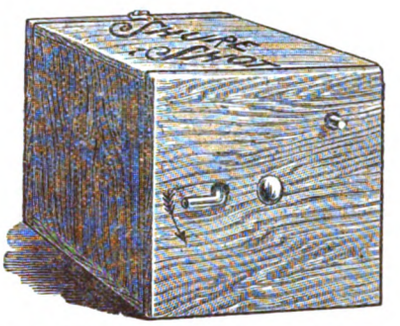
6. Bushnell's Price Book . . . bound in seal morocco, 4¾x6⅞ inches, 200 pages, adapted to the use of the traveling man, the home salesman and the office. Neatly indexed, red edged, ruled faint, printed headings. This practical Price Book is in almost universal use. . . . . .

Address all communications to



HARDWARE PUBLISHING CO., No. 143 CHAMBERS STREET, NEW YORK CITY.

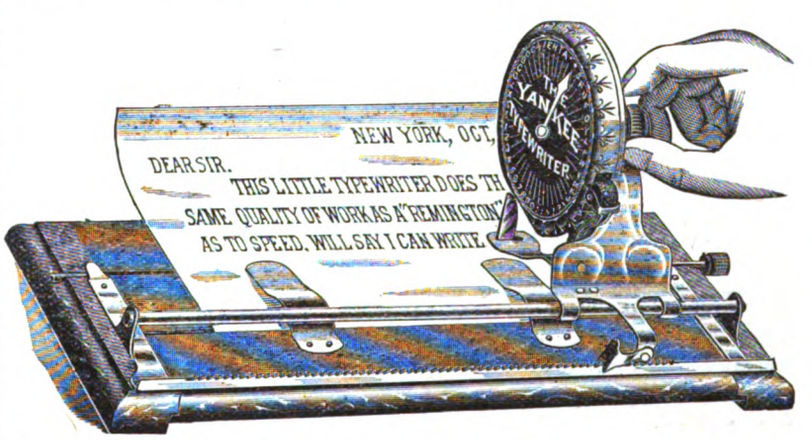
Digitized by Google



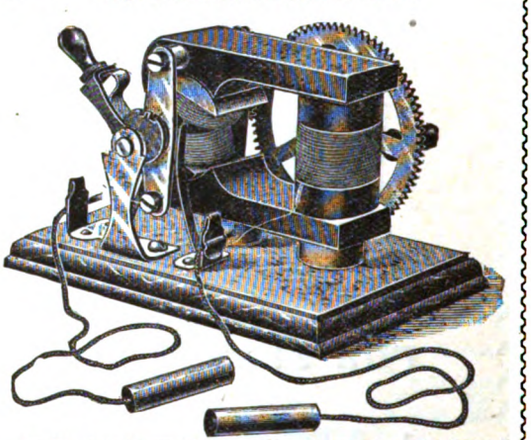
You Live

In hopes of always securing the greatest "helps" to your business. "*HARDWARE*" is a "help." It helps the dealer to buy economically, and helps the manufacturer to sell extensively. "*HARDWARE*" for one year, and any one of the following attractive premiums sent post paid for ***$1.50.*** This offer applies to

NEW 1898 SUBSCRIBERS ONLY.



A perfect Sewing Machine. "The Baby" It uses regular Wilcox & Gibbs needles and ordinary machine thread. It is strong and simple; won't get out of order; can be clamped on any table, and is so constructed as to make it almost impossible for the smallest child to injure itself with the needle.



Just think- a complete Camera and an outfit to print, develop and mount. Makes a picture 2½x2½ inches, and its work compares favorably with higher-priced ones of which it possesses the best features, including an instantaneous shutter, adjustable to time exposures if desired, and operated by a lever and button just as your $50 outfit is.

An Open-Faced Nickel-Plated Watch; fully guaranteed for a year. Winds and sets in back of case, and will stand rough usage, and keeps as good time as an expensive watch.

The Yankee Typewriter.—Will write 15 to 20 words a minute; will take any size paper, from postal card to foolscap size. Has automatic carriage and paper feed. Mounted on highly finished hardwood base, and packed in a strong wooden case.

An Electric Magnetic Machine.—A wonder of mechanical perfection. Supersedes the old-style medical batteries, and gives a stronger current without the expense of renewals It has a current regulator which can be adjusted to a nervous child or to overpower the strongest man.

OF COURSE, YOU TAKE A MAGAZINE,

Probably one in the subjoined list, if it is not, let us know, and we'll put it there, The first column shows the price you would have to pay for the magazine alone. The second column indicates the price at which we will send you "HARDWARE" and the magazine for a year. In many cases you will find the combined price is no more than the single one, and you know you can't afford to do without "HARDWARE." This offer applies to **New 1898 Subscribers only.**

OLD SUBSCRIBERS AND NEW

May take advantage of the following liberal offers:

1. **"American Hardware Trades Reference Book,"** published by Thomas Publishing Co., with "HARDWARE" for one year, will be sent on receipt of **$1.50.** Those who are already paid subscribers to "HARDWARE" will receive the book, on sending **50c.** This book is a complete directory of the manufacturers of Hardware in the United States. Each manufacturer is classified under the name of every article he makes. The financial rating is given in each case; 8000 Names; 25,000 Headings.

2. **"Ladd's Discount Book,"** with "HARDWARE" for one year, for **$3.00** Single Index, and **$4.00** Double Index. Present subscribers will be credited for one year in advance. If you have to calculate discount this comprehensive work will save many times its price in time, trouble and mental strain. Its comprehensive character may be realized from the fact that it contains nearly 200 pages of positively accurate tables or more than 120,000 computations giving at a glance the net of any sum at all discounts from 1 per cent. to 95 per cent. together with a great range of combinations.

3. **"American Hardware Store,"** with "HARDWARE" for one year, for **$3.00.** The "AMERICAN HARDWARE STORE," containing 450 pages and 500 illustrations, is an exhaustive treatise on the most approved methods used by the successful merchants of this country to arrange, display and sell Hardware. It is edited by R. R. Williams, editor of the *Iron Age*, and published by the David Williams Co., of this city, at $3.00. By a special arrangement, we are enabled to combine "HARDWARE" with the book at the same price. Present subscribers will be credited for a year, in advance of their present subscription.

Fill out Order, and address as below:

ORDER BLANK.

HARDWARE PUBLISHING CO.,

THE "NEW EASY" LAWN SWING.

☞ Most perfect and easily operated Lawn Swing on the market. Made of the very best material, attractively finished, automatic in operation. The backs of the chairs are adjustable so they can be set up straight or inclined at any angle you want it. The platform that the feet rest on is also adjustable.

Dimensions.

Total ground space occupied,	10 ft. x 4 ft.
Length of foot rest	2 ft. 10 in.
Width of foot rest,	1 ft 6 in.
Height of back above seat,	2 ft. 8 in.
Length of the four large uprights,	10 ft. each.

THE "NEW EASY" is a good, strong and substantial swing, can be taken apart and moved in a moment's notice; arranged to fold up like a Jack-knife and put away for the winter, occupying but very little space. Its adjustable features make it a combined swing and hammock, especially adapted for the Park, Lawn or Veranda. Nicely painted and attractively finished.

Price to the Trade, $3.75 each. We are Centrally Located ... and Get the Best Freight Rates....

IS A GOOD ONE.

Morgan & Wright, Chicago Ill. [*Bicycle Tires*]: There can be no question about the advisability of using the Hardware trade as a means of disposing of bicycles and bicycle parts, and as to the efficiency of HARDWARE, we can only say what we would say in reply to an inquiry from any other publisher, i, e., we have no direct means of knowing whether our "ads" do us good or not. If we insert an "ad," it is on our judgment that the publication is a good one.

Digitized by Google

A GOOD THING.

IT'S IN THE TEETH.

The Patent "REFORM" Curry Comb is composed of three shallow, oval trays, with corrugated edges. The parts are struck up from a fine grade of cold rolled steel, heavily tinned and bronze lacquered, firmly riveted together and warranted not to rust. The outer dimensions are 6½x4¼ inches and by reason of the large cleaning surface and peculiar arrangement of teeth, the comb will do its work with a large saving of time and labor, cleaning with equal thoroughness both long and short coats. There are no places to accumulate hair and it will not tear or injure the brush, the comb being quickly freed from accumulation by giving its face a gentle tap.

IRON ROOF

FOR SALE.

Width of building, 155 feet out to out, divided into a center span 66 feet, with a wing on each side 43 feet 6 inches; total length of the building 350 feet. This building is designed with brick sides and gable walls, with Iron Roof Trusses and Iron Supporting Columns; originally built for an Iron Foundry, but owing to the failure of the purchaser is now offered for sale at a bargain. Is admirably adapted for a Foundry for light or heavy castings, Machine Shop, Car Barn, or for any other general manufacturing purposes. We guarantee the iron work as good as new, building never having been used.

"Bright and Newsy."

Biddle Hardware Co., Philadelphia, Pa. [*General Hardware and Bicycles*]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

While to some extent a period of inaction seems to have been under way in several leading lines of the business, still the trade is gradually adapting itself to the fact that we have embarked in war with a foreign power, and that the trend of possibility makes it likely to be of longer duration than we are willing to allow.

The tension of strain under which we were unwilling to begin new enterprises or confidently continue those already in hand, has been relieved by the more pronounced conditions of actual strife, but the business community accepts the situation, doubt and uncertainty are no longer the controlling influences, and with stronger hopes for the future of business prosperity. This is especially the case in relation to the crops of our leading productions, the cereals particularly being sustained in price to a degree beyond the dreams of optimism.

Very few unfavorable circumstances have attended in a commercial way the necessary inauguration of active hostilities; with every condition of the general markets indicating strength and promising advanced prices, the manufacturing interests cannot avoid feeling that the future possesses but few elements of dread or insecurity, but that with the advancing of the season the ordinary demands of a regular traffic, when compared in volume with any year since 1892, will be found lacking in none of the promises attending a renewed prosperity.

The absorbing demand for war news and the consequent lack of the usual aggressiveness in the normal methods of business progress, form some of the reasons why a conservative dullness in trade movements succeeds the spirited opening of the present season; but this very close attention to possible results has enabled the more aggressive movements of our army and navy to exert but little detrimental effect on trade that had not already been discounted.

Especially in the West is the fact noticeable that no serious effects of the actual warfare have been felt in regular channels, the East, and the cities on the coast having felt more especially the season of dullness complained of at the present time. The money now so lavishly expended by the government will soon get in general circulation and exert an influence especially beneficial in respect to strengthening quotations, and renewing assurances of a productive future.

The volume of business still continues favorable when compared with the same period in recent years. A few weeks' dullness, even under the uncertain outcome inseparable from the prosecution of a war which, in its scope, takes in the entire globe, does not prove such a trade-killer as our fears would suggest.

The National Hope.

The belief is firmly established all over the country that when we finish up this little misunderstanding with Spain there are many things, emanating from war conditions, which will serve to strengthen and upbuild the Republic and from which may be dated a new birth in national advancement and constantly increasing prosperity.

The Blue and the Gray will as never before be found shoulder to shoulder an integral part of our country's stability as a nation, secure in its defence and a shield against slander. Vituperative recrimination, with the Rebellion forming the background, will never more be heard in the land to excite unruly passions or take the place of an appeal to reason.

Never before have political parties laid down their differences from a party standpoint, and hand in hand, Republicans, Democrats and Populists, marched in one harmonious phalanx to support and sustain the Executive in punishing the Dons, whose natural treachery to a modern civilization made possible the sinking of the Maine with its many victims. The pacification and freedom of the island of Cuba will come much more gracefully, with all its attendant blessings, from the nation which at so great a cost abolished slavery within its own domains.

Cuban prosperity will know a dawn it has long looked for almost in vain; it will commence with the invocation to the god of battles to crown our arms with permanent success. This productive soil so favored by bountiful nature will find prosperity from unrestricted fertility spring up on every hand; backed by a fidelity of purpose toward the accomplishment of a hallowed future, for which this struggling race has fought for a half century through disaster and dismay; a hopeless sacrifice of life at periods of unusual oppression, failing to check the hopes and aspirations that filled the hearts of a struggling band of brave and inspired patriots. But the glorified end, let us hope, is approaching with a certainty of the world's approval, and the continent of North America will take a step in advance on the final extirpation of the Spanish government from

Digitized by Google

those possessions it has held so long by a reign of terror from which even the blood-thirsty Turk would shrink aghast.

Shall we keep the Phillipene Islands? Do we know a good thing when we see it? Would England, or Germany, or Russia keep them if secured under the same circumstances? Uncle Sam has always been considered a shrewd business man. Were he to meekly let go in this case, the whole world would laugh at him for an idiot.

Convention of Credit Men.

The third convention of the National Association of Credit Men is to be held in Detroit June 22nd, 23rd and 24th. A very large attendance is expected. From the interest manifested by the various local associations which are electing delegates, and in business circles generally, it bids fair to be an enthusiastic gathering and one that will undoubtedly be able to legislate to the advantage of all business interests. A very attractive programme has been prepared and various social features and entertainments are also to be enjoyed by delegates and guests.

An innovation upon the established order and a feature that will be enjoyed by the representatives of different lines of trade is also in contemplation. It is proposed between sessions, which are to be limited to one a day, to form the credit men of certain prominent lines of trade into special parliaments for the discussion of matters of particular interest to them. Thus there will be a headquarters for the dry goods trade, the Hardware trade, the boot and shoe trade, the grocery trade, and various others, and definite hours of meeting of those belonging to these trades for the purpose above named. This plan will undoubtedly promote acquaintanceship among men in similar lines and will have a beneficial influence generally.

"The Man in the Corner" of the W. Bingham Co. store, Cleveland, Ohio, feels in this way concerning the war: "That business will be affected, is certain, but in just what way it is difficult to foretell with exactness. Probably there will be a contraction in the scope and a decrease in the number of great new enterprises, but a stimulation of trade in the smaller regular channels from which the people gain the greater benefit. There will be an increased consumption of labor, food products, textiles, and manufacturing materials of various kinds and a scarcity in some lines with increase of prices. There is nothing in the situation to worry a Hardwareman, and from the way the spring trade is booming it is evident that the Hardwareman finds the time to his liking."

Brace Hayden is back in New York, for a short time only, and it seems like old times to see him once more in evidence at the Hardware Club. The "glorious climate of California" has not dimmed the brightness of his eye, or taken the sparkle out of his conversation. He wears his honors as president of the Pacific Coast Jobbers' Association with that modesty that upheld him while a governor of the Hardware Club of New York. These visits East will be of frequent occurrence in the near future.

The Don and Uncle Sam took a bite at the same apple —Cuban pineapple.

Said the Don: "Will it be 'yes and no'?"

Said Samuel: "All right. Will you get out of Cuba?"

"No!" shouted the Don.

"Phillipene," said Sam, with a laugh.

A banana peel on the sidewalk is a nuisance and the man who steps on it usually tumbles to the fact.—*Exchange.*

The Arcade Girl.

The appreciation of the public for an artistic conception in advertising is capable, perhaps, of no better demonstration than the popularity into which the "pretty girl" idea of the Arcade File Works has sprung. A few months ago this company used the face of a very pretty maiden as the centre piece of a page advertisement. A bewitching smile displayed a row of pearly teeth, and argued the temper of an angel, and doubtless many a lone Hardwareman has mentally quarreled with the infant feline which is cuddled so closely to her cheek. The argument accompanying this charming illustration was to the effect that a good file, like the subject of the sketch, should possess good teeth, and a good temper. The idea "caught on," and was adapted to many uses, until it was eventually found even in the trade journals of our English cousins.

The Arcade File Works, arguing from this that they were on the right track, are still using the idea extensively, the latest form in which it appears being an attractive blotter, from the face of which gleams forth a smile, that makes even the office of a Hardware journal seem bright and cheery.

Speculating With a Speculator.

A wideawake young newspaper man of New York, whose conscience is not hampered and harassed by monumental piety, but who, for all that, is more or less impressed with the general idea of a duty toward his fellow beings, recently conceived the idea of importing a stock of handsome Bibles, and "circularizing" the clergy, offering them particularly advantageous terms which involved, of course, a handsome profit.

Among the many replies, both favorable and unfavorable, was one which, by its tone of semi-pathos, child-like trustfulness and whole-souled sincerity, impressed him very deeply. The writer, a poor country minister, stated that while the vagueness of his salary and the irregularity of its payments would not allow the purchase of the *de luxe* edition of the advertised Bible, yet he felt it incumbent upon him to write and congratulate the advertiser on the great work he was doing. He thought it must be a great privilege to spread the Word throughout the land (he did not mention the profit), and the letter terminated by appealing to the advertiser for his learned opinion as to the translation of three passages in the original Greek, which he quoted. The reason for asking was that the minister considered the translation in the accredited version of the Bible to be ambiguous and obscure.

After carrying the letter in his pocket for a week, and a load on his mind for a like time, our friend at last concluded that this sweet faith should be rewarded, and at once proceeded to a languagesmith and had the refractory angular Greek worked over into good round every-day English. From the fact that each sentence of the translation ended with an interrogation point, and that the body of the sentences made impertinent queries as to the place of purchase of the newspaperman's head gear, and as to the name of the liquid he was at present poisoning himself with, a great light broke in upon him. But it was not until the boys in the office began to make innocent inquiries as to his familiarity with Greek, and his sympathy with the large number of struggling parsons in this country, that his cup of bitterness was full; and then with a loud voice he proclaimed that in future the price on those Bibles would be raised fifty cents to the aforesaid struggling parson and no credit extended. He has not yet "caught up" with the particular "boy" in the office who wrote that letter, and had a Western confederate post it back to New York.

HARDWARE'S "Prices Current" are reliable.

Smashed a Beautiful Record.

The danger of saying too much is always more imminent than that of saying too little. The man who is convinced he has approximated the virtues of the Creator, and insists upon it to his fellow-men, is always more offensive than the man who secretly believes it, but spares his acquaintances the knowledge of the awful truth.

A story recently related to a representative of *Hardware* by the head of a large Hardware house in New York, illustrates the case in point. Something of this merchant's disposition may be gleaned from the fact that, when speaking of his employees, he says "the boys," with an affectionate intonation, born of long appreciation of their good points, and kind toleration for their occasional errors.

It was the intention of the house to put another representative on the road, and the man they had in view had been favorably, though not thoroughly, known to them for a long time. Negotiations were about concluded, and the signing of a remunerative contract by the salesman was regarded by him as a mere matter of form. At a final interview with his prospective employer, and evidently with the idea of further impressing the latter with his desirability, he said: "Mr. ———, I am an older man than you. I have been in this business for twenty-five years, and I wish to add that I have *never made a mistake.*"

As the would-be employer reached out on his desk in an abstracted manner, and gathered in the unsigned contract, which he slowly tore up in the same absent-minded manner, he remarked that it was a source of keen regret to him that he simply couldn't afford to employ such a valuable man; that there was not a man connected with the house, from himself to the dago who sorted the refuse paper every morning, who was not constantly making mistakes and profiting by the expetience; and that the direct result of the placing of a perfect man among the force would be immediate demoralization. As the perfect man slowly wended his weary way up the street, it probably occurred to him that he had smashed a beautiful record.

A Business Man's Views.

To a representative of *Hardware*, in a recent interview, James Surpless, of the well-known firm of Surpless, Dunn & Co., expressed the most encouraging views as to the results of the present Spanish "unpleasantness."

Mr. Surpless is one of that far-seeing type of American merchants, who believe that there is no better fosterer for American export interests than a vigorous foreign policy on the part of our Government. He believes that, since the foreign trade of our country has assumed the proportions of that of a first-class power, our navy and army should be commensurate to the demands made upon it by conflicting interests of other countries; and, while he deprecates sincerely the necessity for human bloodshed, he considers weakness or want of vigor at a time like this to be criminal. "Having once gotten into this fight," he says, "let it be brief and decisive."

Mr. Surpless further states his belief that the direct results of our present war will be most beneficial to us as a commercial nation. Other nations, who have hitherto regarded us as a mushroom growth of large size and uncertain strength, cannot fail to be impressed with a most wholesome respect for our power to enforce our just demands, as well as to our perfect willingness to spend freely of the almighty dollar, to which it has pleased many people to regard us as willing and helpless slaves. The navy will be increased to such an extent as to rank it among the first three powers of the world; while in efficiency and proficiency, it will, through the practical experience and practice in gunnery, be advanced beyond the navies of other nations. The army will be brought up to the numerical strength demanded by our necessities; and if much active service be seen, will, by the culling out of the dead wood among officers and men, place it on the same plane of merit as those armies whose countries have kept them in the field while ours has been theorizing in barrack life.

Later Congratulations.

Editor Hardware: I have hardly recovered from the surprise occasioned by the wonderful Association Number of *Hardware* which the mail carrier dropped on to my desk a few days ago. I knew you were capable of something real good, but it far exceeded my expectations. It is an elegant number; I expect to keep it as a memento, and, as we say to our friends on their anniversaries, I wish *Hardware* many happy returns.

Respectfully,

JOHN F. BAKER,
Sec'y Ohio Hardware Ass'n.

Dayton, O., Apl. 27, '98.

Editor Hardware: I am in receipt of your very beautiful *Hardware* Association Number announcing your eighth anniversary, and giving much of time and labor to Hardware Association interests. You can certainly be proud of it for many years to come, and congratulate yourselves on the fact that such work is seldom equalled, and probably never surpassed.

It is a work of art in all of its departments—half-tones, cuts, advertisements and all—and ought certainly to be appreciated by every man in the business. It surely should be an incentive to larger work in state and local associations, and deserves the thanks of all men connected therewith. The coming years should bring much of additional prosperity to such work and its originators, as we are certain they will. Voicing all Hardwaremen in offering kindest wishes for growth and prosperity,

Very truly,
H. C. WISEMAN,
President Ohio Hardware Association.

Springfield, O., April, '98.

Hardware, an ably edited review of the American Hardware market, celebrates its own eighth anniversary by an excellent special issue devoted to Hardware associations, present and future. It is a matter of regret to *The Tradesman* that the Southern retail Hardware associations fall so generally in the latter rather than in the former class. The retail trade in the Southern States would profit much by proper organization, and not a week goes by without some of *The Tradesman's* correspondents mentioning or emphasising that need.—*The Tradesman.*

A Full Naval Outfit.

A progressive and patriotic cigar dealer on Columbus Avenue, New York, has built and placed in his window a formidable looking battleship, composed of the various forms in which tobacco is marketed, and having a length over all of about four feet, with a beam of one foot. Her sticks and smokestacks are Havana wrapper, and doubtless Oregon pine filler, while her armor plates are a heavy quality of Connecticut wrapper of impervious appearance. But the height of dread reality is attained in her armament. Peering ominously from unsuspecting port-holes, and occupying important deck positions, fore and aft, are mounted many large calibre, rapid-firing Pennsylvania seed cigars, giving the impression of dreadful execution. The result of Dewey's work in Manila would sink into insignificance compared with the mortality accompanying an aggressive campaign with offensive weapons of this kind.

The production of iron ore in France during the year 1896, according to a report lately issued, reached a total of 4,062,000 tons, being an increase of 382,000 tons over 1895. —*American Manufacturer.*

Akins' Felt Advertising Mats.

C. E. Akins, No. 12 Centre Street, New York, has for years been the largest maker of the popular Felt Mats that are now so largely used for advertising purposes by leading manufacturers, who feel that the distribution among their patrons of this class of publicity can be relied upon to produce the best results. It is stated that wherever they have been introduced into the system of publicity adopted by the advertising manager, succeeding years invariably found increased quantities necessary, and it must be a rare thing to find their pleasing presence considered undesirable by any patron of the manufacturers who distributed them. Illustrating this tendency on the part of the largest makers, Mr. Akins is sending out a two-page circular showing in fac simile the order from Rathbone, Sard & Co., the celebrated stove manufacturers, for the successive years of 1895, 1896, 1897 and 1898, as in no instance was the order for less than 5000 mats, the circular is a convincing proof of the utility of these mats for the purpose intended. Estimates will be given and samples furnished upon application to the above address.

A Twentieth Century Trophy.

One of the handsomest silver trophies we have ever seen, was placed in the windows of a Broadway clothing store recently. One does not know whether to admire it most

as a specimen of the silversmith's handicraft, or as an example of the progressive policy of the Twentieth Century Lamp Co. The trophy is 26 inches high, and weighs 42½ pounds. It is valued intrinsically at $1000, and carries to the winner an income of $25 per week. The principal restrictions imposed upon the winner are that he shall hold it by perpetual competition on tracks under the management of the National Cycledrome, and that he shall wear the Twentieth Century winning souvenirs.

The design, as will be seen from the illustration, is a cycle track in silver, supported by a pedestal of the well-known plumes of the company, which in turn rest on a silver base, on each of the four corners of which is the regulation Twentieth Century lamp.

Hobart B. Ives, of Hobart B. Ives & Co., New Haven, Conn., was interviewed recently on Chambers Street, he having just returned from a "flying squadron" trip through the large cities of the West and Southwest, lasting twenty days. He reports substantially, that never in all his experience has he found his especial line of business in a condition of so much promise for the revival of trade. Stocks were by no means in excess of current requirements, and his sales were the largest he has ever made on a similar trip.

Overstudy sometimes makes men mad. An understudy often has a similar effect upon an actress.—*Exchange.*

Magnolia Metal Co.'s Trade Mark Sustained.

At a stated term of the United States Circuit Court for the Southern District of New York, held in the city of New York, April 18th, 1898, it was "ordered, adjudged and decreed" that the Magnolia Metal Co., in the word "Magnolia," as applied to anti-friction metal and alloys, made and sold by them so largely, was possessed of and owned "a good and valid trade mark." This was the outcome of a suit brought by the Magnolia Metal Co. against Benjamin and Moses Lowenstein, trading as the Nassau Smelting & Refining Co., who were using the word "Mongolia" upon anti-friction metal made and sold by them, which name in such use, was so clearly a violation and infringement of the exclusive rights of the Magnolia Co., that his honor, Judge Wallace "ordered adjudged and decreed" that the said defendants "be perpetually enjoined and restrained" from a continuance in the manufacture and sale of any metal under that name. The Judge in his decree deciding that the use of "the word 'Mongolia' or any other word calculated to deceive the public by a like close imitation of the complainants' trade mark 'Magnolia'" was unlawful, and was amenable to the recovery of damages for the same.

The Coldwell Lawn Mowers.

The Coldwell Lawn Mower Co., Newburg, N. Y., are doing this season the largest business since the company was established. The addition to their usual and regular line of a special line of Golf Mowers has proved to be one of the most successful features of the season, and while the demands of the trade for their regular lawn mower favorites have exceeded their most sanguine expectations, and still continues unabated, the addition above referred to will make a larger plant necessary before commencing another season's business.

The company was successful in obtaining a contract from the Commissioner of Parks of Greater New York for about 300 hand mowers and nearly 70 horse mowers, which will be used by the authorities in beautifying, by their aid, the numerous parks of New York City, sustaining the pride felt by the people in these centers of municipal healthfulness. Other park systems throughout the country are adopting the lawn mowers made by the Coldwell Lawn Mower Co., among which Buffalo, N. Y., provides the latest accession.

Lubrication of Gas Engine Cylinders.

The proper lubrication of gas engine cylinders has been a very difficult problem. The problem, however, seems to have been very successfully solved by an official of the Pennsylvania Railroad Co. He writes as follows:

"I had a gas engine at Sharon, Pa., running a pump, and the man that had charge of it allowed the lubricator to run dry and cut the piston, piston rings and cylinder. The makers of the gas engine said the cylinder would have to be sent to the shop and bored out, and a new piston put in. It was our busy season and we could not do without water. I had some of Dixon's finely pulverized graphite, and I commenced to feed it into the cylinder through the suction pipe with the air and gas, with immediate relief. After about two weeks the engine was running smoother and using less gas than ever before.

"I had this same engine apart last Saturday, and every place that was cut is smooth as glass. This one instance saved us about $75.00. I have great faith in this graphite and always keep it on hand."

W. C. Heimbuecher, selling agent of iron and steel products, Chicago, has removed from No. 100 Lake Street to No. 36 LaSalle Street, suite Nos. 209 210.

James L. Prescott: Founder of a Great Business.

James Lewis Prescott, the founder of the house of J. L. Prescott & Co., was born at Epsom, N. H., March 8, 1828. He descended from sturdy New England stock, with an English ancestry, which landed in the Massachusetts colony at an early colonial period. The name Prescott is familiar to the readers of American history. Mr. Prescott's ancestor was General William Prescott, who commanded at the battle of Bunker Hill, June 17, 1775.

In 1866 Mr. Prescott moved to North Berwick, Me., and in 1870 commenced the manufacture of stove polish in a structure only sixteen by eighteen feet in size. He first put on the market the "Universal" brand, which soon became very favorably known in a limited territory, but the superior quality of the product worried his competitors not a little. The total daily output of about five gross was delivered at the railway station in a wheelbarrow. The business was a success from the start and yearly increased until it reached an annual sale of about eighteen thousand gross.

In 1888 Mr. Prescott retired from business and was succeeded by his son, A. L. Prescott and C. O. Littlefield, under the firm name of J. L. Prescott & Co. J. L. Prescott now lives at Battle Creek, Mich., where he is passing his days in peace and quietude and where he and Mrs. Prescott recently celebrated their golden wedding in the midst of a large circle of relatives and friends.

In 1887 Amos L. Prescott, the present head of the house, conceived the idea that the old fashioned stick-to-it-all-day method of blacking a stove was a drudgery for housekeepers, that ought to be abolished. He accordingly set about producing a paste stove polish which proved to be a great success. It was put on the market as "Enameline, the Modern Stove Polish." It was determined to make Enameline famous through the most vigorous methods of publicity. In a single year more than $200,000 had been appropriated for advertising.

"It soon became evident," says A. L. Prescott, "that Enameline was to be the world's stove polish and that another location must be selected in one of the great centres of commerce, where adequate facilities for manufacturing and shipping could be provided. This led to the selection of New York City for the new headquarters, and in the spring of 1896, an extensive factory constructed after modern plans was put in operation at Passaic, N. J., twelve miles by rail from New York on the Passaic River, where steamers from the vast water connections about New York, Brooklyn and Jersey City, enter the docks of the company every day. The five gross per day of 1870 had grown to an output of nearly five car loads per day, and was being distributed to every English-speaking country on the globe, as well as in Germany, Scandinavia, Holland, Belgium and South America."

The year 1896 witnessed the largest growth of any in the history of Enameline; both the Passaic and the North Berwick factories were used in conjunction to supply the enormous demands. As the Passaic factory developed, the North Berwick plant was gradually given up, and at the present time, the entire output of Enameline is from the New Jersey factory, and the location as regards skillful labor, plenty of space for growth, and for shipments by water or rail, is most desirable.

In the spring of 1894, J. L. Prescott & Co. commenced the introduction of Enameline into foreign countries, and at the present time they have depots in Liverpool, London, Glasgow, Cape Town, Hamburg, Melbourne, Antwerp, Rotterdam and Copenhagen.

On July 1, 1897, J. Edward Prescott, the son of A. L. Prescott, was admitted into partnership, thus being the third generation to be represented in the business. This gentleman has charge of the Passaic factory. J. Edward Prescott has been especially active in the introduction of labor-saving machinery.

The total length of all the buildings of the Enameline factory at Passaic is more than 700 feet, with a capacity of fifty tons per day. The buildings are lit with electricity, and are ventilated by hot and cold air machinery. The company owns its own machine shops. Over three hundred hands are employed at the present time, and they are paid more than the average scale of wages, the firm believing in a philanthropy that helps people to help themselves.

After the plumbago from the East Indies has been landed at the docks of the company, it is first put through a milling process, which is a marvel of mechanical ingenuity; these mills accomplishing with the work of one man, what formerly employed twenty-five workmen. The company manufacture their own tin boxes, and the enormous size of the production can be conceived, when it is said that they have twenty-two stamping machines with a capacity each of sixty pieces per minute. About five tons of tin plate are used each day. They also make their own packing cases,

JAMES LEWIS PRESCOTT.

and more than 3,000,000 feet of pine lumber is used annually.

The covers of packing boxes are nailed on by machinery. The labels put on tin boxes are ordered in 100,000,000 lots.

The sales department is under the supervision of P. M. Berry, for a number of years connected with J. L. Prescott & Co., a hearty co-worker in the company's energetic policy of push.

The offices are at Nos. 90–92 West Broadway, New York, where the enormous details of the sales department, the direction of large appropriations for advertising, the supervision from one to two hundred traveling men in the United States and foreign countries, and contracts for shipping by land and water, are negotiated and directed.

An interesting fact demonstrating the favor in which American tools are held in foreign markets, is instanced by Chas. Morrill, No. 35 Warren Street, New York. Some time since this firm saw fit to increase the export price of their saw sets, cutting pliers, seal presses, saws and other lines, to bring it up to the domestic price. Notwithstanding that this placed the goods out of competition, so far as price is concerned, with those of foreign manufacture, the export trade has held its own, and in some instances showed a steady increase. The latter condition has been particularly noticeable in regard to the Australian market.

The U. S. Mfg. Co., Fond du Lac, Wis., announce a novelty in cyclometers. It is called the "U. S. Trip," because it indicates the distance covered on each trip, as well as the total mileage of the season. It is finished in polished nickel, and in antique copper, and registers ten thousand miles with independent trip registers of one hundred miles.

Recent Trade Publications.

The Erie Specialty Co., Erie, Pa., have recently issued a new catalogue intended for the trade of 1898. It is a pamphlet of nearly fifty pages, printed on excellent paper and bound attractively, being the most complete catalogue of the varied products of this progressive company we have seen. In the catalogue the goods are classified in a manner that may with advantage be adopted by all manufacturers of similar products; each article has its own arbitrary catalogue number, and if ordered by number only, no mistake can possibly occur in the filling of the order. Among its contents, which consists of a line of specialties original and unique, are to be found the Walker's Quick Easy Automatic, and Samson cork pullers, as well as the full line of plain, wire, self-pulling corkscrews, in the manufacture of which the reputation of the company was firmly established. They are manufacturing among their line of salable specialties a fine assortment of Lemon Squeezers possessing labor-saving devices of no common order, under the names of Quick and Easy, Perfected, with stand or clamp; Acme, Fifth Avenue Hotel and Samson. Their other specialties include milk shakes, in great variety; ice grips and ice shaves, cigar and tobacco cutters, cigar lighters with and without cutter combined, etc. This desirable catalogue, which may be had upon application, should be in the hands of every dealer handling goods of this "up-to-date" character.

Berger Bros., Nos. 231 and 237 Arch Street, Philadelphia, have issued a handsome catalogue and price list for 1898, of their Tinners' Hardware and Roofers' supplies. This is a finely printed book of 136 pages, bound in heavy cover, with gilt lettering, and is thoroughly illustrated with prices and descriptions. It would be an impossibility to enumerate the very many articles shown in this handsome work, but the Hardwaremen will find described within it everything that can possibly be expected in connection with the lines enumerated. In a note of introduction, the company say: "In presenting our annual catalogue for 1898, which fully illustrates our extensive line of supplies, we do so with the kindest regards to our patrons who have favored us with their orders during the past. We take great pleasure in announcing that we have the largest plant of tinners' Hardware and roofers' supplies in the country, and have a large three-story brick factory at Germantown Junction for the manufacture of corrugated conductors, hanging gutters, etc., which places us in a position excelled by none. With these exceptional facilities we hope to retain the good will of the trade by our usual prompt attention and producing the best goods at lowest prices."

The Howard Chainless Cycle Co , No. 759 Sumner Avenue, Newark, N. J., under the caption of "Read What They Say," print in pamphlet form a number of endorsements of the Howard Chainless, the reading of which would naturally impress the prospective buyer that he need seek no further, if the object of his quest is a chainless wheel. In this pamphlet of thirty-four pages the many important and essential improvements to be found in this wheel the present season, are dwelt upon by those best qualified to know, the riders thereof. The manufactnrers conclude that the "Howard Chainless," possessing "light weight, narrow tread, central draught and superior workmanship," is of right considered a standard chainless wheel, the strength of its gears adding greatly to its value.

The Weatherwax Mfg. Co., Bloomsburg, Pa., manufacturers of the Weatherwax Screwless Door Knob, under a cover caption of "Things to Adore," issue a very neat four-page leaflet, calling attention to the many advantages possessed by this greatly improved style of door knob, which they are manufacturing in all the various styles demanded by the Hardware trade. From the description of its merits given in the leaflet, we should consider a large sale would be the result when once the trade are made familiar with its great convenience.

The Luckenheimer Co., Cincinnati, Ohio, and No. 26 Cortlandt Street, New York, have recently published a catalogue of their extensive production, in portable form, pocket size, so to speak, covering a great variety of brass and iron valves, injectors, whistles, lubricators, oil and grease cups and steam specialties.

The Profits of Cash Discounts.

In almost every line of trade a discount is allowed for prompt cash, for cash in ten days, and for cash in thirty days. The discount for cash ranges from the minimum of a quarter of one per cent. up to ten per cent., and even to fifteen per cent in some cases. The discount for cash is a very important factor in business dealings and yet, strange to say, it is recognized, apparently, by very few retailers.

The shrewd, alert retailer, perceiving the advantages of cash discounts, will make it the earnest purpose of his business career to reach the point where he can discount all his purchases. It is not possible for all retailers to pay cash for all their purchases at all times, but in his own interest it is the duty of every retailer to take the advantage that the terms of sales offer up to the limit of his ability.

Let us examine into these advantages. If the face value of a bill matures at 90 days and the time of sale is subject to a discount of one per cent. per month. then three per cent on the amount will be saved by cash payment. The ambition of the retailer should be to make this entire amount, but failing to accomplish that he should save as much of it as possible, say at least one per cent.

To arrange one's financial system so that he may acquire the habit of discounting bills should be the aim of every enterprising merchant. It will be a surprise to those merchants who at present feel that they are selling at sufficient profit to be able to disregard a small matter like one per cent. a month, to see how fixed the discounting habit will become if it is only indulged in. It is a most admirable habit, because it is a profitable habit.

Anticipating payments by the retailer may be likened to the morning opening of his business place. If he opens fifteen minutes earlier than usual, the fifteen minutes thus gained will appear to be the longest fifteen minutes of the whole day. So it is with a dollar saved by discounting. While it is only a dollar, yet it seems larger than an ordinary dollar, because it comes as a special reward for the capable administration of the finances of the business.

The time-honored terms of the dry goods trade, for example, six per cent. 10 days, or five per cent. 30 days, with datings, were undoubtedly devised to induce retailers to anticipate their payments. Large profits follow from the acceptance of these terms. For example, a bill sold subject to six per cent. in 10 days, or five per cent. in 30 days, with 30 days dating, practically gives the retailer six per cent. off 40 days, or five per cent. off 60 days. Note that for the 20 days the buyer loses one per cent., or in other words, that by neglecting the discount he pays interest at the rate of eignteen per cent. per annum for that interval.

On terms of 30 days net, or one per cent. for cash in 10 days, the same loss of discount occurs if the bill is permitted to reach maturity. Successful merchants improve these opportunities to make money; hence the advantage of cultivating the discounting habit.

JOHN R. DEZELLER.

A Kansas City Hardware firm received an order from a country town the other day for a case of iron tonic. It was turned over to a drug house.

Interesting Facts About a Famous Lock.

Believing that the subject of locks has a peculiar interest to the class of readers whom our pages reach, we have gathered the following information on this subject.

It is a curious fact that both in England and America the name most prominently identified with locks is that of an American; in the former, that of A. C. Hobbs, and in the latter, that of Linus Yale, Jr.

While the makers of the Yale lock, the Yale & Towne Mfg. Co., Nos. 84–86 Chambers Street, New York, have associated the trade name "Yale" with many of their finer products, in connection with locks it can only properly be applied to the original invention of Mr. Yale and to the latter improvements thereon which have been developed and introduced since his death by the company.

FIG. 1.

The essential characteristics of the Yale system are shown in the accompanying illustrations, and consist in the separation of the key and tumbler mechanism from that of the bolt mechanism, and in the adaptation of a key of sheet metal to the actuation of the peculiar tumbler mechanism

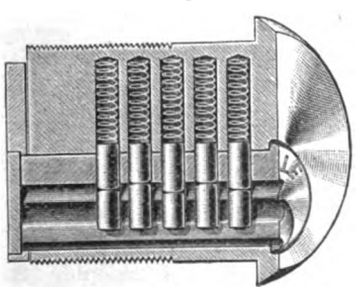

FIG. 2.

shown. The original Yale lock had a perfectly flat, thin key, which was the forerunner of the innumerable forms of flat key now so generally used. It is a common mistake to characterize any lock with a flat key as a "Yale Lock," and many persons are thus misled. The flat key was an incident in Mr. Yale's invention, but its chief importance lies in the form of tumbler mechanism adopted, the vast capacity for key changes which this affords, and the resulting immunity from liability to accidental interchange of keys. In common locks the key changes are counted by the dozen only; in the Yale lock they are counted by the thousand. The flat, steel key of the original Yale lock gave place later to the corrugated key, and this in turn to the latest form, the "Paracentric," which is shown by the illustration. The peculiar key-way used with the latter adds greatly to the original security of the lock, while the intricate form of the key itself practically precludes illicit duplication.

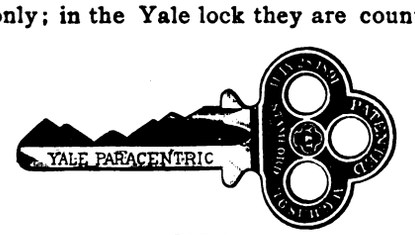

FIG. 3.

The Yale lock is a curious illustration of the adage that "there is nothing new under the sun." In the pyramids of Egypt locks have been found embodying the pin-tumbler system. Here, however, the resemblance ends. In the application of the principle, and in all refinements of mechanical detail, the difference is as wide as that between the civilization of Egypt under the Ptolomies and that of America at the close of the nineteenth century.

Death of William Witte.

William Witte, the surviving member of the firm of John G. Witte & Bro., No. 75 Chambers Street, New York, died of cancer of the stomach, at his residence in Brooklyn, on Tuesday, April 26th. Mr. Witte was born in Lubeck, Germany, in 1838, and in 1857 came to this country to join his brother, who was at that time already established as an importer of Hardware, cutlery and the general assortment of tools and small Hardware made in Germany and sold largely by the jobbing houses of this city until within the last decade or more. John G. Witte & Brother were the first, or very nearly so, of the pioneer Hardware houses which made Chambers Street the distinctly Hardware street it afterwards became, they having located there in 1862. Mr. William Witte was identified with his firm for 35 years, and was a very pleasant unmarried gentleman of quiet and unassuming habits, devoted to his business, from which he was rarely absent, except when compelled by illness. He was a member of the Hardware Club of New York, and the Germania Society of Brooklyn, in the parlors of which organization his funeral services were held on April 28th, interment being in Greenwood. This long established business it has been decided will be closed up, when the stock remaining shall be disposed of.

Discovery and First Use of Coal.

Our anthracite coal fields were first discovered by a hunter named Nicho Allen, during the time George Washington was president. Allen encamped one night in the Schuylkill regions, kindling his fire upon some black stones. He went to sleep near the fire, and awoke to find himself almost roasted. The stones were on fire, and anthracite was burning for the first time. A company was organized shortly after this for the purpose of selling this coal, but met with little scccess. It was taken around to the blacksmiths, but they, not knowing how to use it, would have nothing to do with it. Some of it was shipped to Philadelphia by a Colonel Shoemaker and sold there. It was so unsatisfactory that a writ was gotten out from the city authorities denouncing the colonel as a knave and a scoundrel for trying to impose rocks on them for coal. What changes have been wrought in the past century. Philadelphia owes its growth and progress largely to anthracite coal.—*Exchange.*

Engineering Secrets.

It is the practice of some engineering establishments to maintain a great air of secrecy and important mystification about all that goes on within their walls, and to impress upon outsiders that large chunks of valuable information are constantly being evolved therein and kept bottled up for strictly private consumption.

Other firms, often of greater reputation, are, on the contrary, extremely liberal with information concerning methods and plans and seem to think that there is no loss whatever in permitting their ideas to go abroad for the benefit of whom they may concern.

Differences of opinion may exist as to the correctness of either position, and the outsider can only judge by circumstantial evidence, which in this instance is sometimes stronger than direct testimony. Manufacturing establishlishments may safely be judged by their products, and it is the general testimony that the shops which are the most outspoken concerning their methods and the most liberal in extending courtesies to visitors, are the establishments whose products stand the highest in reputation, performance and value. This point was very well brought out in a recent discussion over a paper upon the construction of ships, recently read in England, in which the remark was made that much special information, belonging to a private firm, had been given to the public. One of the speakers remarked that he desired to emphasize, not only the desirability, but also the duty of designers and firms having information that would be useful to other members of the profession to give it out for the benefit of all. No one man is so very clever as to be exclusively in possession of all the valuable information, and all can learn from each other. Indeed, in one of the leading American establishments it is admitted that quite as much valuable information is obtained from engineering visitors as it is at all likely they take away with them, and we can believe this to be quite true of several shops which might be named.

When we turn to the places which attempt to maintain strict and solemn guard over everything, and which impose deep secrecy upon all designers and employees, we usually remark a decided absence of originality about the products which lead us often to wonder what they can be hiding behind the closed doors and silent conclaves.

There is no doubt that the best shops are the most liberal and open to visitors, and impose the least restrictions on the freedom of speech of their employees, and the places which maintain the greatest secrecy apparently are the very ones which have the least to conceal and the most yet to learn. The most cherished secrets they possess are often their own deficiencies, and yet these are most apparent to all, for by their works we do know them.—*The Engineer, New York.*

Tempering a Spring.

It is not every smith who knows how properly to temper a spring. It is not a hard job to some smiths, but other smiths, professional and amateur, claim that it is. In getting ready to temper a spring, one should begin with the forging itself, for if that be not well done, no amount of "know how" can make a successful tempering. The forging should be done with low heats and light blows, and the steel should not be hammered while cold, with heavy blows at least. Avoid making hammer marks in the steel when forging, for, although such marks may be worked out, they do not add to the strength or long life of the spring. A good many failures of seemingly perfect springs could doubtless be traced to this little point in the forging. After the spring has been hammered to size, spend a little extra time in lightly hammering the steel when it is nearly cold—but don't strike hard. The light hammering will toughen the steel and make a better spring. The outside surface or "skin" seems better adapted to spring work where the surface is hammered up, instead of being filed or ground. After the hammering is done, polish the spring with a bit of emery paper. It is best not to put it on an emery wheel, for then the skin above mentioned would be destroyed. Sometimes, however, it is necessary to partly shape the spring by grinding; but let this be done at an early stage of the job, so that the outside skin may be restored as much as possible. When ready for the hardening, there are two ways of doing the heating—either by holding the spring over a clean fire with a small pair of tongs, keeping the spring high up so that it will heat slowly, or by first heating a heavy piece of iron red hot, and then placing the spring on that until the steel is heated.

When the spring is fully and uniformly heated to a light red, plunge into cold, but not ice-cold, water. The amount of twist that is got in the spring by this operation depends on the manner in which the spring is put into the water. If it be put in so that a flat side touches first, the sudden cooling of that side will cause the spring to be pulled out of shape, and held there by the subsequent cooling of the rest of the spring. If put into the water endwise, or straight, there will be but little distortion of the spring. After hardening, polish the steel with a bit of emery cloth until the metal is bright, clean and white, then put a few drops of oil on a bit of paper, light it, and hold under the spring until every portion of its surface is covered with a thick coating of smoke. Next heat the spring slowly, holding it high up the forge fire until the smoke is all burned off; but it should all go alike. Don't let one part of the spring get so hot that the smoke is all burned off while another part is thickly coated. This means a spring of uneven temper, that will break off in short order. When the smoke has been carefully burned off, lay the spring on the ashes of the forge to cool slowly, and in a few minutes it will be ready for work.—*Scientific Machinist.*

Some Georgia Nuggets.

Some folks would rather wait all day fer de wagon than run ten yards ter ketch a train.

Doan' judge de church by de steeple. Some steeples are so high dat sinners can't hear de bell ring.

De worl' was a mighty good worl' till it got folks in it; kase in dem days dey wuzn't nobody ter tell you how bad it wuz.

De prodigal son never went home till he got hongry. After dat he got religion en made a bee-line for de ol' man's.

De middle er de road is purty dusty, but its lots safer than stumblin' roun' in de woods.—*Exchange.*

The extent to which ball bearings are now employed is shown by the importation of at least 200,000,000 balls a year, mostly from Schweinfurt, Germany, where the largest manufactory of steel balls in the world is located. Recently a company has been formed in Allentown, Pa., which includes many of the stockholders of the German company, and capital has been subscribed for the erection of large works there for the manufacture of steel balls. The plant is to have a capacity equal at least to the importation demands of last year.

The Bureau of the American Republics is officially informed that the government of Ecuador is asking for bids for the construction of an iron building, to be used as a custom house for the port of Guayaquil. Payment for the work will be guaranteed by import duties of the port, appropriated for that purpose. The plans and specifications and further information may be obtained from Miguel Valverda, consul-general of Ecuador, No. 24 State Street, New York city.

Some Curious Old Patents.

In our German contemporary, *Glaser's Annalen*, some interesting particulars are given as to early British patents. It will be seen that the idea, at least, of some of our modern inventions was anticipated by these curious old patents. We give below some interesting examples:

The first patent specification, accompanied by drawings, is that belonging to the British patent No. 169, of 1673, which describes a machine for grinding seeds and extracting oil; also a machine for cleaning and dredging rivers, harbors, etc. The second patent, with drawings, is the British patent No. 186, of 1675, relating to a mining pump.

Thomas Master, a Pennsylvania planter, secured a British patent, No. 401, of 1715, for a process for treating corn. This patent is remarkable in that it states that the invention was made by Mrs. Sibylla Masters. This is, perhaps, the first case of a patent granted for an invention made by a woman.

An English patent (making steel, etc.), granted May 6, 1671, to Prince Rupert, Duke of Cumberland, was assigned to King Charles II.

A patent granted to Prince Rupert, Duke of Cumberland, gave him the right to take oath from his workingmen that they would keep the invention secret.

The Marquis of Worcester, on November 15, 1661, secured a British patent, No. 131, covering the following inventions: A self-winding clock, rapid-firing guns and pistols, a device for detaching runaway horses, and lastly, a ship constructed to sail against the wind, and capable, when anchored, of use as a water motor or windmill.

The patent 183, of October 25, 1675, grants a London merchant, Justinian Angell, the right to erect lighthouses at the mouth of the Humber, and to collect a duty from the skippers.

By letters patent No. 255, of August 23, 1687, the Duke of Albemarle secured the sole right of erecting sawmills, driven by wind or by water, in some colonies (excluding New England).

A repeating rifle is described in the patent to Charles Cardiffe, No. 216, of February 16, 1682.

Patent No. 184, of 1675, shows how to convert foul water and salt water into palatable drinking water in large quantities and quickly.

The idea of catching fish by the aid of lamps is found in the patent No. 295, of April 22, 1692.

The first patent for a burglar alarm is the British patent No. 331, of January 11, 1694.

Patent No. 314, of January 31, 1693, covers a process for utilizing the heat generated when slaking lime.

The first English patent containing a mention of coffee is that granted to Richard Bull, No. 373, of December 22, 1704, for a coffee roasting machine.

The first patent containing a reference to potatoes is No. 413, of May 17, 1717, for a process of making starch from potatoes.

A chemical fire extinguisher is described in patent No. 458, of November 12, 1723.

Thomas Savery's patent for his steam engine is numbered 356 and dated July 25, 1698.

A wave motor is described in patent No. 315, of 1693.

The use of the hydraulic jet for the propulsion of vessels is described in the British patent No. 132, of May 16, 1661, granted to Thomas Toogood and James Hayes.

The British patent No. 236, of 1684, granted to John Cliquet, relates to a carriage-like machine adapted for use as a conveyance for one or two persons. The inventor apparently had a motor carriage in view.

The first patent relating to street lighting is that granted in England to Vernatty, No. 227, of 1683.

The first patent relating to street cleaning is a British patent granted February 21, 1674, to Thomas Toogood.

On June 20, 1699, Edmund Heming secured a British patent, No. 364, for a street sweeping machine.

The British patent of Edmund Heming, No. 282, of October 17, 1691, is for the "making of iron plates tinned over, commonly called tin plates, as good as those brought from and made in Germany." The use of the words "made in Germany" at such an early period is significant.—*Scientific American.*

The First Typewriter.

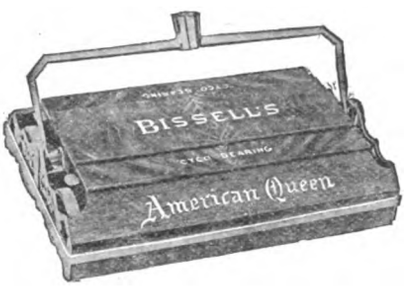
The New York *Sun* reports that the inventor of the first typewriter is still living. It is not surprising to learn that he was a Connecticut Yankee. The first instrument was a home-made affair, and the inventor, according to this account, never reaped the reward of his great idea. This first typewriter was perfected about thirty years ago, and received little encouragement from the scientists of those days. The machine did its work well, although in a slow way as compared with improved modern machines. The typewriter was first set up in a small melodion case in New London. The type was worked with a keyboard. The machine was taken to various States and exhibited, when inventors, seeing the idea, set themselves to work, and the result was the modern typewriting machine in all its multitudinous variations.

A Lot of Bulls.

It was a Scotch woman who said that the butcher of her town only killed half a beast at a time. It was a Dutchman who said a pig had no marks on his ears except a long tail. It was a British magistrate who, when told by a certain rascal that he was not married, responded: "That is a good thing for your wife." It was a Portuguese mayor who enumerated, among the marks by which the body of a certain drowned man might be identified when found, a "marked impediment in his speech." It was a Frenchman, who, contentedly laying his head on a stone jar for a pillow, replied to an inquiry whether it was not too hard: "Not at all, for I have stuffed it with hay." And it was an American who lecturing one evening said: "Parents, you may have children, or if not, your daughters may have."—*Household Words.*

A peculiar fabric which is likely to be useful for a variety of purposes is being manufactured in Brussels. It is flexible, transparent, and waterproof, and can be washed off like a pane of glass with cold water by means of a sponge. The material is mainly intended for portieres, shades, umbrellass, etc. The patented process consists in filling up the meshes of a wide meshed fabric, such as muslin, with chrome gelatine, or a similar substance, and rendering the chrome gelatine insoluble by exposure to light. The stuff is then coated on both sides with boiled linseed oil or fat varnish, and the treatment with chrome gelatine and linseed oil is repeated several times. The fabric is decorated by printing.

Burditt & Williams, Boston, announce on page 36 of this issue a new Marty Rat Trap, No. 3½. They state that this trap is slightly smaller than their No. 3, but is the same in every other respect. It is made, they say, "to meet the competition of worthless imitation traps by furnishing a genuine at a cheaper price." They will be pleased to send quotations and other information on application.



The E. S. Stiles Co., Watertown, N. Y., are sending their friends an attractive card showing samples of some of their leading productions. Prospective purchasers are requested to send samples or sketches, for the purpose of obtaining prices.

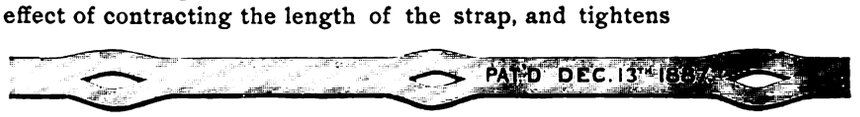
NEW GOODS AND SPECIALTIES.

Cyco-Bearing American Queen.

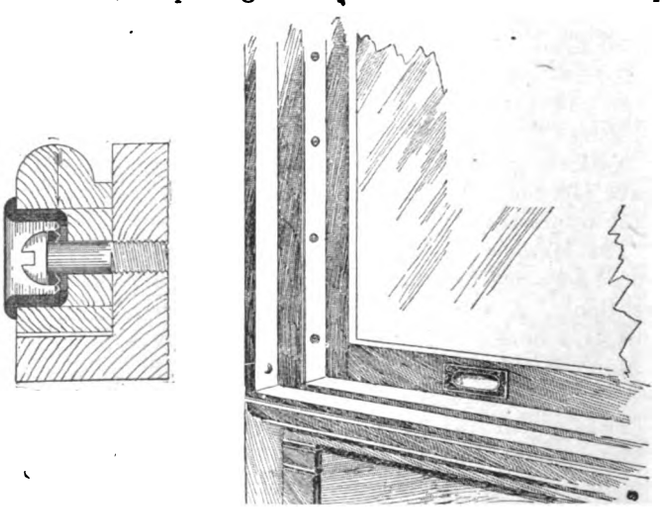
The latest production from that active quarter where so much is produced, the Bissell Carpet Sweeper Co., Grand Rapids, Mich., and New York, is the Cyco-Bearing American Queen, made expressly to meet the demand that exists with an exclusive class of customers who are always willing



to pay a little more for an exceptionally fine article. This sweeper is made from imported mottled mahogany veneer, selected, the figure being matched to produce the finest possible effect. This veneer is given the highest grade piano finish that skilled workmanship can produce, and contains all the latest and best patented devices of the Bissell Co., including "cyco" bearings and dust proof axle tubes. The metal parts are all nickel, and only the best materials throughout are used in the construction of this sweeper. The company say that no expense has been spared to make the American Queen attractive in the highest degree, and mechanically perfect. They add: "No piece of furniture going out from any of Grand Rapids' famous factories at any price is finished finer than Bissell's 'Cyco' bearing American Queen sweeper." The Bissell Co. also strongly recommend the use of their upholstered handles with this sweeper.

De Haven's Shipping Department Specialties.

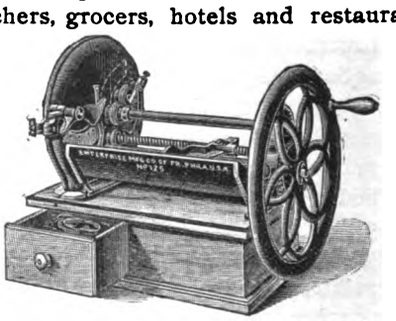
De Haven Mfg. Co., Nos. 50 to 54 Columbia Heights, Brooklyn, N. Y., are placing upon the market among a



number of other specialties the Self-Drawing Wire Box Strap, illustration of which is given herewith. This is a flat wire strap that lies close to a case, making a neat finish when applied; the strap is provided with split and spread holes, three inches apart throughout its length; the driving of the nail spreads these holes to an extent that has the effect of contracting the length of the strap, and tightens

it consequently to a remarkable degree. These straps are furnished, put up on reels of 5000 feet lengths, and are also supplied in bundles of 100 pairs of straps cut in lengths from ¼ inch width by 4 to 12 feet to 7-32 inch width in same lengths, making them adapted to special lines of busisnes. The De Haven Mfg. Co. are engaged in making various similar specialties in the line of box straps, clutch nails, etc., intended for use in stripping, nailing and repairing packing cases, crates, buckets, pails and furniture, catalogues and samples of which will be promptly sent upon application to the factory.

New Window Stop Adjuster.



The Queen Sash Balance Co., No. 150 Nassau Street, New York, are placing on the market a new Window Stop

Adjuster, specially designed to prevent slipping after the stop is set up in its place. It is explained by this company that heretofore "the difficulty with devices of this character has been that, after adjustment, the frame of the window exerts a pressure sufficient to force the stop back, and thus renders it ineffectual." In the Queen Window Stop Adjuster, the cup and the washer, into which the set screw fits, are both corrugated, as shown in the accompanying illustration, and when properly adjusted, cannot slip until the screw is again loosened. The manufacturers call attention to its special application to revolving sashes.

Enterprise New Rotary Beef Shaver, No. 125.

Those who are desirous of the largest obtainable profit from each dollar invested, will be interested in the latest product of genius in money-making-and-saving machines, illustrated herewith. In these days of competing business interests and fastidious customers, it becomes absolutely necessary that every legitimate means be adopted to satisfy the conditions. In its particular field the Enterprise New Beef Shaver, the latest product in its class, combines the good features of all predecessors and corrects all their faults. To butchers, grocers, hotels and restaurants, or

those having to slice any product such as smoked beef, bacon, bologna sausages, ham, cheese, etc., required to be uniformly and rapidly cut into slices, this new machine is the exact thing. It is capable of slicing from one-eighth inch to the thickness of paper, instantly as desired, never produces irregularity in slices, and will cut to almost the

Digitized by Google

end of the piece. Is always ready for use, and with all has a great slicing capacity. Its graceful appearance is partly shown by the illustration. That it is ornamental, substantial and accurate, is assured by the fact that it is manufactured by the Enterprise Mfg. Co , of Pa., Third and Dauphin Streets, Philadelphia, Pa., who will forward, free, information and prices upon request.

The Boston Ice Pick.

A new spring ice pick—the "Boston"—is being placed on the market by John H. Graham & Co., No. 113 Chambers Street, New York. Among the many points of merit

claimed for this handy tool are simplicity, from the fact that it contains few parts carefully put together, and warranted not to break or get out of order with ordinary wear; durability, as the working parts are made of brass or coppered steel, and will not rust or corrode; convenience, because it can be operated with one hand, the point remaining fixed where desired, and thus preventing the scattering of pieces of ice. The handle and head run freely on the rod, and as heavy a blow as required may be given.

Difference Between India Rubber and Gutta Percha.

India rubber is of a soft, gummy nature, not very tenacious, astonishingly elastic.

Gutta percha is fibrous, extremely tenacious, and without much elasticity or flexibility.

India rubber once reduced to a liquid state by heat, appears like tar and is unfit for further use.

Gutta percha may be melted and cooled any number of times without injury for future manufacture.

India rubber coming in contact with oily or fatty substances is soon decomposed and ruined.

Gutta percha is not decomposed by coming in contact with oily or fatty substances.

India rubber is ruined by coming in contact with sulphuric, muriatic, and other acids.

Gutta percha resists the action of these and nearly all acids.

India rubber is a conductor of heat, cold and electricity.

Gutta percha is a non-conductor of heat, cold and electricity.—*The Formulary.*

The monthly meeting of the New England Hardware Dealers' Association will be held at the Revere House, Boston, on the evening of Wednesday, May 11th. The following subjects will be discussed: "Relations of the employer to the employee;" "Vacations; duration and most desirable season for same;" "Leave of absence on account of sickness, length of time allowed on full pay, if any;" "Custom of clerks making special or cut prices to friends. Is this practice general?" The following members are expected to speak upon one or all the topics; Messrs. Loomis, Adams, Janvrin, Thompson of Lowell, Barber, Parlin, Burditt, Morss, Hunter, Wiley and Balkam. Messrs. Mansfield and Van Buskirk will furnish the musical entertainment. The entertainment committee consists of Thomas H. Baldwin, Boston; Byron C. Pierce, Taunton; J. B. Taylor, Waltham.

Douglas & Co., iron and Hardware merchants, Amherst, Nova Scotia, announce that they have associated as a member of their firm, Harold W. Stevens, who was formerly in their employ, and Walter Wood, who has been in charge of their office work. They have enlarged and improved their premises, and intend continuing their business on the same lines as heretofore, giving especial attention to the Hardware trade, in both wholesale and retail branches.

What a Drop of Ink Did.

James Gordon Bennett had a way of appearing in the composing and press rooms of the *New York Herald* at the most unexpected times; and as his visits often resulted in a general "shake up" of the working forces of the paper, they were awaited with fear and trembling by the employees. On one of these occasions, one of the pressmen, an excellent workman who had been there under the elder Bennett, but was somewhat guilty from a lapse of sobriety, had a black eye and was in a quandry as to what excuse he should offer if Mr. Bennett should comment upon it. By a sudden inspiration, he seized an ink roller and daubed some ink on his face, completely covering the discoloration. Presently Mr. Bennett came to the press room, and, with the foreman, Mr. Hays, went through the room, commenting on every detail and looking very sharply at every employee. When about to leave, he pointed suddenly to the inky pressman, and said, "Mr. Hays, what is that man's name?" The man quaked in his shoes until Mr. Bennett said slowly, "I want you to give that man three dollars a week more wages. He is the only man in the room who looks as if he had been working."

Alder & Boyd have located at No. 37 Warren Street, as manufacturers' representatives. The members of this firm are Benjamin S. Alder, formerly with J. C. McCarty & Co., and Andrew Z. Boyd, formerly with the Whitman & Barnes Mfg. Co. In announcing this to the trade, these gentlemen say: "It will be our aim to carry a complete line of samples, catalogues and price lists for the benefit of the New York jobbers and export commission merchants. Our quotations will be the manufacturers' selling prices. Our experience of twenty-two and fifteen years respectively will be a guarantee of the quality of goods we shall represent. We consider it our most pleasant duty to thank our customers for their patronage of the past."

The annual meeting of the stockholders of the Joseph Dixon Crucible Co. was held at the company's main office, Jersey City, N. J., on Monday, April 18th, and out of a possible vote of 7345 shares, there were 7042 shares voted for the re-election of the old board, consisting of Edward F. C. Young, John A. Walker, Daniel T. Hoag, Richard Butler, William Murray, Alexander T. McGill and Joseph D. Bedle. President, E. F. C. Young; vice-president and treasurer, John A. Walker, and secretary, Geo. E. Long were re-elected by the directors, Judge Joseph D. Bedle was also re-elected as counsel.

Herr Frederick Alfred Krupp is the largest employer of labor in the world. On the payrolls of the great Krupp establishment are more than 25,000 men. They are employed in making cannon and other munitions of war. Thirty-four governments have made purchases there, and this means that more than 25,000 guns of various sizes have been frowning on mankind in the name of peace and civilization.—*Industrial World.*

W. R. Russell & Co., manufacturers of the Royal Metaline Polish, whose factory and offices at No. 2 Burling Slip, New York, were recently destroyed by fire, have secured new offices in the John Wolfe Building, No. 66 Maiden Lane. Their factory will be away from the offices, the location not being yet chosen.

A. W. Douglas, secretary of the Simmonds Hardware Co., St. Louis, Mo., was in the city recently. He reports good business in the West, despite the uncertainty created by war talk.

It is not so much what he takes in as what he digests that makes a man strong in business practice.—*Exchange.*

Digitized by Google

Review of the Markets.

Hardware: The war conditions, which form the staple substance of everyone's daily thoughts and discussion, have kept the full business which is always expected in the month of May, from becoming the important feature of the anticipated Spring trade. The volume of business is fairly good, but by no means extraordinary, the Western demand keeping up very satisfactorily, while the business along the Coast and in the Eastern States, has never advanced from the sluggishness manifested so far this season as its prominent characteristic. With few exceptions prices remain quite steady. The belief is rife that if the war with Spain should prove of short duration, our Fall trade will become a phenomenal one. Collections so far this season are reported as being unusually good.

Wire Nails: The old stocks in the hands of the leading dealers seem not yet exhausted, and the current demands of the large trade are of a very moderate character. Prices seem to have touched a satisfactorily low rate, and any inclination toward lower quotations is not noticeable. A number of mills of limited production closing down would indicate present profits as being extremely light, the feeling between competing mills not being of an aggressive character. While large buyers with good sized specifications are still able to place them at $1.30 at mill, the market price for carload lots is represented more fully by $1.35 at mill. New York prices are: Carload lots on dock, $1.45 to $1.50; smaller lots from store, $1.55 to $1.60.

Cut Nails: The business in this staple line has been but moderate for some time, and present quotations may justly be regarded as sufficiently low to induce a larger business than is apparent. New York prices are represented by the following: Carload lots on dock, $1.17½@$1.20: smaller lots from store, $1.25@$1.30.

Builders' Hardware: The volume of trade in this diversified line of business is gradually assuming an importance very gratifying to the makers thereof. The stocks throughout the country are by no means large, and the tendency of the trade is to gradually increase them by carrying an average assortment in which the latest styles of design and finishes shall be found well represented.

Binder Twine: The placing of some of the larger orders which have been held back for trade developments, has made the market a much firmer one, and prices have advanced at Eastern factories ¼ cent a pound. Quotations for carload lots are represented by the base price of 6¼ cents per pound for sisal and 7¼ cents for manila, 550 feet to the pound, smaller quantities being held at ½ cent a pound advance on these prices.

Cordage: An increasing demand and improving conditions affecting supply of material have made an advancing market, the base price for carload lots being represented by, manila, 7-16 and larger, 6¾ cents, and sisal, corresponding sizes, 6 cents per pound; other sizes at the customary differences. Smaller quantities are quoted at the usual ¼ cent a pound advance on above prices.

Linseed Oil: The Dean Linseed Oil Co., No. 181 Front Street, New York, quote as follows: In lots of less than 5 barrels, 43 cents per gallon; in lots of 5 barrels or more, 42 cents per gallon. The 5-barrel price only applies to deliveries of that quantity at one time. Boiled linseed oil, 2 cents per gallon higher than raw. Calcutta oil, 54 cents per gallon. Above prices are subject to change without notice.

THE DAVENPORT TRADE.

Money is in good demand at slightly higher rate of interest. Amount of bank deposits practically unchanged. Bank clearances show a large increase of business, as compared with last year at this time.

The demand for army supplies incident to the American-Spanish war has very largely increased the output at the United States arsenal here. By the time this is in print there will be employed not less than fifteen hundred men, which means an addition to the usual force of fully one thousand mechanics, of whom there are probably seven or eight hundred newcomers, increasing the population of this neighborhood on account of extra help at the arsenal alone fully two or three thousand people. The work that is shipped daily from the arsenal amounts to six or eight carloads, and comprises caissons, gun carriages, haversacks, blanket bags, saddle cloths, saddle bags, gauntlets, waterproof canvas coats, girths, cartridge pouches, cart belts, Springfield rifles, canteens, frying pans, tin cups, cannons, artillery harness, etc., etc., etc.

The demand for some lines of goods is greater than the supply, notably some of the best brands of barb wire, smooth fence wire, auger and auger bits, poultry netting, garden rakes, rope, field fencing and solder.

Many of the wire nail mills have shut down, and as soon as this is known there will probably be a sudden demand for speculative stocks.

Some of the manufacturers have withdrawn all prices on rope on account of the precarious condition of the manila and sisal fibre market. Stocks are light.

The amount of sales for April compare favorably with sales for same month in 1897, but the increase of sales does not carry with it a corresponding increase of profits. The rule is getting to be large sales regardless of profits. Collections are satisfactory, with no failures to report from here.

SICKELS, PRESTON & NUTTING CO.

THE COLUMBUS TRADE.

Business still continues good, and we think our experience is the same as other jobbers with reference to the difficulty in getting seasonable goods promptly. The demand for some lines is far in excess of the output of the manufacturers. We are just in receipt of a letter from a large manufacturer apologizing for delay in shipping goods, and giving as a reason that nine of their most important men had enlisted and gone to help wipe the Spanish out of existence. It is our opinion that about one more such victory achieved at Manila will end the war. We trust we will be successful in the next engagement, and then have peace.

Some goods have taken a decided advance, especially metals and rope. The price of smooth fence wire is firmer since May 1st. Manufacturers can sell more than they can make, and no doubt think it a good time to get better prices.

Our city is the centre of attraction at present, as we have about nine thousand soldiers here. They are a fine looking body of men and youths. A great many of the State militia are under age, but they will make good soldiers if they are sent to the front.

The weather is favorable for vegetation, and prospects could hardly be better for an abundant harvest.

SMITH BROS. HARDWARE CO.

THE OMAHA TRADE.

Trade is moving along in remarkably even channels, still showing a noticeable improvement over the corresponding periods of a year ago. While in some places complaint is made that business has been affected by the war scare, it does not appear to have reached this locality, and no ill effects whatever have been noticed.

A feature of business is the unusual demand for barbed wire, mostly from the cattle ranges in the western part of the State, and this must be taken as a healthy indication of this great industry. Some scarcity has been noticed in the supply of season goods, notably, poultry netting and steel goods, and the demand for spring goods has been quite above the average.

The near approach of the opening of our Exposition makes considerable stir and improvement in local trade,

Digitized by Google

and unless present expectations, from some untoward cause, fail to be realized, the gates will swing open at the time set and it is the opinion of competent judges who have had experience in these things, that the display will exceed in many respects, anything that has ever been undertaken in this line, not excepting the World's Fair. Collections are good. RECTOR & WILHELMY CO.

THE CHICAGO TRADE.

We have not had time during the past month to write our usual letter, for the very good reason that it has taken all of our time to keep our different stocks in condition and fill our orders.

Business is much better than last year at this time. Customers are paying promptly, and are well pleased with prospects for a fine trade throughout the Spring months.

Consumers in the country should certainly feel most liberally disposed to make purchases and pay up, as grain, cattle, horses, hogs and other farm products are booming in price.

Many other lines of merchandise, such as clothing, groceries, dry goods and drugs are advancing, but we are still selling Hardware at about the lowest figures known.

There seems to be an enormous demand for plain and barbed wire, steel goods, poultry netting, lawn mowers, farming tools, wire cloth and window screens.

With the early closing of our war with Spain in prospect, we shall, no doubt, give manufacturers the largest business they have had any time in ten years.

WELLS & NELLEGAR CO.

THE ST. PAUL TRADE.

The weather, this Spring, has been very seasonable for all kinds of farm work. The seed is now well in the ground, and the ground is in good condition for it to grow.

The war, and other causes, have stimulated the price of all farm products, and the farmer is in a more prosperous condition, and is looking forward to better prospects than at any time during several years past.

As a consequence, the retail merchant is busy, for his customers are paying their accounts, and making new purchases freely.

Great activity in building is reported both in the country and city, and altogether, it looks as though prosperity was advancing with reasonably rapid strides.

But you say, "How about the war?" We see four thousand young men who, ten days ago, were peacefully pursuing their several vocations at their homes throughout the State, now in camp within our city limits, more or less industriously drilling and fitting themselves to be soldiers. One hundred and odd thousand young men are gathered in various other States throughout our country, also drilling, and dreaming of fame to be won at the cannon's mouth.

What effect does all this have on business? Aside from the slight derangement occasioned by taking some men away from their places, as far as the writer's observation extends, it has no appreciable effect. Newspapers sell somewhat more freely, and loafers hang around bulletin boards instead of walking up and down the streets. Business goes on as usual. People continue to "buy and sell and get gain," (or try to) to build, manufacture, dig, plant, etc., ete.

Alll things considered, we think we can safely predict for this great Northwest, rich in resources, and for which nature has done so much, a prosperous time for the closing years of the century.

C. W. HACKETT HARDWARE CO.

THE PITTSBURG TRADE.

There has been a decided lull in the jobbing trade during the past ten days, which is rather disappointing, as we looked for good brisk trade this spring. The cause is not far to seek. War excitement and uncertainty is the trouble. The weather during April was also a drawback, as it was more like our usual March weather, while March was mild, and trade that would have been deferred was crowded into the earlier month.

It is quite a problem to decide the probable effect of the war on prices of Hardware. Unless it reaches much larger proportions than at present, we cannot see that iron and steel will be much affected, but items like manilla rope and lead goods have felt the pressure already.

We sent off two of our young men last week with the soldier boys, but trust the naval forces may settle things before they are needed for actual battle.

The plate glass makers gave us a surprise by getting together and making a sharp advance in price of their product, which has been sold at cost for some time past. Our mills are all generally well employed on contracts taken early in the year, which are allowed to stand. Makers of projectiles for government orders are running to full capacity seven days in the week.

LOGAN-GREGG HARDWARE CO.

THE BOSTON TRADE.

We learn that the spectre of war has produced a sensible depression in almost every line of business, and reports from some of our manufacturing towns at the present writing are far from encouraging.

It is to be regretted that just as business was assuming its normal condition, prices becoming more steady, collections gaining, that this barrier should present itself, which, although may be exaggerated as regards the result, yet has had an unhealthy influence which is difficult to overcome.

Between the war and unseasonable weather, certain lines which otherwise would be in good demand are laid upon the shelf, only to be brought out as the advance of the season forces their purchase.

The news of the past few days has led to a feeling of security, and it is firmly believed that it is now only a question of time when we shall see business back to a promising outlook. FRYE, PHIPPS & CO.

THE CLEVELAND TRADE.

Comity in trade which would make business life more pleasant, is a subject that trade organizations might profitably consider. Competitors are not necessarily enemies. I suspect that our old theological convictions of total depravity have much to do in forming opinions of our business associates, and perhaps it is influenced by our contact with customers, but we must not forget the important fact that ideals improve with improved conditions. "Smartness" that is thought to be "cute" in the earlier stages would not be permitted in a business house of character. The fact that a house has attained standing in business is evidence of this.

Human nature is not totally corrupt; a large proportion of men are honest; if this were not so it would be impossible to do business, and those who act on a different theory are chronic pessimists. They prefer to suspect and to impute dishonest motives. They are scavengers after meanness; they may find reasons in themselves, but it is blasphemy and libelous to apply it to the mass of business men.

Self-interest compels integrity in business life, and to suspect that everybody is a cheat, disqualifies a man for business. Manliness forbids our assuming dishonest motives without evidence. The man who does so characterizes himself. Letters written imputing dishonesty tend to disgrace the writer. Such letters shadow the life of business men and would bring despair only that the great majority of men, by their nobleness, modify the influence.

To suppose that the house you deal with intends to treat you honorably is the true normal attitude, and to expect that until you are compelled to think differently, is the manly method.

Digitized by Google

To write a business man what you would not say to him is cowardly. Every word in a letter should be carefully considered if blame is to be imputed, as antagonism hinders success. Show that you expect fair treatment, and you are likely to get it; to write a letter in anger puts you to disadvantage.

Much of the ill feeling would be avoided if ungentlemanly letters were never written, and everybody would be better served. Being a customer of a house does not justify impudence, but being a gentleman insures gentlemanly treatment.

Now that the war is upon us, let revenue enouge be collected to pay as we go, so that when it is over, we can forget it. The channels of business will be changed; millionares will be increased and poverty not removed.

April has proved a good business month and we may anticipate that the movement will not altogether stop. We shall see what we shall see for the future.

THE LOCKWOOD-TAYLOR HARDWARE CO.

A new solid petroleum fuel has been invented by George H. Fullerton, which he has perfected after several years of experimenting. By the use of certain chemicals and peculiar treatment of the crude petroleum, Mr. Fullerton makes a solid mass, very black, which in some forms breaks almost with a fracture. It burns just as coal burns, does not fuse or run, gives out not so much smoke as ordinary coal, costs at present price of oil less than $5 a ton, and gives out between two and three times the heat units that the same weight of the best coal will give. The material may be made into any form of brick, is much cleaner than coal in handling, has comparatively little of the petroleum odor; it can be stored in the sun without fusing or melting, and in other ways is a marked advance in the preparation of fuel materials for use. A substance of this kind could be used for heating purposes where oil and gas are used now.

The invention of an expanding auger, by which a hole may be bored larger at the bottom than at the top, was for a long time thought impossible, but it has been successfully accomplished, and has simplified many of the operations of building and other systems of construction. As the auger enters the wood a movable side bit or cutter is forced outward from the bottom of the cut by turning a thumbscrew on the body or stem of the borer. Thus the hole may be made a third larger at the bottom than at the top if wished. The advantages of this are apparent. In securely fastening the tenon or piece which enters the hole all that is necessary is simply to "check" its end and insert or merely start a wedge. In driving the piece home the wedge strikes the enlarged bottom of the mortise or bore and expands the entering piece to a complete and watertight jointure.

Beggars' Papers.

At the present day every trade must have its paper, but it is not every trade that has a daily paper devoted exclusively to its interest. The beggars of Paris can boast that they are thus favored. The Parisian beggars, who according to a writer in *Household Words*, number about eight thousand, have two daily papers. One of these is entitled the *Bon Guide*. It gives a complete list of the baptisms, weddings and funerals to take place on that day, so that they may be well posted as to the best places to pursue their calling. For begging-letter writers there is a list of the addresses, arrivals and departures of persons of known charitable disposition. The paper is a mine of information to its readers. The *Beggars' Journal* is not so "high class," but it is perhaps more interesting. It prides itself on the exclusiveness of its information. It is unique in form, being written, and not printed, on the coarse brownywhite paper used by grocers to wrap sugar. Its advertisement columns are suggestive. "Wanted, a blind man to play the flute. Apply, the editor." "Wanted for a fashionable watering place, a one-armed man, good references, security required." This paper contains, like the other, notices of births, deaths and marriages in high circles. It does not boast of a very large staff; for the editor, who is also sole proprietor, writes out the single copy of the paper, and takes it round every morning to each of his subscribers, who have the privilege of looking over this unique journal for a few minutes by paying the munificent sum of eight cents a month.

At the end of 1896 there were 916 electric roads in the United States and 30 in Canada, representing 12,133 and 450 miles of track, respectively. At the end of last October there were 953 electric roads and 13,765 miles of track in the United States, and 32 roads and 498 miles of track in Canada; figures which represent an increase of 13.4 per cent. and 10.1 per cent., respectively, in the total mileages of track. The mileage of cable lines in the United States has declined 10 per cent., from 599 to 540 miles; while the mileage of horse lines has decreased from 1219 to 947, or as much as 22 per cent. There are now 20,659 motor cars on electric railways in the United States.

The Berlin Iron Bridge Co., East Bèrlin, Conn., have in Section L., on the main floor of the Electrical Exhibition now open at Madison Square Garden, New York, a steel building, showing the construction of their Patent Anti-condensation Corrugated Iron Roof Covering, which is absolutely fireproof and is guaranteed not to drip or condense moisture on the underside.

Every housekeeper in America knows Enameline.

Makers of Great Guns.

The city of Essen is located in the centre of a high valley, which abounds in coal and iron ore, and the digging for both and the melting of the ore and casting the metal into ingots and rolling it into balls have been the occupations of the inhabitants for centuries past. Friedrich Krupp, the founder of the great works bearing his name, was born in 1787, and when crucible cast steel was first being introduced into England and its first importation from there into Germany had been made impossible through the edict of Napoleon called "the continental sperre."

F. Krupp began to produce crucible steel, first in small quantities for files, stamps, rolls for coins and shears, but only slowly could he convince and persuade German manufacturers to use his cast steel, and after a life full of disappointments and hardships he died in 1826, after a long and severe illness, leaving to his son Alfred little else than the old homestead, which still stands in the midst of the great works, and the secret of his invention.

Alfred Krupp's energy and enterprise soon conquered. His first success was to be able to furnish cast steel of varying degrees of hardness, thereby increasing its adaptability for many new purposes. Next came the invention of the weldless car-wheel tires, which were patented in 1853 in all countries, and furnished him capital for enlarging his plant. In 1865 he interested himself in coal mines, iron ore mines and furnaces, which should furnish the material for his own works, and in 1867 he began to reap the harvest from his experiments inaugurated long since with steel cannons.

Since then the success of these works and their growth have been phenomenal, and when Alfred Krupp closed the busy and successful and philanthropic work of his life, in 1887, at Villa Huegel, his princely home on the side hills of the valley of the Buhr, the city of Essen, in recognition of this great work, erected in his memory a beautiful monument on the most prominent square of the city, and deputations from many nations mourned at his grave.

Essen is a city of 96,000 inhabitants, and over 20,000 of this population are employed in the works of the able and energetic son of Alfred Krupp, Friedrich Alfred. Over 1200 acres of ground are covered with buildings and machinery. Many coal mines furnish fuel for the works, over 400 iron ore mines furnish the metal, and large iron ore deposits in Spain, near Bilbao, have been purchased in addition, and a special fleet of steamers has been built which bring over 300,000 tons of this Spanish iron ore from Spain to the German coast and up the Rhine. Twenty furnaces at Duisburg and Neuwied-on-the-Rhine are reducing this ore for the Krupp works, and are owned or controlled by them.

The main street of Essen divides the Krupp works into two parts, connected overhead with innumerable mammoth steam pipes and bridges, and parallel with it, running east and west, the tracks of the Rhenish Railway pass the works in the north, while in the south the railroad leading from Dusseldorf to Bremen, Hamburg and Berlin skirts the mill. Innumerable tracks connect these two main lines of railroad, surrounding in an inextricable network the buildings and crossing the street leading to Muelheim below its level.

Powerful locomotives bring trainloads of raw material into the yards and leave the works with valuable products, finished and ready for shipment to all parts of the globe. Miniature engines and cars move about between the buildings on narrow gauge tracks, bringing material of smaller size from one building to another until it is finished and ready for the market.—*Baltimore Sun.*

Recent tests of 5427 gas meters at Syracuse, N. Y., showed that 1744 ran from 1 to 18 per cent. fast; 3035 from 1 to 32 per cent. slow; 616 were classed as correct, showing less than 1 per cent. variation; 616 failed to register, and 1 would not pass gas. Most of the meters running either fast or slow showed variations of 5 per cent. or less, and only 31 meters out of 1744 ran more than 7 per cent. fast. The average excess of registration for all the fast meters was 2½ per cent. and for the slow 3¼ per cent. The tests were made by T. Littlehales of Syracuse, who states that in all his previous experience he had scarcely ever found a meter running over 8 per cent. fast. The poor registration at Syracuse he attributes largely to the use of old meters of a defective type.

A telegram from the War Department was received by the Pennsylvania Railroad recently stating that Major-Gen. Miles wanted to know how many pieces are in a class "L" locomotive, the standard type. Counting each individual piece, even to the rivets and bolts, but not the nails in the cab and tender, there were in all 21,006 pieces. It is conjectured that Gen. Miles wants to make a comparison of some sort between a locomotive and a disappearing gun carriage.—*Stoves and Hardware Reporter.*

The wheels of two college professors collided. The less injured remarked that it was a beutiful evening for astronomical research; while the other scraped the gravel out of his hair and pockets, and said that geological investigation was a particular hobby of his.—*The Bicycling World.*

Street-car crossings in Paris, being absolutely on a grade with the paving, are not the terrors that they prove to be in many American cities.—*The Bicycling World.*

"I love the ground you walk on;"
This was the tale he told.
They lived up by the Klondike
And the ground was full of gold.

Suppose you could follow your customers into their homes and, without intruding, say a good word for yourself—would that help your business?

Instead of going yourself, suppose you sent a representative and he talked against you all the time—would that injure your business?

Every length of Garden Hose is somebody's representative. If it is the right kind—strong and lasting—every time it's used the seller is pleasantly remembered. Unconsciously the impression soaks into the household that he is a safe man to buy from—hose and everything else.

Poor, cheap hose makes exactly the opposite impression. You can't select a surer way to drive customers from your door than sell them a length of cheap hose. Can any one afford to advertise his store as a good place to buy leaks and bursts, and other kinds of trouble?

Every length of our hose is a trade maker, working silently and steadily in somebody's interest—yours if you sell it. **There are ten grades, and every one a good honest worker --rubber the finest, duck the strongest.** Send for samples, prices and booklet. . . . .

The Truth, and Nothing But the Truth.

Two rival commercial travelers were trying to sell a merchant a fire-proof safe.

The first said to the merchant:

"A cat was put in one of our safes, and the safe was put in the middle of a fire for twenty-four hours, and afterwards the cat came out alive."

Said the second:

"We put a cat in one of our safes and piled a fire round it for a week and when we opened it the cat was dead."

"Ah, I thought so," said the merchant.

"Yes," replied the traveler, "he was frozen to death!"

Sixty-three per cent. of the population of New York State is included in the forty-one incorporated cities and 37 per cent. only in the villages and towns. The latter, however, have a majority, under the present apportionment, of representatives in both branches of the Legislature, and will continue to have until the Constitution is amended in this particular.—*N. Y. Sun.*

When a man loses his balance, it makes a great difference whether it was in a bank or on a bicycle.—*L. A. W. Bulletin.*

Daniel Boone's Old Gun.

"Uncle Mart" Russell, of Milledgeville, Ky., has an old flintlock rifle that belonged to Daniel Boone when he came to Kentucky in May, 1769. He bought the gun from William Wreckes, one of Boone's men who settled near Campbellsville. That was exactly fifty years ago. The barrel measures four feet one inch, and the entire gun six feet two inches. It was with this gun that Boone helped to kill the 2300 deer, whose skins were *cached* in the mountains of Kentucky while the pioneers went back to Virginia for more ammunition and supplies. When they returned a few months later they found that the Indians had been there before them and stolen and destroyed the entire lot of skins. One of the party carved on a tree near by this laconic account of their misfortune: "2300 deer skins lost. Ruination, by God."

Russell says the old gun shoots so true that when he tries to miss a target or a squirrel, the gun invariably drives centre whether he wants it to or not.

It is announced that the company heretofore known as the Knapp & Spalding Co., Sioux City, Iowa, has changed its title and will be known hereafter as Knapp & Spencer Co. The officers and the management remain the same as for the past four years, no change being made except in the title.

A glassmaker is experimentally flaking thick glass to see if a very keen edge cannot be produced that will answer for all purposes for which a razor is used, his action being suggested by the fact that in the far East bits of broken glass are used for shaving with.

The railway metals between London and Edinburgh, a distance of 400 miles, are 200 yards longer in summer than they are in winter. This is owing to the expansion caused by the extra heat.—*Exchange.*

Universal Spoke Shave.

Has two detachable bottoms, adapting it equally well to circular work or straight; and, by means of a movable width-gauge, can be used in rabbeting. Either handle can be screwed into a socket on top of the stock, thus enabling the owner to work into corners, or panels.

No. 67. Spoke Shave, for curved or straight work, $1.50

Feather Lamp Shades.

The latest novelty in the way of a lamp shade is made out of the soft smooth-lying under feathers taken from the breast and head of large birds. These shades are not intended to screen the entire flame. They are set on one side of the glass globe and are about as big as a very full moon, or an oval moon, if that shape is liked better. An owl shade for a reading lamp is made of the gray and white mottled feathers of the ordinary gray owl, and is designed in the exact likeness of the owl's head. The short curved beak, the prominent eyes, with their rimmed circles, and the upstanding ears are all reproduced. Such a shade costs $2.75. One representing a white owl's head is sold for fifty cents more, owing to the scarcity of the white owl.

There are cheaper feather shades, made from dyed feathers put together in stereotyped patterns, and there are rare and delicate shades contrived of rich-tinted bird of paradise feathers, and the blended hues that hint of the peafowl's plumage. The sober grays and pale browns and shaded wood tints of the hawk and the heron are most sought for, but the bright colored feathers make an effective shade for a drawing room lamp or for one used in a room requiring gay colors. Tiny candle shades scarcely larger than a sea shell and prettily curved are also made of feathers, and the effect is novel and pretty. In all cases the back of the feather shade is covered with silk of neutral tint. These novelties are neither heavy in weight nor heavy to look at, and are rather a relief from the muffled and bordered, gimped, and fluted paper and lamp shades so much used.—*New York Sun.*

The F. J. Titus Co., are about to purchase the bicycle business of C. J. Stebbins, No. 103 Reade Street, New York. This company was incorporated January, 1896, and while using the Reade Street store for wholesale, will continue their two branches at No. 469 Boulevard, New York, and No. 73 St. Marks Avenue, Brooklyn, for retailing and repairing. Although Mr. Stebbins is president of the company, he will not interest himself in its active management, but will give his whole attention to his interests in the nail business, with which he has been identified for many years; which he plans to extend largely in the future.

The partnership formerly existing under the name of Temple & Lockwood having expired by its own limitation, Edward A. Temple will give his attention entirely to steel and iron products, forgings, steel castings, sheets, plates and shafting, his headquarters being in the Woodbridge building, No. 100 William Street, New York. Arthur Lockwood, of the same firm, will continue as usual at the old location, No. 12 Platt Street, and will make all the settlements connected with the business.

Farwell, Ozmun, Kirk & Co., St. Paul, Minn., have recently issued a very attractive catalogue consisting of 128 large-sized pages, giving prices and illustrations of guns, rifles, revolvers, ammunition of every kind, cartridges, caps, wads, etc., gun material and sporting goods generally.

The Whiten Machine Co., Whitinsville, Mass., have just completed a new casting shop which will be entirely fireproof. It is furnished by the Berlin Iron Bridge Co., East Berlin, Conn.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Alpena, Mich.—Ash, Eller & Co., Hardware, have commenced business in the store formerly occupied by Ash Bros. on Chisholm Street.

Batavia, Ill.—The Batavia Hardware Co. has been incorporated by John Barckley, William E. Forbes and John W. Jeffrey. Capital stock, $2500.

Berry, Ill. — G. W. Hinpan and John Seigle, Hardware, will open a new store.

Colorado Springs, Colo.— Articles of incorporation for the Mays Hardware Co. have been filed with the county clerk. The company is capitalized at $50,000. The company will do a general business, operating at Cripple Creek.

Columbus Grove, Ohio.—Palmer & Lippincott, Hardware, will open a new store in the near future.

Detroit, Mich.—The Hoffman Hardware Co. have opened new store corner of Gratiot Avenue and Russell Street.

Janesville, Ohio. — H. L. McNamara, Hardware, has opened new store.

Lawrenceville, Ill.—A. M. Fyffe & Co., a new Hardware firm, have opened for business in the Watts Block.

Lynchburg, Va.—Bean & Holt, Hardware and furniture, will shortly move into new store which is now being erected.

Nashville, Mich.—Mitchell & Young.

Nelson, Minn.—H. C. Peterson, Hardware, is laying the foundation for his new store, which, when completed, will be opened as a first-class Hardware store.

Terre Haute, Ind.—J. P. Siner, Hardware, will open a new store.

Waupaca, Wis.—E. C. Williams, Hardware, will open a new store.

Yale, Mich.—John Hutton & Co., Hardware, have commenced business.

Changes and Improvements.

Aberdeen, Md.—J. A. Wiles has built an addition to his Hardware store.

Altamont, Mo.—F. H. Owings, Hardware, etc., sold to M. H. Bird.

Barrytown, Mich.—S. S. Wilson, Hardware, succeeded by Wilson, Geiger & Co.

Bay City, Mich.—The Jennison Hardware Co. is doubling the size of its building on the dock at the foot of Fifth Avenue.

Bloomville, Ohio.—Albert Prouse and son have bought George W. Moore's Hardware store, and George W. Moore will move to Tiffin and start a Hardware store there.

Burlington, Vt.—J. M. Ashley has resigned his position with the John A. Manson Hardware Co. and will remove to Swanton to become head clerk for the Wead Hardware Co.

Canonsburg, Pa. — Munnell & Young, Hardware, succeeded by Samuel Munnell, Sr.

Cedar Bluffs, Neb.—Elt Marquis has disposed of his Hardware store.

Cheboygan, Mich.—J. E. Cueny & Co., Hardware merchants, have dissolved partnership. J. E. Cueny will carry on the business.

Dillon, Mont.—R. T. Wing has sold his interest in the Dart Hardware Co. to Arthur Connelly and J. G. Shannon.

Embarrass, Wis.—Krueger Bros., Hardware, etc., succeeded by J. A. Adams.

Farmington, Me.—Walter S. Smith has bought a half-interest in the Hardware firm of W. G. Gagne on Broadway. The new concern will be styled Gagne & Smith.

German Valley, Ill.—C. F. Borchers intends moving his Hardware store to Iowa this fall.

Huntington, Ind.—Dickover & Altman, Hardware, succeeded by Smith & Dickman.

Lansing, Mich.—The Dunham Hardware & Implement Co. have rented the store now occupied by H. M. Southworth on Franklin Street, and it will be used as a carriage and implement salesroom. Mr. Southworth will soon remove his Hardware stock to No. 723 Turner Street, into a store which is now being remodeled for his use.

Leeds, N. D.— Madson & Thompson, Hardware, etc., reported to have dissolved partnership.

SPECIALTIES IN MALLEABLE IRON OR COMPOSITION

"Has Our Esteemed Favor."

Edward Darby & Sons, Philadelphia, Pa. [*Wire Goods*]: For the past few years we have been in HARDWARE, and we beg to remind you that it has our esteemed favor, and will recommend the same to anyone desirous of a good, useful, common-sense trade journal such as HARDWARE is.

Y&T

CUTS ONE THIRD SIZE.

No. 42.

The case, 2⅝×3½ inches, is of iron, old copper finish, and the cylinder, bolt and knob of polished bronze. It is adapted to doors of either hand and of any thickness.

The Yale Rim Night Latch

was at once accepted, when first introduced in 1867, as the best and most secure lock on the market; it is now admittedly the standard of excellence not only in America but throughout the world; it has many would-be competitors, but in its latest form, and with the PARACENTRIC KEY, it has no equal and easily outranks all other night latches in security and popularity.

A supply of folders descriptive of this lock and our less expensive lock of the same type (the No. 22), will be furnished to our Trade Customers on request. The name and address of this Company will not appear on them.

The Yale and Towne Manufacturing Company.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over are requested to contribute to this page News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Batavia, Ill.—Batavia Hardware Co.; capital, $2500. Incorporators, John Barckley, Wm. E. Forbes and John W. Jeffrey.

Birmingham, Ala.—The Southern Bolt Co. has been incorporated by John M. Caldwell and others, with a capital stock of $30,000.

Courtland, N. Y.—The Courtland Howe Ventilating Stove Co. has been incorporated by John H. Clarke and others. Capital stock, $25,000.

Dallas, Tex.—The Central Hardware Co. has been incorporated by T. C. Lewis, J. R. Hunter and W. B. Greenlow. Capital stock, $1000.

Denver, Col.—Dillon Hardware Co. has been incorporated by John J. Dillon, Chas. C. Eichelberger and John Murphy, with a capital stock of $40,000, to manufacture Hardware specialties.

Detroit, Mich.—The Ideal Mfg. Co. and the Electric Gas Stove Co. have been consolidated into the Ideal Mfg. Co.; capital stock, $250,000. The Ideal Co. has been a manufacturer of plumbers' supplies and cast iron toys. It employed from 300 to 400 hands. The new company will also manufacture electric gas heating stoves, ranges, broilers, gas grates and gas water heaters of the Electric Gas Stove Co. The business will be carried on at the old site, Franklin and Dubois Streets, running back several hundred feet to the railroad. The officers are: President. James N. Wright; vice-president, Hiram T. Bush; secretary, Frank T. Dwyer; treasurer, John H. Bissell.

Detroit, Mich.—The Star Heater Co. has been incorporated, with a capital stock of $5000.

Dresden, Ohio.—The Dresden Iron & Sheet Steel Co. has been incorporated with a capital stock of $100,000.

East St. Louis, Mo.—A company was organized April 22nd, which will put in operation a wire and nail mill at Bridge Street and the Belt Railroad, in Winstanley Park. The company have let the contract for the buildings to Wm. Wiemer of Belleville, and excavation for the foundations began at once. The company also had Messrs. Renshaw arrange for their water supply and the mill will be put into operation as soon as possible, and will require a force of between fifty and seventy-five men. This will give employment to a number of East St. Louis people. The Belt Line Railroad has begun on the switch to the mill. This enterprise will be quite an addition to Winstanley, and will no doubt be heartily received by the citizens of that place.

Fremont, Ohio.—The Sprague Cutlery Co. has been incorporated by Samuel Brinkerhoff, Clarence W. Sprague, Albert V. Bauman, O. H. Jackson and Frank Hein. Capital stock, $100,000.

Green Farms, Conn.—John L. Alvord has formed a company to engage in the manufacture of cutlery. They are fitting up a factory in Bridgeport.

Iowa Park, Texas.—Iowa Park Implement Co. has been incorporated by D. C. Kalp, Sr, E. P. Kalp and D.C. Kalp. Capital stock, $5000.

Montreal, Can.—The Montreal Hardware Mfg. Co. has been incorporated by Telesphore Sicotte, Armand Gedeon Yon, Marie Louise Sicotte, Charles Emile Delorme and Gustave M. Delorme. Capital stock, $20,000.

New Orleans, La.—The Hawley Down Draft Furnace Co., of Louisiana, limited, has been incorporated by John H. Murphy, John S. Rainey, H. Chapman, J. M. Brugneires and others, for the manufacture of the Hawley down-draft furnaces in Louisiana and Mississippi, etc. Capital stock, $100,000.

Pittsburg, Pa.—The Walters Stove Co., is to become incorporated, with the following incorporators: Charles A. and Charles W. Walters, John Hagmaier and Stephen A. Bright.

Salt Lake City, Utah.—The Silver Bros. Iron Works have been incorporated to manufacture machinery, etc.

Spokane, Ill.—The Spokane Implement Co. has been incorporated by C. S. Brantingham, W. H. Parlin and H. K. Wolcott. Capital stock, $12,000.

York, Pa.—The York Steam Heating Co. has been incorporated, with a capital stock of $1000.

Changes and Improvements.

Bridgeport, Conn. — Ground has been broken for two large additions to Wilmot & Hobbs. They will be three stories in height. One will be 133 feet by 76 feet and the other 90 feet by 60 feet.

Buchanan, Mich.—The Michigan Cutlery Co. are removing their plant employing 150 men, to Fremont, Ohio, where stock in the concern has been secured.

Chicago, Ill.—The McMullen Woven Wire Fence Co. have certified to a change of name to the McMullen Fence Co.; also change of location of principal business office to Evanston.

Harrisburg, Pa.—The Lalance & Grosjean Mfg. Co. will build a new building at their works. It will be 80x70 feet, and a new annealing furnace will be installed.

Lebanon, Pa.—The Pennsylvania Bolt & Nut Works, have completed arrangements for building a large extension to their plant.

Louisville, Ky.—The proposed removal of the Superior Horse Nail Co. of Kankakee, Ill., to this city, is assuming definite shape.

Peoria, Ill.—The Culter & Proctor Stove Co. took out a permit recently for the erection of a three-story brick warehouse on the lot next the foundry on North Water Street. It will cost complete $3900.

Springfield, Mass.—The Springfield Drop Forging Co. have decided to greatly increase their works at Brightwood, Mass., and will erect a new building.

St. Charles, Ill.—Ground has been broken for an addition 80x150 feet to the Moline Malleable Iron Works.

St. Paul, Minn.—Judge Kelly has granted leave to C. M. Power, assignee of the St. Paul Plow Works, to go on with the business of the company for the coming three months. The plow company have a large number of orders which is found desirable to fill, and the Court was satisfied, on the showing of the assignee, that he had been conducting the business of the company with much descretion and with profit to the creditors.

Windsor, Conn. — The Spencer Automatic Machine Screw Co. have moved to Hartford.

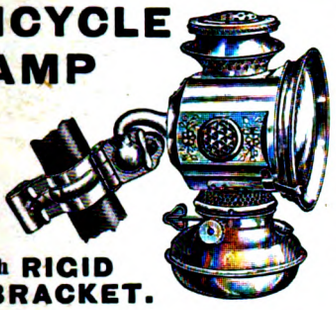
Recent Embarrassments.

Monmouth, Ill.—The Weir Plow Co. have made an assignment to L. S. Kingman. The plant has been controlled by the Kingman Co. of Peoria, but has always retained the firm name of the Weir Plow Co.

Recent Fires.

South Bend, Ind.—The Bissell Chilled Plow Co. have suffered a loss of $40,000 by fire. Fully insured.

Miscellaneous.



Cincinnati, Ohio.—Among the foreign orders booked recently by the American Tool Works Co. of this city, was one for a full line of engine lathes from Stockholm, Sweden; another for the outfit for the big locomotive works at St. Petersburg, Russia, and a third from the Campania Agricola de Tlahualita of Zaragoza, Mexico. A large order for lathes and milling machines from the Economic Power Co., of Rochester, N. Y., will be placed in their shops at Indianapolis.

Cleveland, Ohio.—The H. P. Nail Co. recently added two monster spike machines to the equipment of the nail department. These machines, which weigh about ten tons each, resemble the ordinary wire nail machines, but are several times larger. They are used for the production of boat spikes and are the only machines of that size in existence. Each machine will make 100 kegs of these spikes in ten hours. The rod of which the spikes are made is fed into the machine by an automatic attachment. A large spring, consisting of 12 planks, is hung from a brace built for the purpose. These planks are three inches thick and about a foot wide. Six of them are on each side of the spring, which is fashioned like the letter A. The plank on the outside of the spring is about 12 feet long and the next one 11 feet, and so on to the inside plank, which is about six feet long. When the wide part of the spring is forced together and then let go suddenly, it forces a large bar of steel to strike the end of the rod, making the head of the spike. The rod is then forced into the machine and cut off, allowing the spring to make another head.

The "Eclipse Cleanable" Refrigerator is original.
It is the only removable ice chamber refrigerator having a removable flue through which pure cold dry air is introduced in the bottom of the provision room, getting under and between the provisions, and forcing the warm moist air and odors upwards, and creating a positive current or circulation. All other makes are imitations of the first crude removable tank refrigerator introduced years ago, and have an ice box set in top, from which cold, heavy air falls by gravity and forces downward the objectionable matters. THE ECLIPSE HAS THE LARGEST ICE CAPACITY.
HAS ALL THE CLEANABLE FEATURES OF OTHER MAKES.
HAS MORE TALKING POINTS THAN ANY OTHERS.
THE ECLIPSE REFRIGERATOR WORKS, BURLINGTON, VERMONT.

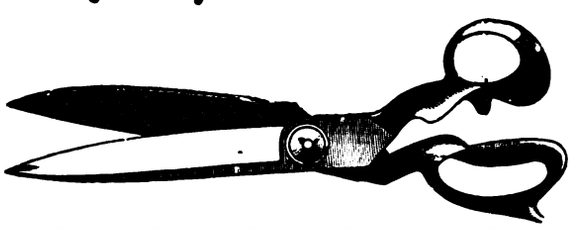
CELEBRATED **"HEINISCH"** SHEARS.

Judge Townsend of United States Court has just granted an accounting and

INJUNCTION

against H. Boker & Co. of New York City restraining them from using the name **HEINISCH** or **H. C. HEINISCH** on shears in any way which will interfere with our trade name.



We respectfully inform the trade of our determination to protect our rights and all persons found selling shears bearing any imitation of our Trade-name will be held strictly accountable for their acts.

Very Respectfully,

WANTED TEN OLD BICYCLES.

New HOWARD CHAINLESS
To be given in exchange.

OUR Advertising Department proposes to give ten latest Improved Howard Chainless Bicycles, valued at $125 each, in even exchange for an equal number of the oldest bicycles of any make, in good order and condition for use. Awards to be decided from applications sent in before the 4th of July.

All You Have to Do is to send to us in a sealed Envelope:—1. Your name, residence and postoffice address. 2 The name, factory number and description of the bicycle. 3. If you want our illustrated catalogue send two 2-cent stamps.

If you have an old bicycle you merely send the required information. It may bring to your door the best bicycle in the world in exchange for your old one. This is no scheme to secure a payment, subscription, or admittance for an agent. We want the names of people who can use good bicycles. We make HOWARD CHAINLESS BICYCLES exclusively and want to sell one or two in every town this season. Have been making chainless bicycles for years. If no agent in your town handles the Howard Chainless we will allow the first person who buys a liberal amount for his old wheel and offer him an agency.

Advertising Department **HOWARD CHAINLESS CO.,** 760 Summer Ave., Newark, N. J.

HARDWARE DEALERS SELLING BICYCLES

Are making a pleasant and profitable addition to their business. More Hardware Dealers are selling **"Imperials"** as a side line than any other class of merchants, and WHY?

"Imperial Wheels" The Go-Lightly Kind

To Bicycle Riders.

WE MAKE OUR TUBE
OF FIFTY CARBON STEEL

Because a Tube like this of our .50% CARBON STEEL Is just as strong as a Tube like this of .25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long [redacted]

and TWENTY-FIVE CARBON Steel will last only so long [redacted]

NOTE THE FULL IMPORT OF THE PARALLEL LINES.

The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory coroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

"OF INTEREST TO LIVE DEALERS."

Van Voorhis & McNair, Crawford, Neb.: We like the journal very much. It always comes to our desk full of bright, sound matter, that cannot but be of interest to all good live dealers.

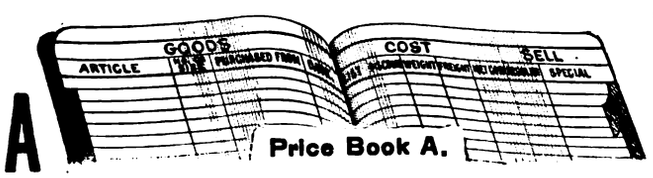
"TOO VALUABLE TO BE WITHOUT."

Charles T. Mitchell, Baltimore, Md.: HARDWARE is too valuable to be without.

"CANNOT FAIL TO HELP OUR BUSINESS."

J. C. Tanger & Co., Hanover, Pa.: Please find $1 enlosed for one year's subscription. After examining a specimen copy, we think it one of the best, and that it cannot fail to help us in our business.

"GREAT VALUE AS AN ADVERTISING MEDIUM."



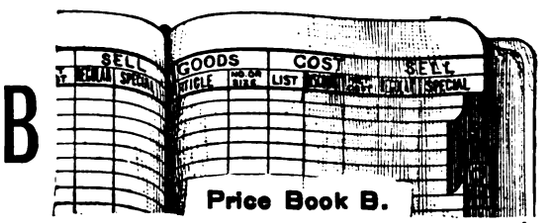
Buck Bros., Millbury, Mass. [*Tools*]: We appreciate the great value of your paper as an advertising medium.

Digitized by Google

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

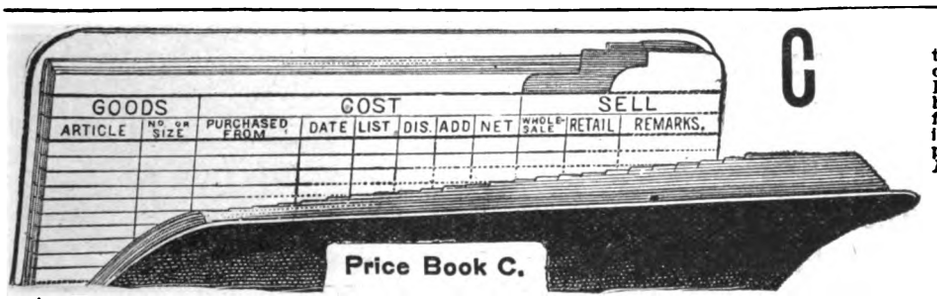


Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75



Price Book B.

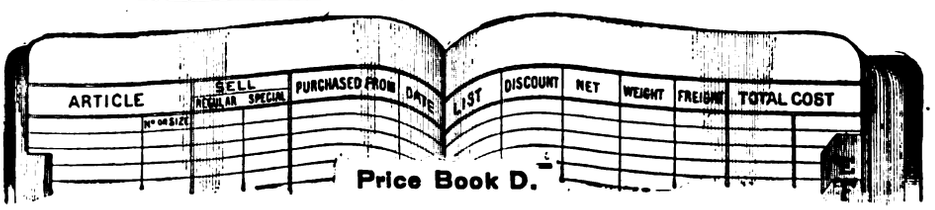
In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***



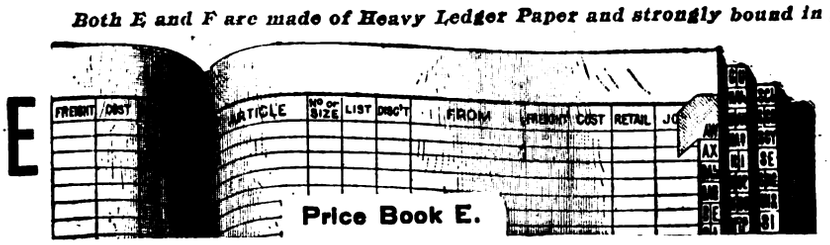
FOUR EDITIONS:

C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50



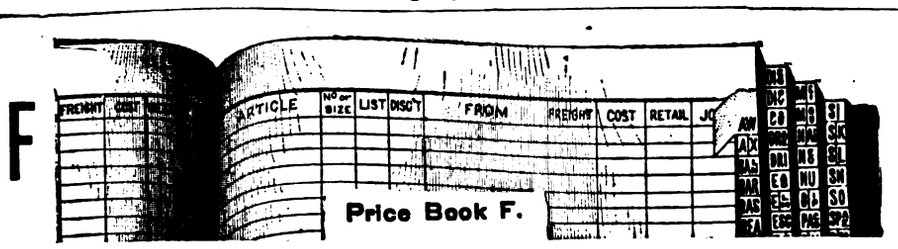
Price Book D.

MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to AU	For Chisels,	turn to CHU	For Iron,	turn to IRO
" Parers, Apple	" PAR	" Cutlery,	" CUT	" Irons,	" IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.



Price Book E.

AD	GU	SCL	
AN	HAM	SCR	
AU	HAN	SCY	
AW	HAT	SE	
AX	HI	SHE	

Fac Simile of Indexing.

Price Book E—350 pages, 7 x 10 inches, canvas tab indexing. Price, $5.00.

Price Book F.

AD	DIE	MF	SI
AN	DIC	MO	SK
AU	DO	NAI	SL
AW	DRE	NE	SN
AX	DRI	NU	SO

Fac Simile of Indexing.

556 pages, 8¼ x 11 inches, black leather tab indexing with gilt lettering. Price, $7.50.

Note.—In Price Books E and F there is an Index Character to EVERY PAGE.

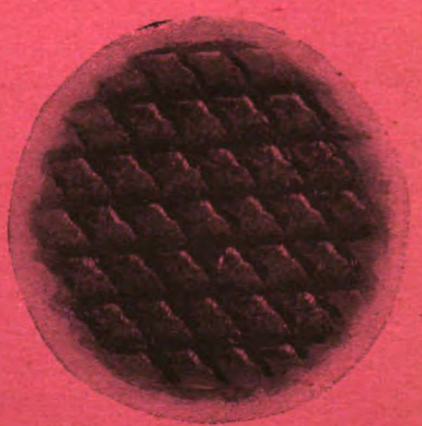
Teeth



are the important parts of a file. Of course the material must be good and the temper right; but take two or three makes of files, equal in other respects, and the one with the BEST TEETH does the most work.

And what are the best teeth?

For many years English hand cut files were beyond question the best. They also cost twice what machine cut files did, but in spite of this fact they were used by those who believed that the best was the cheapest in the end. As nearly every mechanic knows, the peculiarity of a hand cut file is the uneven

HAND-CUT FILE MAGNIFIED FIVE TIMES.

ARCADE INCREMENT-CUT FILE MAGNIFIED FIVE TIMES.

spacing of the teeth, which for some reason never discovered, take hold of a metal better than a machine cut, the latter being by the very process of manufacture evenly spaced.

The Weed Increment Cut, used on all Arcade Files, produces teeth which cannot be distinguished, either in appearance or in work, from hand cut, and which have been mistaken for hand cut by workmen when the mark was erased, and used as such.

Won't it pay you to use **the best** in your work when the best costs no more than the next best? Then let us send you a sample order of Arcade files to try. They will cost you nothing unless they cut better and wear longer than any other file in the market.

IMPORTANT INJUNCTION DECISION.

We beg to inform users of bearing metals and the trade generally that on the 20th of April, 1898, in the United States Circuit Court for the Southern District of New York, before the honorable William J. Wallace, Circuit Judge, we secured a PERMANENT INJUNCTION against Benjamin and Moses Lowenstein, trading as B. Lowenstein & Brother and as the Nassau Smelting & Refining Co., New York, restraining them from offering for sale or advertising "MONGOLIA ANTI-FRICTION METAL."

This is a fac-simile of the bar of metal which was being put out by this firm:

The following is an extract from the decree of Judge Wallace, which speaks for itself:

"ORDERED, ADJUDGED and DECREED That the complainant, the Magnolia Metal Company, is the owner of a good and valid trade-mark consisting of the word 'Magnolia' as applied to anti-friction metals and alloys made and sold by it and is entitled to the sole and exclusive use thereof, and that the defendants, Benjamin Lowenstein and Moses Lowenstein (trading as the Nassau Smelting & Refining Co.) have by the use of the word 'MONGOLIA' upon anti friction metal made and sold by them, violated and infringed upon the exclusive rights of the complainant, in the premises and it is further ORDERED, ADJUDGED AND DECREED that the defendants, Benjamin Lowenstein and Moses Lowenstein, and each of them, their and each of their attorneys, agents, servants, clerks, salesmen and employees and each of them, and all persons acting under them or their authority, be and they hereby are PERPETUALLY ENJOINED AND RESTRAINED from infringing the complainant's said trade mark and rights; and FROM MARKING, DESIGNATING OR ADVERTISING an anti-friction or other like alloy or metal as 'MONGOLIA,' and from using on any alloy or metal for anti-friction or like purposes or in conjuncture with manufacture or sale thereof the word 'MONGOLIA' or any other word calculated to deceive the public by a like close imitation of the complainant's trade mark 'MAGNOLIA,' and it is further ORDERED, ADJUDGED AND DECREED that the complainant recover from the said defendants as well the damage sustained in or by reason of said infringement as the profits, gains and saving made or realized by the defendants thereby."

BEWARE OF FRAUDULENT IMITATIONS.

The great success of Magnolia Metal as a journal bearing for all classes of mechanical work has caused numerous competitors and rivals during the past 12 years since Magnolia Metal was first put on the market, to offer imitations of Magnolia Metal, claiming them to be "the same as Magnolia Metal," "as good as Magnolia Metal," etc., etc. We have investigated a number of such cases that have come under our notice and have invariably found them to be frauds, and believing that few people countenance such methods or practices, we desire once more to warn users of babbitt metal and dealers generally to beware of all such attempts and fraudulent imitations of Magnolia Metal which are not only an injustice to us but also to the party who may be thus imposed upon.

BE SURE THAT YOU GET GENUINE MAGNOLIA METAL.

Magnolia Metal is made up in bars of which this is a fac-simile;

the NAME and TRADE MARK appear on each box and bar, and besides this the words "Patented June 3, 1890," and "Manufactured in U. S.," are stamped upon the under side of each bar.

MAGNOLIA METAL is for sale by Hardware and Mill Supply Dealers generally throughout the United States and Canada and by special selling agents at all principal distributing points throughout the world.

To Bicycle Riders.

WE MAKE OUR TUBE
OF FIFTY CARBON STEEL

Because a Tube like this of our is just as strong as a Tube like this of

.50% CARBON STEEL

.25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long

and TWENTY-FIVE CARBON Steel will last only so long

NOTE THE FULL IMPORT OF THE PARALLEL LINES.

The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory corroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

"EVERYTHING IS COMING UP."
BUSINESS IS BETTER AND THERE WILL BE A LARGER DEMAND THAN EVER FOR OUR

Sheep Skin Mitten.

Acknowledged to be the best article for polishing stoves, as it does away with the old time dirtiness of the work, making this work a pleasure. Also invaluable for polishing brass or glass, or silverware, which it does not scratch. For tan shoes and cleaning bicycles it has demonstrated itself a conspicuous success.

IS A GOOD ONE.

Morgan & Wright, Chicago Ill. [*Bicycle Tires*]: There can be no question about the advisability of using the Hardware trade as a means of disposing of bicycles and bicycle parts, and as to the efficiency of HARDWARE, we can only say what we would say in reply to an inquiry from any other publisher, i. e., we have no direct means of knowing whether our "ads" do us good or not. If we insert an "ad," it is on our judgment that the publication is a good one.

"Bright and Newsy."

Biddle Hardware Co., Philadelphia, Pa. [*General Hardware and Bicycles*]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

HENRY HOPKINS, - - Associate Editor.
FRED A. CATON, - - Asst. Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

There continues to be a fair and regular business being done on standard and legitimate lines, a confidence being felt that the war will not be of very long duration; in fact if our navy could only get hold of that elusive squadron representing Spanish honor, we would soon have nothing worth fighting for.

Once we can make Spanish defeat a thoroughly accomplished fact, the country will be found in better shape for a future commercial supremacy, greater than the most sanguine of us could ever have believed possible. We would gain the most valuable prestige by our success, and the nations of the world would metaphorically doff their hats from a respectful acknowledgment of our ability to conquer other fields of honor than those of commerce, mechanics, and agriculture.

Even under existing circumstances our export trade is suffering but little, if any. So small an amount of it was ever carried abroad in American bottoms, the exigencies of war as affecting transportation do not keep our progressive manufacturers lying awake nights; for our products in the markets of the world now possess a commanding influence that creates a confidence in our future prosperity, which well deserves to be backed up by constant effort.

Reports from the interior, the West especially, are of an encouraging tone, shelf Hardware moving to better advantage as the season progresses, and heavy Hardware also showing increased activity. The trade waited upon by the travelers, give orders for their requirements with less conservatism, and stocks are beginning to show larger assortments of desirable goods than was formerly the case. The farmers may safely be relied upon to purchase freely for crop requirements, and prices under these conditions are freer from the cutting proclivities agitating competition, than has been the feature of previous seasons.

The business will naturally know the usual summer dullness during the coming months, and preparations for the vacation season will soon be upon us.

The wire nail trade is not very brisk, and comparatively moderate priees still prevail; the advent of the stronger forces in the market not having the effect of advancing quotations, but serving simply to keep things in a more trustworthy condition and less liable to disturbing influences.

As one of the straws showing the larger transactions, commercial or otherwise, which this year compare favorably with the past, the bank clearings of the past week compared with either 1897 or 1896 show in either case an advance of over 35 per cent.; and the railroad earnings for April of 113 companies with 96,000 miles of road are stated by Bradstreet to reach $43,000,000, showing a gain of 15½ per cent. over 1897, and with the one exception of November last, the most favorable statement since the beginning of the depression.

Proposed Tax on Corporations.

The Senate Committee of Finance has incorporated in the pending internal revenue bill a tax on the gross receipts of corporations of ¼ of one per cent.

In the eyes of corporation haters this may be a "popular" tax, but let us see what it means. In the last few years many small business concerns have taken the form of corporations because they could not get the necessary amount of capital to do business on from a few partners. Some of these with a capital of $100,000 may sell a million dollars worth of goods annually, and ¼ of one per cent. would mean a tax of $2500. Their net profits, deducting expenses and losses from bad debts, might not be $5000. Why tax such a corporation one-half of its profits, or if it didn't make any profit temporarily, (as many do not) tax it out of existence, when its competitor, an individual or a firm, pays no tax? If it be decided that it is necessary to tax the industrial and business interests of the country in an additional way to carry on the war, why not make a uniform tax on sales or gross receipts of all business men and corporations of say 1–10 of one per cent.? This would realize more money and be more just and uniform, or why not impose a license tax graduated to the amount of business done? It is not generally understood that corporation means *co-operation*—by a large number of small partners known as stockholders. Even large and rich corporations pay out for labor and materials most of their receipts. If a stamp tax is imposed on checks, receipts and other documents it reaches corporations as well as other business men, and they will not object to paying their fair share, but it seems like taxing co-operative industry unjustly to tax their gross receipts when individuals and firms are not thus taxed. It is a step backward in industrial progress.

The American Philippines.

Among the many points of importance which the successful prosecution of the present war will bring prominently before the commercial world, will be its

Digitized by Google

influence on the future transactions between this country, China and Japan.

The immense population of the Chinese empire forming a foundation for an ever-growing commercial advantage, has already been foreseen by Russia, England and Germany.

The great Siberian railroad now building by Russia, has the Chinese Empire in view in its rapid progress toward economic significance; England has acquired by a long lease of twenty-five years' important rights at Wei-Hai-Wai; Germany acknowlededging the diplomatic strength of following suit, seizes Kiao-Chou for a naval base that cannot but prove of great benefit; all of these movements by the great powers have as a fundamental inspiration the mercantile possibilities of more intimate relations with Chinese trade.

Conquering, as we have, the Philippine Islands, with the approving voice of the nations above named, gives us a position of far-reaching importance from a commercial point of view; and possessing as we do a harbor of such great desirability as that of Manila, cannot do otherwise than cause us to be regarded by these strong nations as fiercer competitors than ever for the important trade and traffic of the Orient. Now that we have Manila, it will become American policy to hold these rich possessions, this strong strategic point for our future commercial plans, against all comers. Our vast resources as a competitive power, our continued success in every field of honorable effort, will create a trend in our favor that may yet bear a promise of peace to the world and prove that no plans of national significance can be projected for territorial aggrandizement or commercial progression even in the Antipodes, without inviting the criticism and approval of Uncle Sam.

It is refreshing to note that the business man is generally a patriot. Those who are, perhaps, suffering the most in their financial relations to the present war, are the most emphatic in the declaration that the campaign must be pushed with vigor and to a successful end. The business man was of the opinion, generally, that the war should have been avoided, if possible; but after the first shot was fired, he was back of the government. the navy and the army, with his whole soul. He is still a business man, and naturally deplores the present temporary stagnation of trade, but above and beyond it all, he is a patriotic American. Those who are thrown into the closest connection with the world of manufacturing and trade have the best opportunity of noting the facts set forth in the above.

The Grand Rapids Refrigerator Co., Grand Rapids, Mich., have issued a supplemental catalogue, showing some of their specialties in order work. They are now prepared to make refrigerators to order, in any wood, for any purpose, and would be pleased to receive inquiries from the trade. The catalogue shows that they are making goods of this character for grocers, butchers, florists, hotels, clubs, etc.

A "Samson Anvil" in gold, is well represented in an artistic paper weight, which the Van Wagoner & Williams Hardware Co., New York and Cleveland, are sending their friends. It is gilded so as to resemble the real Klondike color, and is a handsome reminder of a most excellent article.

HARDWARE costs only One Dollar a year.

A Letter to a Son.

My Dear Robert.—Your mother and I have read your letter with a great deal of attention, and we are sure that you mean to be just to your employers, but have overlooked one or two essential points. In the first place "Old Nails," as you call him, don't find a line in his Bible, or elsewhere, that requires him to find a "soft snap" for you, or for anybody else. Now I really believe that Messrs. Nails & Spikes went into the Hardware business up at Spooksackie for the purpose of making money, and not as an asylum for several young men who want to have a good time, and who hate to work between meals.

The only fellow who found a "soft snap" in the Hardware business, that I ever heard of, was a clerk over in Hackensack, who grew so lazy that the boss one day kicked him into a mud-puddle, in front of the store. He had impudently demanded a raise in salary—and got one in person. He was a mighty good clerk, after he was well scraped and dried.

You seem to think it rather tough, that you must have your breakfast over, and open the doors of the store at 7 o'clock. It does look a little that way. How would it do to have Nails & Spikes open it themselves, alternately, and bring you your breakfast in bed? The next time you four boys hold another indignation meeting, like that you write about, suppose you suggest it to them. Then tell me how it works, and what the bosses say about it. If you come home the next day, we will meet you with open arms—there is a lot of ploughing and planting to be done this Spring. Up here at the farm, we go to work at 5 A. M. and get through when the moon comes up.

Now, my son, let me give you a word of advice to be taken in dead earnest, and well digested.

Life is not a picnic. Of course there can be lots of fun crowded into it, in a proper way, but on the whole it is a matter of hard and earnest work.

The men who work the hardest are the happiest.

Those who are happiest in their work, are the most successful.

Every lick you put in now, will be of benefit hereafter. No matter what your pay may be, do the best that is within you.

We can't all get rich by lying on flowery beds of ease, while others fight to win the prize, or sail through each day with colors at the mast-head and every yard of canvas set. Work is the most healthful, invigorating tonic that poor human nature can help itself to.

Remember that if you are well, and busy, you must, as a result, be happy.

I want to see you make a man of yourself. You ought to have a nature full of push. You know that I have not a lazy bone in my body, while your mother, God bless her, is the busiest, cheeriest, most helpful creature on the face of the earth.

I believe you will make a man of yourself, and if you don't, I would advise you to go off someweere else to make a failure of it, as there won't be much room around here for you.

This postal note is intended for a little treat for you and the boys. As ever, I am

Your affectionate FATHER.

The Lancaster Sheet Metal Co., Lancaster, Pa., manufacturers of cornices and skylights, have recently been incorporated under the laws of Pennsylvania, with a capital stock of $25,000. The company are now erecting a brick building 28 by 106 feet at the corner of Marion and Christian Streets, Lancaster. They have added plumbing to their line, and a considerable portion of the four floors of the new building will be devoted to the carrying of a stock of plumbers' supplies for jobbing purposes. Catalogues and prices from manufacturers are desired.

A New York "Hardwareman."

There has hung for many years at the corner of Park Row and Pearl Street, New York city, a weather-beaten brass sign, bearing the inscription "Nicklin's Old Curiosity Shop." The keeper of this establishment always called it a Hardware store, but its contents were as varied in character as the mind of man could possibly conceive, running from a second-handed coffin to a fifth-handed pack of greasy playing cards. It was essentially a second-hand store, and is now in the hands of the legal heir of the man who kept it for so many years, as its proprietor, John H. Nicklin, died some days since, suddenly, of apoplexy.

Mr. Nicklin came to America from Scotland in 1859. He was patriarchal in appearance, wearing a full white beard, from the midst of which always shone a bright and genial smile. His methods of business were as queer as his stock of goods. The only inventory he possessed was that which he carried in his head, but he could tell instantly just where he had purchased each article, its cost, and its selling price; and if a customer was not willing to pay the price asked, he must go without the goods, and when he grew too persistent, the chances were that the old man would take him by the shoulders and quietly conduct him to the street. His hours for business were very irregular. On some days the shutters would come down as the sun came up, while on others, they would be kept in place until noon, or afterwards. Very often he would close up at mid-day, giving simply the excuse that he was tired, and with this, customers who were present must be content, as they were politely bowed into the street.

They Want American Goods.

A mercantile house of standing, in Barbados, West Indies, makes the following inquiries, under date of May 5, 1898. Any information which may be sent us, in answer to their request, on behalf of American manufacturers, or others, will be gladly furnished. The letter is as follows:

Editor Hardware: We would be very glad to learn if such goods, known in England as Dutch Stove or Coal Pots, three-legged negro pots and sad or flat irons, are made in the States. Dutch stoves and negro pots we do not think are sold to any extent in England, but are largely exported to these islands. We could furnish manufacturers with sizes (actual measurements) and weights of what we now import from England, and in the case of sad irons could send you one by parcel post. We want to see if these goods cannot be obtained from the States cheaper, you being nearer to us. Goods of the Cannon Co., Deepfield, Staffordshire, are popular here, especially the sads, but Dutch stoves and pots made by Holcroft, Eltingshall, and Falkirk Iron Co., near Glasgow, are also freely imported. The freight on these goods from Great Britain to us is very high, and we think we ought to do better if we can buy them nearer home.

Come in and Talk it Over.

As a soft answer turneth away wrath, so a kindly greeting often brings business. On the windows of a Fulton Street, New York, printer are two sentences in plain white enamel letters. They occuyy the lower left hand corners of the windows, and seem to have a confidential tone of friendliness about them. One is "Come in and Talk it Over;" and the other "Come in and Look Around." As a matter of speculation, it would be interesting to know how many contracts owed their orgin to the right man reading these invitations at the right time. If the writer wanted printing, or even thought he might need it and saw these invitations, the chances are a huudred to one that, if he had not time to in then, he would fix the place in his memory, and use it at the proper moment.

The more words in the ad. the less will the reader remember.—*Exchange.*

Facts About Cuba.

The Boston & Lockport Block Co., No. 142 Commercial Street, Boston, have published a little folder, just the right size for carrying in the pocket, and sure to be in use for continuous reference, entitled "Facts Concerning Cuba." It contains the Cuban flag, in colors, and also a colored map of Cuba, showing all the ports and outer points which are of such frequent mention in the newspapers. A great deal of information as to the island is also given. The company, on the final page of the folder, also call attention to yet "another fact" of importance. It is to the effect that "blocks are about the only mechanical device that people expect to give good service without any sort of lubrication." They add that Ford's Self-Lubricating Bushed Sheave for plain (common) bushed blocks, is "a great improvement over the old style 'common' bushing. Will add about three times to the life of the sheave, while it adds only about ten per cent. to the price of the block. If further interested, see pages 8 and 57 of our 1897 catalogue." The offices of the company are at Lockport, N. Y.; Boston, Mass.; No. 33 South Street, New York City.

Congratulations from Over Sea.

We offer our congratulations to our esteemed American contemporary, *Hardware*, upon its eighth birthday and its splendid issue in commemoration thereof. In editing, subediting and printing the issue leaves nothing to be desired. The editor, in looking around for suitable matter for his special number, hit upon the idea of Associations; and it is accordingly an association as well as a birthday number. This is significant, for it shows to what an extent our trans-Atlantic colleagues have adopted associations. If we were to issue a special number devoted to the same subject we should be appealing to precisely seven organizations. Now that war has been declared, American prices are certain to jump, no man knows how. These Associations will be ready to deal with these fluctuations as they occur, and thereby prevent commercial anarchy.—*The Hardwareman, England.*

Wooden Models.

There is one Hardware dealer who has found that it paid him to have wooden models made of various seasonable articles, which he hung in front of his place of business. One time it is a skate, then a gun, then a bicycle, and again a lawn mower. These articles are made by a clerk in his employ, who is handy with an axe and jack-knife, and while sometimes not highly artistic, they attract attention, make talk, and stimulate business.

New Members of Hardware Club.

At a meeting of the board of governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership in the club:

J. O. Goodenough, Tribune Building.
Arthur F. Townsend, No. 18 Vesey Street.
Alfred Wheelwright, No. 261 Broadway.
John P. Munn, M. D., No. 261 Broadway.

A certain young man who went out West, a few weeks ago, soon after his arrival sent the following back home to his papa:

"Some skies are blue
And some are dark;
Please send me fifty—
Your son, Mark."

The father, not wishing to be outdone by his son, sent back the following reply:

"Some skies are blue
And some are pink;
I'll send you fifty—
I don't think."—*Exchange.*

A Case of Misplaced Dignity.

One of the "younger generation," who had recently been promoted to a position of responsibility, was the recipient of a lesson on the evil of jumping to conclusions, a day or two since. It was doubtless hard to swallow; but good medicine is frequently objectionable to the palate, and we venture to prophesy that this particular young man will, in the future, so guide his actions as to avoid even the appearance of evil in this particular regard.

The course of his new duties required his calling on a well-known firm not far from Chambers Street. His first visit was made before the strong sense of the importance of his position had become secondary to the necessity of showing a department profit.

As he entered the office he noticed a pale, mild-looking young man seated at the desk nearest the door. This individual, whose hat rested peacefully on top of the desk, was engaged in listlessly turning over the leaves of a catalogue, and merely favored the visitor with a careless glance as he entered. The visitor stood near the desk for a moment or two and received no attention. Every one else in the place seemed busy except the occupant of the desk, and he was indifferent. Clearly, this was a case of neglect of the firm's interests, and should be sharply reproved. The most effective method would be a little well-chosen sarcasm.

Advancing to the desk, he remarked, in a tone loud enough to be overheard by the various clerks in the room: "Pardon me, but you seem to be a very busy man. Is that catalogue so fascinating that you would find it hard to lay it down for a moment?"

The pale young man looked up at the visitor as the latter continued: "But doubtless you have accrued so large a share of this world's goods that business pursuits no longer attract you; and you are contemplating disposing of your personal interest in this particular firm? Or, possibly, the affairs of State oppress you? Your interest in the attitude of Europe toward our present foreign policy prevents you from giving that undivided attention to paltry commerce which has formerly marked your business career?"

A smile of amusement, but poorly concealed, flitted across the face of the pale young man; but still he vouchsafed no reply. The visitor was now thoroughly warmed up to his work, and decided to close the incident by revealing his important identity, and announcing his intention of transferring his firm's account to a house where some attention would be paid to intending purchasers.

"Permit me to add," he continued, "that I am Mr. Wright, of File, Butt & Plane, and that my original intention of placing a somewhat extensive order with you—"

The pale young man evidently concluded that the matter had gone far enough, and rising with extended hand and winning smile, he expressed his pleasure at meeting the representative of such a well-known firm, adding, with an apologetic air, that he was unfortunate enough himself to be only the financial editor of a paper which gave some attention to business interests, and that he was waiting to see the head of the firm. The air of offended dignity deserted the visitor; and, amid many blushes and the clearly audible chuckle of the unfeeling spectators, he left in disorder, with the mental resolve to send future orders around by the boy.

Seventy per cent. of the liquor licenses in New York State are issued within its incorporated cities, and 30 per cent. in the villages and townships. Prior to January 1 the city which had the largest number of saloons in proportion to its population was Long Island City. The incorporated city which has the lowest average of saloons in proportion to its population is Jamestown, Chautauqua county. There are, relatively, more Swedes in Jamestown than in any other city of the State.—*N. Y. Sun.*

Coldwell's Mowers.

The Coldwell Lawn Mower Co. have been awarded the contract for furnishing the government with lawn mowers. As usual the company received this order (which is the largest they have ever received) on their merit, as they were not the lowest bidders, and it speaks well for the merit of the mower.

The company have also closed a contract with the Commissioners of Parks, of Greater New York, to furnish new horse and hand mowers for their entire park system of New York and Brooklyn, which takes in all of Greater New York. These parks use nearly 300 hundred hand mowers and from sixty to seventy horse mowers.

In addition to the above the company have just shipped to the Park Department of the City of Buffalo a complete new outfit of horse lawn mowers for use on their city parks.

Mr. Coldwell informs us that their general business at the present time is far in excess of that of any previous year, and is due not only to the general increased demand for their mowers but also on account of the demand for their golf mowers, of which they are making a special line of both horse and hand mowers; and they have been adopted by the leading golf clubs throughout the country.

The factory is now being run to its utmost capacity and the company are contemplating enlarging their plant before next season's business begins.—*Newburgh, N. Y., Journal.*

"Hankey-Panky" Talks Wisdom.

If you are going to be a Hardwareman, be one. Keep away from politics and other bunco games.

Who are the salt of the earth? Those who don't get too fresh.

If a customer asks for a breadboard and you don't have one, sell him a mouse trap or a pair of andirons. Don't let any man get away with as much money as he brought in.

If your new clerk has too much cheek, keep him, but curb him down. If he hasn't any, bounce him!

When a woman customer comes in, encourage her to talk until she is tired. You will hear of a dozen things she needs at home—and *that's* your chance to soak her!

I can always sell to a woman who brings her baby into the store. You can't say a good thing about that kid that she won't believe.

When a man asks for a fifty cent knife, don't show him a dollar one. He may have only the fifty cents with him, and as likely as not you will lose the sale altogether.

Don't talk too much; don't talk too little. There is a happy medium somewhere between a clam and an auctioneer.

If you have faith in your goods, yonr customer will have faith in them also. One sale may be made by lying, but I don't believe a dozen can be made by it, to the same man.

At a recent meeting of the directors of the Albany Foundry Co., Albany, N. Y., John D. Green was elected president and general manager, Andrew McNamara, secretary and treasurer. They are equipped in first class shape to do gray iron castings, bronzing, japanning, nickel plating, etc. They have a nice trade on the Argand and Happy Home line of stoves and ranges. Their export trade is exceedingly good. They are now getting ready for shipment a carload order for Japan and expect to ship in a few days a carload order for Switzerland.

The cotton seed industry of the South amounts to 4,000,000 tons annually, valued at $113,000,000. In 1867 there were only four mills in operation; in 1897 there are over 300, with more than $50,000,000 invested.—*Exchange.*

Every mud hole in a highway is a black mark against the road commissioner.—*L. A. W. Bulletin.*

HARDWARE HUMOROSITIES.

It's a wonder to me why some one of the old timers in the business hasn't started a compilation of the many odd and humorous things which constantly occur in the hard working fields of the Hardware trade, and which add by the hilarity accompanying their birth, to the pleasures which serve to keep the ranks well filled with superior talent.

We could all recall to mind offhand some of these fun-providing episodes, and if by a recital of a few of them I can stir up some better story teller than myself to add to the budget, I shall feel no sense of regret in having been the means of providing a ray of sunshine on a state of existence otherwise inclining toward the prosaic.

In the early days, when Quackenbush, Townsend & Co.—or maybe it was before Mr. Townsend added his strength to the firm—were located in Cortlandt Street, New York, Charley Bartol, since identified with the mechanical toy business, was one of the younger members of the working force, and like all youngsters, especially in those days, was quite full of the Old Nick, many and many an escapade he was responsible for, but he succeeded escaping paying the penalty. One day, when Mr. Charles E. Quackenbush was sedulously working over his ledger, hunting for an eighteen cent difference he couldn't locate, in a direct line with the back of his head stood Charley getting out an order. A brother clerk, who might have been Jack Tassie, presented too tempting a mark for a pound ball of twine lying on the counter. Making an excellent aim, Charley let drive, but Jack bobbed his head, naturally and successfully, and Charles E., of the firm, got the impact on his bump of philoprogenitiveness. It was a corker. When he recovered himself sufficiently, he discovered the boys presenting all the appearances of conscious guilt.

"Who threw that ball of twine at me?" was a natural question, which he asked Charley.

"Mr. Quackenbush," said Charley, without moving a muscle of his beaming countenance, "I cannot tell a lie, it was Jack Tassie."

As Mr. Q. intuitively knew better, he advised closer attention to business, with less skylarking.

In the store of John C. Tucker's, corner of Dey and Greenwich Streets, New York, where my novitiate in the Hardware vocation was passed, there were entrances on Dey Street and also on Greenwich Street. One day, in the dull season, there entered from the Dey Street side, a tramp-like Irish mendicant who walked slowly into the centre of the store with his begging petition.

"Please help a poor fellow to get to Jersey City." The ferriage being only three cents, he soon collected it. Then going around to the Greenwich Street side he came in again in the same slow and deliberate manner and repeated the same plea for ferry money.

"Why, you infernal truth twister," Ben Southwick said, "You were here two minutes ago and got all the money you asked for." Looking up and seeing around him the same faces, he protested:

"Be Gobs you have so dom many doors to your place, you'd puzzle the divil."

Talking about Ben. Southwick, it was about the time when a new brand of axle grease, called the "Manhattan," was first placed upon the market by Burr, the manufacturer, that a large sample box was left in the store to undergo the inspection and approval of all the salesmen. It presented the appearance of an oily conglomeration of some kind, mixed with flour to give it a larger volume; and while I was going through the very natural operation of smelling the contents with a view to guessing the ingredients, along comes Ben. full of his joking proclivities, and giving the box an elegant "upper cut," he caused my nose to make an indentation in that greasy compound of about two inches. After I had gracefully withdrawn it, I had to laugh with the crowd, but for me it was no laughing matter, so passing it off as a good joke I bided my time. Now Ben. Southwick was as bald as a ten-pin ball and exceedingly short sighted. In less than twenty minutes after I had "wiped my bugle," he was leaning over an order laid out on the floor, carefully "looking it back," when I took that sample box and anointed his bald headed cranium three inches thick, with the resinous compost it contained; it was strong enough to have raised a new crop of hair if he had left it there long enough. Ben. said I got ahead of him that time.

Thomas Shepard Smith, the managing member of the firm above mentioned, was a dyspeptic, cross-grained kicker; probably made so by a weak state of health that prevented anything but a jaundiced view of temporal things. It annoyed him terribly to take an order from one of those cross-road merchants whose movements are "slower than molasses in January." He had just finished such an ordeal one day and the customer had departed, when he called me over and said:

"Henry, do you see that sample board of molasses gates?" I replied in the affirmative. The card held twenty-four samples, arranged by being "screwed in" as they would have been in a grocery store.

"Well," he said, "I want you to take and make all those handles immovable by fastening them with copper wire. I've just had a customer who actually worked every one of the twenty-four handles up and down, before he selected 'one-sixth dozen' each, of two sizes. Life's too short to have that experience repeated."

Mary Ann Moriarity, the perapatetic apple woman, one of the every-day characters of the old times now but rarely seen, was a daily visitor at the store, and the boys patronized "Apple Mary" to the limit of their condensed resources, and often received a line of peanut candy credit. Every once in a while "Apple Mary" would be missing from her accustomed haunts, and for one, two or three months, according to the severity of the Judge, she was "lost to sight, to memory dear." When again she would come around she would look plumper and better looking than usual, from enforced conditions of restfulness.

One day I took her to one side and remonstrated with her on her intemperate habits that brought about such Blackwell's Island recollections, asked her why she should so forget herself and become lost to the world even for a brief period, or words to that effect.

"Ah, faith, Mr. Hop," she said, "how can I help it? Sure it's only when I'm filled up with the owld stuff that I feel just as good as any of youse. Be gorra, when I'm sober, I know it's a dom lie." There is a moral underlying this poverty-stricken philosophy, no doubt, if one could only cipher it out. I think its the theosophical Annie Besant who says there'd be less drunkenness if the stomachs of the drunkards were only kept supplied with food. HOP.

Topics by the Way.

Editor Hardware: Thus far the war has only tended to render business active. The Cleveland jobbers have their hands full. Not even builders' Hardware is affected to an appreciable extent. This is the line that would suffer most if our people had lost their confidence in our government. Movements into the country are exceptionally heavy. The farmers are obtaining the best of prices for their product, and the storekeepers are reaping the benefit in the way of selling new goods and receiving compensation for old accounts. As matters stand now, only an active summer may be looked for.

All the Cleveland jobbers report a full demand. Each house has its full quota of traveling salesmen out, and new men are being added right along. Agricultural implements are particularly active, and prices now being quoted on all lines entail a satisfactory profit total. The buyer is not uncertain; the purchaser is determined. The "yellow" newspapers, some of them, whose utterances might conjure up a panicky feeling even in non-bellum times, have failed of their purpose. Buyer and seller stand together, and entertain toward one another the most confident feeling.

Great activity characterizes all the Hardware manufacturing plants of Cleveland and other Ohio centres. Some of them work overtime with war supplies, but all are getting enough orders from the ordinary avenues of trade and commerce to insure continued activity. A shutting down of factories and mills for want of orders is out of the question. The only drawback now is the growing scarcity of skilled workers. Indeed, there is work galore. He who is out of work now cannot have honestly looked for any.

The demand for cycles is up to a full average, but, as predicted, the demand centres upon medium-priced wheels. It is generally opined among the trade that price cutting will rule the market before the season is far advanced. Over-production and department store competition are given as the cause, against which the understanding among manufacturers of standard wheels will avail nothing. In an issue of *Hardware* a cycle buyers' club was referred to. This item has elicited much attention. Fact is, such clubs are now springing up everywhere upon the lines suggested in the item referred to.

A Western dealer will keep his store cool this summer by having the various lawn sprinklers he keeps in stock in action in a part of the store set aside for the purpose. This is a rather luxurious mode of advertising, space required being considered, but it is understood that the various manufacturers are tickled with the idea, and will promulgate it as far as possible.

The demand for ice tools is exceptionally large this season. Modern ways of living and merchandising have brought the ice tool line to something worth paying attention to by the Hardware trade, and it looks as if manufacturers were cognizant of this growing interest.

A fetching up-to-season window display has been provided with two makes of lawn swing by a Toledo dealer. Automatons occupy the seats, and an even motion is maintained by an electric current. A card held by the automatons, reads: "If you want to be in it, swing in line."

A clever little ad. is worded thusly: "We Dewey clear-cut business. We want quick sales and have no mercy for the enemy, our competitors. Therefore, we are a Sampson in competition."

"Rivet your attention to business. Business in rivets is exceptionally good," was the text of a telegram received by a Cleveland manufacturer by a traveler.

What's the matter with giving anti-department store agitation a rest, and inaugurate an anti-dust and fly campaign? It would pay better just now.

Dealers are gradually adding a line of rubber vehicle tires. The line is growing in demand, and is profitable. Country merchants are already showing a live interest.

The association number of *Hardware* was universally considered a marvel of trade journalism. It made the trade proud of *Hardware*. J. B. RINDFLEISCH.

Cleveland, Ohio, May, 1898.

The Improved Trojan Box Strapping.

The De Haven Mfg. Co., Nos. 50–54 Columbia Heights, Brooklyn, N. Y., whose striking announcement will be noticed on page 37, are having great success with their improved Trojan Box Strap which we illustrate in this article.

This is formed of a continuous band of soft steel rolled from round wire, and not made from sheet metal, being without a rivet, and by having its surface studded with bosses, permits a nail to be driven anywhere without weakening it, as the bosses protect the head of the nail and serve to strengthen the strap. See Fig. 1. This method of embossing does away with all objectionable features, as the bosses are placed in such a manner that when a nail is driven on a slant to tighten the strap, it is not apt to slip, as the point of the nail invariably strikes the raised section, they being placed in such a position that invariably the nail will not only cease to slip, but being sunk well into the wood, has a tendency to draw the strap closer to the box than without this improvement. Being drawn from round wire the edges are perfectly smooth.

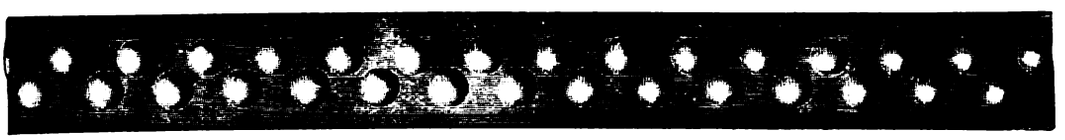

FIG. 1.

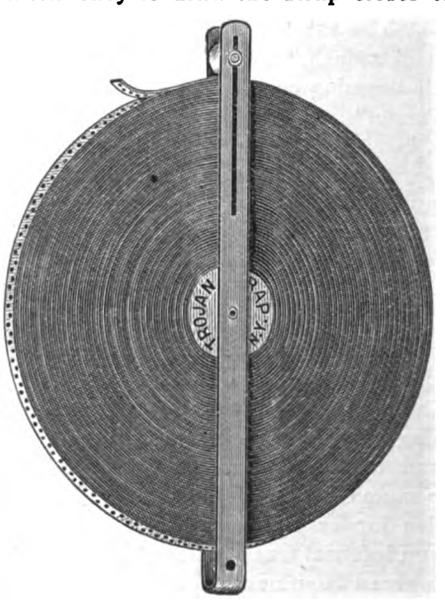

FIG. 2.

The Trojan Box Strapping is furnished on individual hangers as shown in Fig. 2, having 300 feet on each reel, full cases holding twenty reels. In this form it is very convenient to be handled by the jobbing trade, many of whom are adding it to their line of manufacturers specialties. For factory use it can be obtained on Automatic Drop

Digitized by Google

Iron floor stands as illustrated in Fig. 3, which, when this form is preferred, are loaned to customers.

This strapping is furnished by the manufacturers in a number of specified lengths running from 4 to 12 feet and

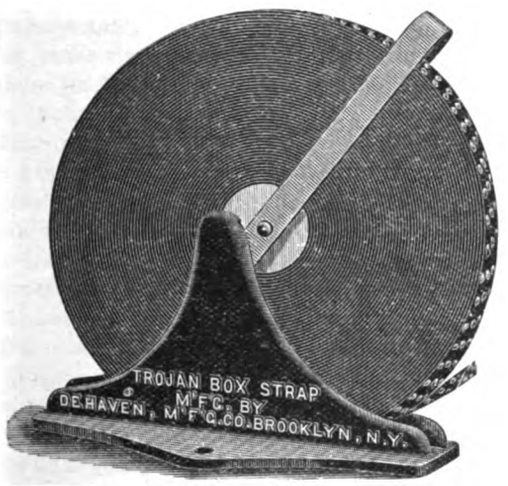

FIG. 3.

in widths of ½, ⅝ or ¾ inch, being packed in convenient bundles of 100 pairs of any size, special lengths being made to order. The company will furnish prices and samples upon request.

Southern Hardware Jobbers' Meeting.

The eighth annual convention of the Southern Hardware Jobbers' Association will be held at Old Point Comfort, Va., on the 15th, 16th and 17th of June, the Hotel Chamberlin being headquarters.

The greater part of the 15th will be devoted to joint sessions of manufacturers and jobbers, and during these sessions various matters of mutual interest will be brought up for discussion and consideration—the tendency of which is more closely to cement the ties that bind the manufacturers and jobbers. The papers, which have been especially prepared, will be read by both manufacturers and jobbers, and the occasion promises to be one of great interest to all. The president of the Association, G. W. Barnett, authorizes us to say that all manufacturers and their representatives are cordially invited to Old Point Comfort during these dates, and that the same will be cordially welcomed. Reduced railroad fares on the certificate plan (which is one fare and a third for the round trip), having been granted from all territory east of the Mississippi River, except the New England States, all who intend to be present should be sure to purchase their tickets on the certificate plan, and those manufacturers who are located in the New England States can purchase tickets to New York City, and from there secure the reduced rates.

The 16th and 17th will be devoted to executive sessions of the jobbers, during which time papers will be read, and various matters of great importance to the trade taken up. While the meeting will be largely for business, an entertainment of some character will be given on the evening of the 16th. The indications point to a large attendance, and an interesting and beneficial meeting is assured. A great many of the members will bring their wives with them, and the wives of the manufacturers and their representatives are also invited. The press committee this year consists of A. B. Palmer, of Savannah; Charles H. Watkins, of Richmond, and J. H. Watters, of Norfolk.

"The money market," Mr. Wallace began with that superior air a man assumes when he talks of public questions to his wife, "the money market—"

"Which reminds me," Mrs. Wallace interrupted.

"Reminds you of what, woman?"

"That you haven't given me the market money yet."—*Cincinnati Enquirer.*

Hardware Manufacturers Honor Dewey.

The following is condensed from an extended account in the *Journal*, South Milwaukee, Wis., of a celebration in honor of Dewey's victory, organized and managed by that enterprising organization, the Stowell Mfg. & Foundry Co. It says:

There was a grand flag raising and Admiral Dewey celebration to day at the Stowell Mfg. & Foundry Co.'s Works. Mr. Sammond, the general manager of this great manufacturing concern, not wishing South Milwaukee to be behind other cities in her display of patriotism, originated the idea which has to-day been so brilliantly carried out in every detail.

The employes of the works assembled at 12:30, and formed in line. The procession was headed by the Stowell Mfg. & Foundry Co.'s drum corps, playing patriotic airs; next were large American and Cuban flags and a shield on which was Admiral Dewey's picture, surmounted by these words: "He remembered the Maine." These were carried side by side, together with a smaller Cuban flag and an English flag. Then came the entire force of the Stowell Works, about 150 men, with their three wagons filled with children and friends, each employe carrying a small American flag. The Mayor, city officials and Volunteer Fire Department were represented in the procession, as was also the Grand Army of the Republic. It moved up Madison Avenue to Eleventh, then on Eleventh to Milwaukee, where they were joined by the employes of the Bucyrus Works, then east on Milwaukee Avenue to Ninth, then north to Monroe, where they were joined by the Eagle Horse Shoe Factory's men, headed by "Uncle Sam" mounted on a cannon; bearing the motto, "Remember the Maine." In front of Uncle Sam rode A. P. Wilde, Henry Treaumer and Charlie Christl, bearing an immense American eagle. At this point many from other factories and citizens fell into line, and the whole procession then went west to Tenth, then south to Milwaukee, then east on Milwaukee to the immense works of the Stowell Co., where the celebration took place.

Arriving at the works at 1:35, addresses were made by Mayor Bush, Supt. Stetson, representing the Bucyrus Co.; Manager McElroy, of the Eagle Horse Shoe Co.; Hon. John M. Stowell, president of the Stowell Co., who arrived home from a trip through the South, just in time for this happy occasion. Messrs. Geo. C. Jones and Belden Jones, of Chicago, directors of the company, were also present and made timely remarks. C. E. Sammond, secretary and treasurer of the company, performed the duties of master of ceremonies with characteristic dignity and ease, and everything moved along smoothly.

After the addresses came the event of the day, the hoisting of our glorious emblem, our beloved "Star Spangled Banner," enshrined in every loyal heart, and whose protection is sought by thousands upon thousands of the oppressed of other lands.

A quartette, composed of Messrs. C. E. Sammond, Arthur Davis, Carl Haase and Robert Davis, from the Lyric Glee Club, of Milwaukee, of which Mr. Sammond is president, sang "America," "Soldier's Farewell" and the "Star Spangled Banner," and it was during the singing of the last named patriotic song that Miss Anna Forsythe, who had been chosen for this honor, stepped gracefully forward and unfurled "Old Glory." Such a shout went up as has never been heard in South Milwaukee, and the whistles of all the factories in the city saluted.

At the close of the ceremonies the out-of-town visitors and other guests partook of an elegant luncheon, prepared by the Stowell Co. at the factory.

The occasion was one that will long be remembered in South Milwaukee, and reflects great credit on C. E. Sammond, who conceived the idea and so successfully carried it forward.

Improvements and Refinements of a Great Idea.

In a former issue we gave some historical facts concerning the origin and characteristics of the Yale lock. In collecting that information we found the subject of even larger interest than we had supposed, and ample to furnish material for other brief articles which we believe will be of interest.

Mr. Yale's invention was strikingly original, and embodied a radical departure from all previous practice. Since his death a like disregard of precedent, and an equal courage in striking out in new directions, have been typical of the management of the Yale & Towne Mfg. Co., and account for the fact that for many years it has occupied a position of leadership in the trade, and has perhaps been a chief contributor to the development of locks and Hardware of the better grades.

For example, the Yale front door lock, introduced a few years after Mr. Yale's death, has but a single keyhole on the outside, through which both the latch-bolt and dead-bolt are controlled, whereas, all other front door locks have always required two key-holes and two keys, one of the latter controlling the night latch and the other the dead bolt. With the old fashioned lock the latch key only controls the night latch, and the householder is liable

to be locked out at night unless he carries also the key of the dead-bolt, which is usually large and clumsy. With the Yale front door lock, on the contrary, the single small key always controls both bolts, and the householder can never be locked out even though his door is dead locked from the inside. Moreover, the construction is such that although requiring only a single key and keyhole, the picking of the lock, if feasible, would have to be twice accomplished in order to release both bolts.

As another example may be cited the Yale Office Lock, extensively used in most of the great office buildings of modern construction. This is an "Inverted" lock, having the "cylinder," which contains the keyhole, above the knob instead of below it, as previously had been the invariable practice. This transposition of parts affords much more convenient access to the keyhole than when the latter is located under the knob and therefore partly concealed by it. In other respects this lock is designed to meet the special and severe service for which it is intended.

If space permitted, many other facts could be cited illustrating the originality and progressiveness of the makers of the Yale lock, which undoubtedly have been a large factor in establishing and maintaining its unique position and which have exerted an important influence upon the practice of all American lock makers.

The accompanying illustration shows a Yale front door lock of the latest model, having the keyhole above the knob, as in the case of the office lock just referred to.

Mere attractiveness in an ad. will not sell goods.—*Ex.*

Annual Inventories.

My experience with the retail trade convinces me that there is no evil to which the average country merchant is more prone than the neglect to make a careful reckoning of his real condition from time to time. Some retail merchants will permit two or three, or even four, years to elapse between inventories, and some of them never take stock.

No merchant, however small his business, can afford to disregard this most important duty. An inventory should be taken at least once a year. Twice a year would not be too often. The advantages of inventories at frequent intervals are manifold. It is the surest way of determining the real worth of the merchant. It is the only method he can adopt of ascertaining whether or not he is conducting his business on a profitable basis. It is the best and most reliable plan of reducing stock and of finding out how much of the goods on hand is old or unsalable, and therefore needs special effort to work it off.

There is no good excuse for any merchant who neglects to follow this desirable and beneficial practice. There are at least two seasons of the year when trade is sufficiently slack to enable him to perform this most important work. These periods are those just preceding the Spring and Fall seasons, when stocks of merchandise are at their lowest. It is very desirable that a careful summing up of the previous season's results should be before the merchant at these dates, in order that he may know where he stands.

GEO. L. PENDER.

Competition in Credits.

The following paragraph is from an address by W. H. Preston, ex-president of the National Association of Credit Men, delivered before the Iowa and Nebraska Retail Implement Dealers' Association:

Perhaps you wonder why I come here as a credit man to talk to you regarding your credits, for it does seem to me that you do not need any one to tell you that credits in the retail world are not entirely satisfactory. Competition seems to impel all to grant unwise credits in order to do the volume of business they desire, but no competition can be as disastrous in any line of trade as that of loose credit giving. Surely you can better afford to compete in price and sell on a small margin when careful of your credits, for under these conditions there can be no great loss, unless your expenses exceed your profits. On the other hand, when you compete to the point of selling goods upon credit to parties not entitled to credit, you are not only risking your profit, but are hazarding your invested capital. My advice, therefore, is do not compete keenly for poor credit business.

A New Sporting Rifle.

The Remington Arms Co., Hartley & Graham, New York, agents, call especial attention to a new sporting rifle (No. 5 Remington.) This arm is designed to meet the increasing demand amongst sportsmen for a small calibre gun of light weight, and adapted to the use of modern high explosives. The breech parts are but slightly increased in weight over the usual light weight guns, and are carefully case hardened. Great penetration and simple mechanism are claimed, and the fact that it is adapted to the use of 30|30, 30 Government, and 7m|m cartridges, extends its field of utility greatly. The greater velocity makes the sights good up to 300 yards without raising.

The manufacturers of rubber hose are complaining of very much retarded sales on account of the unprecedented rain that has fallen. As one manufacturer plaintively expressed it, "We cannot enter into competition with Providence."

Recent Trade Publications.

"Open Back Single-Acting Power Presses" is the title of an attractive publication that has just been issued from the catalogue department of the Waterbury-Farrel Foundry & Machine Co., Waterbury, Conn. It contains descriptions of the various kinds of automatic feeding attachments applied to this class of power presses, "and it is our proud distinction," say the company, "of having built more automatic appliances than any one in the business." It is their aim in this catalogue to describe their line of Standard Open Back Single-Acting Presses, together with some special attachments that are applicable to them, with suggestions of the many modifications which are made to order. Arch and pillar presses, double-acting presses, foot presses, drop and hydraulic presses of various forms, will be shown in separate circulars. The company say: "The Open Back Style of Power Press possesses many well known advantages over other forms, and on account of its general convenience and adaptability to a wide range of work, has become the recognized standard. Modifications of patterns can always be made, usually with only a slight—if any—advance from regular prices; anticipating frequent changes, we have constructed patterns which enable us to make the distance from bed to bottom of slide, width between uprights, manner of holding punches, size of bed and the opening through bed, to suit any requirement, and enabling us to construct presses adapted to receive any existing tools, or fixtures, or to comply with any specification. Feeding attachments and special appliances are easily attached to these presses. Back gearing can readily be applied to all sizes and is made with teeth cut from the solid metal and with steel pinions. Adjustable incline legs can be fitted to all sizes; with this device the press may be changed quickly from upright to inclined position by turning the nuts at sides of legs and pushing the press to the desired inclination. In the very heavy sizes simple gearing is used to control the heavy weight. Fixed or solid inclined legs are furnished when desired." This catalogue will be sent on request.

The Remington Arms Co., Ilion, N. Y., with Hartley & Graham as New York agents, Nos. 313–315 Broadway, have issued a comprehensive and valuable catalogue for 1898. It contains their revised price list, illustrations and descriptions of their lines of well-known firearms, which include some new features of exceeding interest. Among these may be especially mentioned their new No. 5 rifle and No. 16 gauge shotguns. The first named, the Remington special sporting and target rifle, is a high power arm, adapted to smokeless powder cartridges. This catalogue has been carefully prepared, and contains an immense amount of valuable and timely information for both sportsmen and dealers in sporting goods. It will be sent to any who may desire it.

The W. Bingham Co., Cleveland, Ohio, have sent us two publications which together illustrate their patriotism and practical business methods. These are two cards, on one of which in handsome red, white, blue and gold, is shown the Star Spangled Banner, with a quotation underneath the same. It makes a handsome ornament for hanging up in any office or home. The second publication is issued from the house-furnishing department, and is a time-table for cooking, showing the exact time required for the proper baking or cooking of almost any article that comes in the culinary department.

Hartley & Graham, Nos. 313–315 Broadway, New York, agents for the Union Metallic Cartridge Co. and the Remington Arms Co., have issued a small and attractive circular on the Great American Handicap, which they will be pleased to mail to any address on application. It is entitled "How It Was Won; a Sketch of the Great American Handicap of 1898." It is well and carefully edited, contains a portrait of the winner and an illustration of the trophy won. It is a valuable contribution to the sportsmen's record for the present year.

The Hardwareman who desires to know how and why he can make money in handling washing machines, self-measuring oil pumps, tanks, syphons, etc., should ask the Anthony Wayne Mfg. Co., Fort Wayne, Ind., for a copy of the attractive catalogue they have recently issued. It is full of interesting information, and may prove a money-maker for those who study its contents.

The Simmons Hardware Co., St. Louis, Mo., have issued Catalogue No. 304 of their Sporting Goods Department. Nearly four hundred pages of large size, with small type, are required to enumerate this line. There is nothing in the way of sporting goods that appears to have been omitted.

The Jos. Dixon Crucible Co., Jersey City, N. J., have issued a small catalogue of their Cycle Chain Graphite. It tells all about graphite as a cycle lubricant, and shows the convenient forms in which it is put up for use by this company.

The Illinois Steel Co., Chicago, Ill., have issued an attractive and interesting monograph entitled "Mineral Wool, for Insulation of Cold Storage and Use in Architecture."

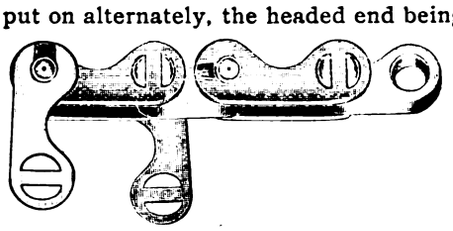
The Modern Mangle.

Mangles in one form or another have been used for hundreds of years, but the steam mangle of the present day is essentially a modern machine. Steam mangles are made of various sizes, with rolls ranging in length from 48 inches to 120 inches. One of the rolls is of hollow steel, and heated with steam. The auxiliary rolls are of iron, covered with cotton cloth and blankets or felting. Steam mangles are made also with two hot rolls. In ironing such things as sheets and table cloths by hand, it is customary to iron one side only. Steam mangles with a single hot roll iron in that manner; with two hot rolls the steam mangle irons with a smooth finish on both sides.

Mangles are used only for flat articles; for things without buttons or buckles; for sheets and pillow cases, table cloths and napkins, towels and handkerchiefs, and so on. Mangles of the largest size will iron a hotel's washing, taken just as it comes, 14,000 pieces in a day; of small pieces, such as napkins, they will iron four times as many pieces in a day.

From the washing machine the things go to an extractor to be dried. The extractor revolves at a high speed, and the moisture is whirled out by centrifugal action. From the extractor, just damp enough to work well, the things go to the mangle. Such things as sheets are fed into the great ironing machine by two men, each holding a corner. There is a fixed table, as long as the rolls, attached to the machine on the other side; two men receive the sheet there and fold it. In ironing small pieces like napkins and towels on such a machine they would be fed in by a row of girls standing on one side, and be received by another row of girls on the other side. On the largest machines there would be six or eight girls on each side. American steam mangles are used not only in this country, but they are sold in all the countries of Europe as well.

A great many mangles are made with wood rolls of polished maple. Such mangles are sometimes operated by power, but commonly by hand. They are used in hotels and laundries and restaurants, and for household work.



Mangles with wood rolls are exported to the various countries of Spanish America and to South Africa and Australia.—*N. Y. Sun.*

NEW GOODS AND SPECIALTIES.

New Detachable Link Chain.

The Stockton Mfg. Co., Newark, N. J., have just put on the market a new Detachable Link Chain. There is no riveting, each link being held in place by thin side clips. The pins are headed on one end and in assembling the chain are put on alternately, the headed end being on the

right side at one end of the link and on the left at the other end. This head has a transverse slot across its face, and the opposite end of the pin is furnished with an annular groove near its extremity. The spring clips, as shown in the illustration, have a slot or opening, extending inward a short distance from one end, and at the other end two mated perforations to correspond to the head of the chain pin. The slotted end is slipped under the groove in the plain end of a pin, and then turned in line with a link and pressed down so that the perforations will engage the head of the opposite pin. In this way each pin is held in the chain by its head at one end, and by the clip at the other. It makes the removal or insertion of a link but the work of a minute, and does away with the necessity of tools in repairing broken chains on the road or in the shop. It has also all the other advantages that arise from avoiding the riveting process, and makes the production of accurate and durable chains a task much more readily accomplished than in chains of the old pattern.

The St. Louis Washer.

The Anthony Wayne Mfg. Co., Fort Wayne, Ind., with offices in St. Louis and New York, have added to their well-known and successful line one that has already proved itself a success. This is the St. Louis Washer, shown in

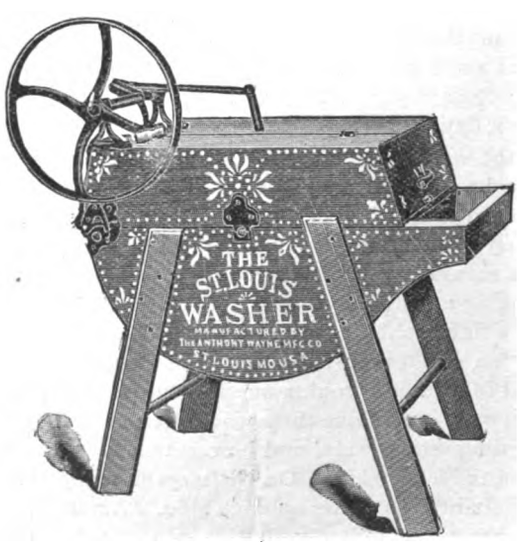

FIG. 1.—THE ST. LOUIS WASHER.

Fig. 1. As will be seen in Fig. 2, the machine is double acting, working with two cylinders or rubbers in opposite directions by the motion of the crank to which the fly wheel is attached. The clothes to be washed are placed in the machine between the two rubbers (Fig. 3), which adjust themselves to the amount of clothes in the machine, so that a few pieces, it is shown, can be washed with the same ease as a larger number. The slats on the rubbers are designed especially for this machine, and the nails that hold them are so driven that it is impossible for them to come in contact with the clothes and tear them. The edges of the slats are slightly rounded, giving the same

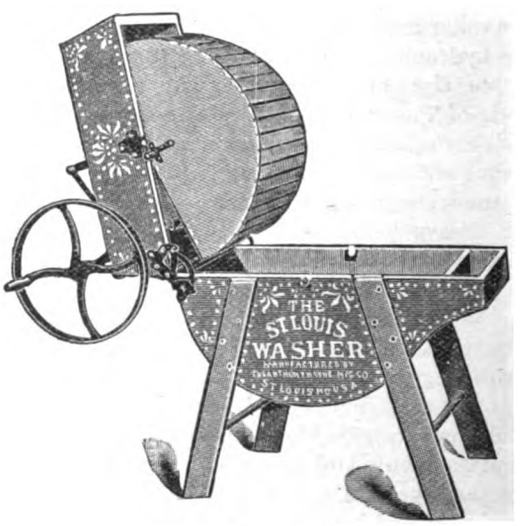

FIG. 2.—THE TWO RUBBERS RAISED WITH COVER.

washing surface without doing injury to the clothes. On account of the heavy balance wheel, and because the handle that turns the machine is about ten inches from the fulcrum of the crank shaft, the machine works so easily that a child twelve years old can do a washing with it without fatigue. All the light castings are made of malleable iron, and such as come in contact with the water are galvanized; while bolts, nails and screws are heavily tinned. Both the rubbers may be detached and taken out of the machine when it is necessary to clean the machine. Full information as to this successful new article will be

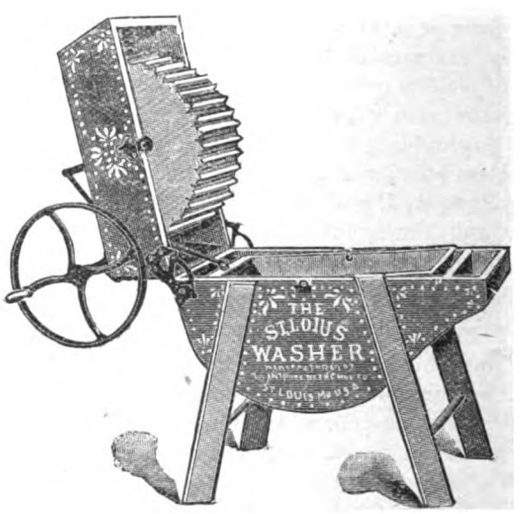

FIG. 3.—RUBBERS IN POSITION FOR WASHING.

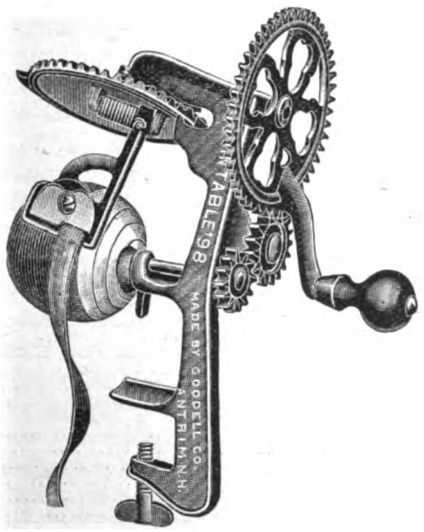
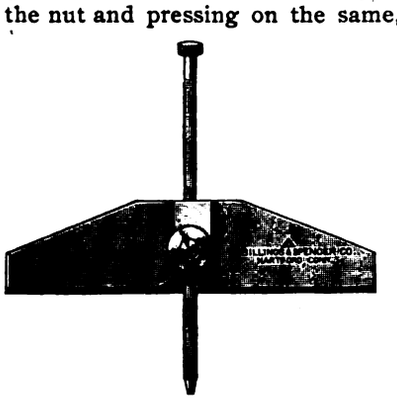


given on application to either the home office at Fort Wayne, that at St. Louis, Mo., or the New York city office, at No. 168 Chambers Street.

Turn Table "98" Apple Parer.

The Goodell Co., Antrim, N. H., who are always adding to and improving their lines of goods, have added the Turn Table "98" Apple Parer, shown in this connection. This machine is entirely new. It combines the principles which made the original Turn Table Parer so popular, with

Digitized by Google



distinct new features which add materially to its effectiveness, and warrant the statement that it fills all the possible requirements of a first class parer. As will be seen by an examination of the illustration, it is inverted, so that the parings fall clear of the working parts. It pares unusually close, at both ends of the apple. The knife, as it passes the end of the fork, recedes, leaving abundant room for

the hand, when placing the apple on the fork. The push-off is entirely automatic, simple but positive. This machine is made in the most thorough manner, and sold for little money. It is not liable to get out of order, runs easily; even when the push-off removes the apple, it is hardly noticeable to the operator, as it works so smoothly and nicely. The Goodell Co. inform us, in addition to the above, that the machine "is strong, does the very best possible work, at the same time it is lighter than machines of similar character, making it cheaper to manufacture and transport. Every one who has examined this machine is more than pleased with it. We are looking for a very large demand, and think no dealer can afford to buy any other machine of this general character without first thoroughly investigating this one."

Quick Adjusting Depth Gauge.

The Billings & Spencer Co., Hartford, Conn., have added to their extensive and well-known line, the Billings' Quick Adjusting Depth Gauge, which is shown in this connection. This is intended for die sinkers, and tool makers. Its form and character can be learned from the illustration shown in one-half size; it is well made, of first-class materials. Its method of operation is thus described: By making one half turn of the nut and pressing on the same, the screw

threaded rod is released from the half nut and can then be moved freely up and down, releasing the pressure; the half nut is locked with the screw, by action of the spring inside the nut. Fine adjustment can then be made by turning the screw. When adjustment is obtained screw the nut tight; this prevents the screw from turning.

Horseshoers' Knife Stone.

The accompanying illustration represents a sharpening stone recently gotten out by the Pike Mfg. Co., Pike Station, N. H., and No. 151 Chambers Street, New York, for the especial use of blacksmiths. It is about 8 inches long by 1¼ inches wide by ½ inch thick, oval shape, but tapered to a thin edge which just fits the hook of a farriers' knife, to which it imparts a much keener, smoother edge than can be given by a file. This stone is made from the well-known Lisbon chocolate rock, noted for its fast cutting

qualities, and is also very strong and durable. It can be used for sharpening butterises, chisels, knives or other tools around a blacksmith's shop. The stones are packed one dozen in a neat display box.

Myers' Brass Cylinder Pitcher Pump.

We are permitted to show in this connection the new Myers Brass Cylinder Pitcher Pump, which the enterprising firm of F. E. Myers & Bro., Ashland, Ohio, are placing

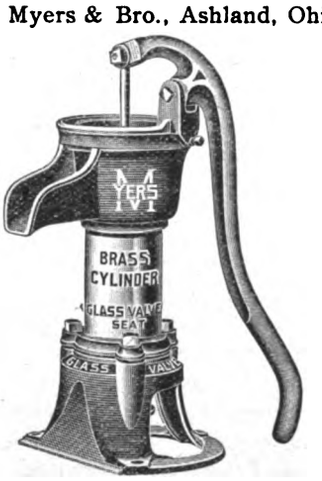


FIG. 1.—BRASS CYLINDER PITCHER PUMP.

upon the market. This pump has a patent glass valve-seat, drop valve, arranged to drop the water, to prevent freezing. In Fig. 1 is shown the pump itself; in Fig. 2, equipped with a patent aerator. This is an entirely new design, in base and throughout, and a neat pattern. It is something the manufacturers have been particular in producing, with a view to meeting the requirements of fine,

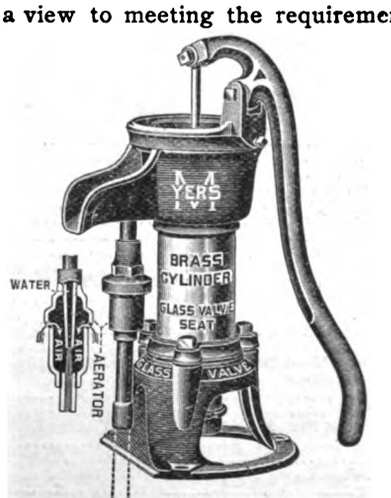

FIG. 2.—WITH PATENT AERATOR.

up-to-date plumbing. No poor work of any kind ever comes from this well-known factory at Ashland, and this new pump can be depended upon in every respect. Full information as to prices, etc., will be sent on application.

A straw indicating the direction of the breeze of popular British feeling for Uncle Sam, may be found in the post-script to a recent order for bicycle lamps from Sunderland, England. It read: "We extend our heartiest congratulations on your great naval victory at Manila."

Health "Don'ts."

Don't neglect your house drains, nor the drainage about your house. The first condition of family health is a dry and sweet atmosphere. With dry walls, a dry cellar, and drains that carry off refuse without letting in foul gases, half the battle for good health is won.

Don't let your wells or springs be infected by drainage or from other causes. Pure drinking water is indispensable for health at home or anywhere.

Don't keep the sun out of your living and sleeping rooms. Sunlight is absolutely necessary for a right condition of the atmosphere that we breathe and for our bodily well-being.

Don't sleep in the same flannels that you wear during the day.

Don't wear thin socks or light-soled shoes in cold or wet weather.

Don't catch cold. Catching cold is much more preventable than is generally supposed. A person in good physical condition is not liable to colds, and will not fall victim to them unless he is grossly careless. Keep the feet warm and dry, the head cool, the bowels and chest well protected; avoid exposure with an empty stomach; take care not to cool off too rapidly when heated; keep out of draughts; wear flannels; and with the exercise of a little common sense in various emergencies, colds will be rare. If colds were a penal offense, we should soon find a way to prevent them.

Don't neglect personal cleanliness, but use the bath with moderation and in accordance with your general health. The daily cold bath is right enough with the rugged, but it is a great tax upon the vitality of persons not in the best health, and should be abandoned if the results are not found to be favorable, and tepid water used instead. Each man in these things should be a judge for himself; that which is excellent for one is often hurtful for another.

Don't have much confidence in the curative nature of drugs. The above is from the *Phrenological Journal*, which adds: Remember that Dr. Good Habits, Dr. Diet, and Dr. Exercise are the best doctors in the world.

Large type does not always make an advertisement conspicuous.

Review of the Markets.

Local trade has been anything but brisk since our previous issue, the limited transactions indicating to some extent the effect of the stretch of wet weather we have been suffering from. This has doubtless caused a lessened movement in this season's specialties, having deference to the supplementary orders usual about this time of the year. The indefinite character of the war news keeps new enterprises in the background and deadens the ambition to do business, which would be evident if business only formed the subject of our daily discussions. The apparent necessity on the part of the government for putting forth stronger efforts to bring matters to a focus, gives no great encouragement that the summer months will prove to be unusually busy ones in the marts of general traffic.

The continued prosperous conditions of the West, are reflected here in the general good feeling, which despite war conditions everywhere prevails over the anticipated crops which are likely to be phenomenal, and bids fair to bring prices equally so. The remarkable output of iron and steel and increasing sales made possible by government requirements, have a tendency to prevent prices from weakening to any extent, and so quotations of staple goods are well sustained, and bid fair to remain so.

Wire Nails: With the moderate demand now existing in the wire nail market, but few if any changes are noticeable, the dullness of demand generally affecting this line perceptibly. Large orders are few and far between, sorting up of general stocks throughout the trade being about the principal movement. Prices remain steady as last quoted. Carload lots, f. o. b. mill, $1.35, larger specifications being shaded to $1.30. New York prices are: Carload lots on dock, $1.45; smaller lots from store, $1.55.

Cut Nails: The demand for cut nails continues moderately light, the present conditions not being favorable to any improvement. Carload lots at mill are quoted at $1.10@$1.15. New York prices, as previously quoted: Carload lots on dock, $1.17½@$1.20; smaller lots from store, $1.25@$1.30.

Barb Wire: The market for this staple is in excellent shape, firm as to prevailing prices, and with an ample amount of business in hand, immediate deliveries being frequently difficult to obtain.

The recent meeting in Cleveland, Ohio, of the wire and wire nail manufacturers, which was well represented, while making no change in quotations for Wire Nails, stiffened those on Wire by unanimously adopting the following schedule of prices:

Barb Wire, Painted		$1.40
" " Galvanized		1.70
	Plain.	Galvanized.
Annealed Fence, Nos. 6 to 9	$1.15	$1.45
" " No. 10	1.20	1.50
" " " 11	1.25	1.55
" " " 12	1.30	1.60
" " " 13	1.40	1.70
" " " 14	1.50	1.80
" " " 15	1.60	2.10
" " " 16	1.70	2.20
" " " 17	1.85	2 60
" " " 18	2.00	2 75
Painted Twist Cable		1.40
Galvanized Twist Cable		1.70
Staples, plain and polished		1.40
" galvanized		1.70
Wire Nails		1.30

These prices are made f. o. b. Cleveland and Pittsburg, with differential advances for Chicago, Cincinnati and Louisville of 10c. per 100 pouuds. The trade judging from the reports of the various manufacturers was never in a condition of greater productiveness.

Hammers, Hatchets, etc.: The discount sheet applying to the new 1898 catalogue of Fayette R. Plumb, is given on another page of this paper. Business in this important line is reported as being well sustained, with anticipations for a fine fall trade.

Cordage: Advancing prices have dominated this market for some time and from all appearances are likely to continue. Carload lots are now held on the basis of following quotations, smaller quantities being quoted at a slight advance:

Manila, 7-16 inch and larger	Per pound, 7¼c.
" ⅜ inch	" 8¼c.
" ¼ and 5-16 inch	" 8¼c.
Sisal, 7-16 inch and larger	" 6¾c.
" ⅜ inch	" 7¼c.
" ¼ and 5-16 inch	" 7¼c.

Binder Twine: In sympathy with the advancing prices on rope, binder twine is firm in Eastern factories at following quotations: For carload lots, f. o. b. white sisal, 6¼ cents per pound; Manila, 550 feet to the pound, 7¼ cents per pound.

Linseed Oil: The Dean Linseed Oil Co., No. 181 Front Street, New York, under date of May 16th, quote as follows: In lots of less than 5 barrels, 45 cents per gallon; in lots of 5 barrels or more, 44 cents per gallon. The 5-barrel price only applies to deliveries of that quantity at one time. Boiled linseed oil, 2 cents per gallon higher than raw. Calcutta oil, 54 cents per gallon. Above prices are subject to change without notice.

THE BIRMINGHAM TRADE.

We have learned by the experience of a series of years that May is our dullest month in this section. For this reason, we have adopted this month for taking stock. We are in the midst of that work now, and will close our fiscal year June 1st. This year is no exception to the rule, and just now trade is dull. However, not more so than formerly; in fact, our business has been an increase over former years up to date. All thoughts have been turned, for some time, to the great question of war between United States and Spain. Some people are hesitating, waiting to see what effect war will have upon business, and it has had the effect of making all conservative, and perhaps has limited the purchases somewhat, inasmuch as the policy has been to only keep up the stock, and have on hand such goods as were actually needed. There is no good reason why business should be seriously affected on account of the war in this particular locality, since we are somewhat removed from the scene of action, and everyone is left free to pursue his normal duties. Something has had the effect of putting up the price of wheat and provisions from which our Western friends have profited not a little, and, to some extent, the whole country has shared in this advantage, inasmuch as large quantities of wheat have been exported, and it has been the means of bringing large sums of money, and that of the best kind, to our country.

We notice that the balance of trade has been very largely in favor of our country, which goes a long way towards solving the money problem, inasmuch as it increases our circulation, which seems to be the great desire of many, and that too of the very best kind of money, and demonstrates that there are other avenues for increasing the circulation without resorting to the free coinage of silver, which, to my mind, would tend at first to decrease the circulation very rapidly, rather than increase it, as many think.

We are also glad to note that the railroads have had increased earnings, which is one of the very best indications that the business of the country has been active; in fact, we know of no better way of judging of the general welfare than by watching the tonnage of the railroads and bank clearings, both of which have been unprecedentedly large. We anticipate that business will be good for the coming months, even though we do not anticipate any great advance in prices, except in the way of bread stuffs. The conditions that would tend to affect the prices of the general line of Hardware are somewhat different from what they were in former years when our country was at war. Now, then, we have plenty of good money and a well-established credit, in which not only all of our own people but the entire world have full confidence. Formerly we were consuming more goods than we were making;

Digitized by Google

now, then, we can manufacture more than we need when our factories are running full time, which will tend to bring more goods on the market than are needed for our own consumption, and, unless we can find a foreign outlet, it will leave a surplus on the market which will certainly hold prices down to a low level. If our factories could not produce enough for our own consumption, and we had to depend upon foreign markets for our supply, with the difficulties of importing increased, then there would be a good reason to expect an advance, but the reverse of this proposition is true, which we anticipate will have the effect of keeping goods plentiful and the prices low.

We fear that in some parts of the country, owing to the rapid advance in the cost of living through the increased price of provisions, the laborer will feel that he is entitled to greater wages, and we readily admit that this is a forcible argument. Now, as to whether the manufacturers can consent to an increase or not, is another question. The difference of opinion on these lines may result in strikes, and the curtailment of the production by shutting down some of the factories. We hope, however, that this will not be the case, and that all reasonable differences may be properly adjusted, and that business shall continue in its normal course. MOORE & HANDLEY HARDWARE CO.

THE CHICAGO TRADE.

It is years since we have experienced so little trouble in our collection department as we have during the past four months.

Retail dealers in Hardware must have taken the present time, while farmers are being so well paid for their produce, to not only collect their old accounts, but also to inaugurate a system of selling more Hardware for cash.

Another feature of our trade, which we have lately noticed, is more activity in the demand for mechanics' tools; this is certainly an indication of more building and better times.

Prices of goods hold firmly with an occasional advance, and purchasers have about concluded that the bottom is reached in prices.

Our traveling agents are doing a fine business and our mail order trade was never much better than at the present time, so that of late we have been obliged to have our force of order clerks back to the store to work nights.

Prospects for the future were never finer than at this writing. WELLS & NELLEGAR CO.

THE MINNEAPOLIS TRADE.

The general business condition in the Northwest, we believe, was never more favorable than now. The farmers have had two good crop years; that of two years ago was large, but at rather low prices, but a good liberal price per acre; while last year the crop to a certain extent was somewhat of a disappointment, as we had anticipated much more than was received, but they realized high prices, about eighty cents per bushel net to the farmers for their wheat, and in consequence mortgages, as a rule, have been paid off, machinery and store bills paid, and money in the banks. There is more money in the country banks than ever before, and money was loaned on wheat by banks in the Northwest at lower rates than money from the East. As a country banker told the writer a few days ago: "The country tributary to the Twin Cities was never in so prosperous a condition."

The ground for the coming crop is in excellent shape. While we had little or no snow, the swamps, lakes and sloughs were well filled from the abundance of snow the previous winter, and the wet season we had last year, and with just enough rain along during seeding time to give the grain a good start, certainly the conditions are most favorable for one of the largest crops ever raised, while it seems quite probable that the farmers will receive nearly, if not quite, $1 per bushel—a very happy state of affairs for them as well as the rest of the people in the Northwest.

Another thing that makes the outlook very favorable, is the fact that during the past two years the farmer has got such excellent returns *per acre* for his products; everything that he had to buy was sold at very low figures, whether machinery, dry goods, groceries, Hardware, boots and shoes, etc. Certainly this prosperity must make itself felt in the cities. The jobbers are already feeling it to a very great extent. Probably they are turning out a greater volume of goods than ever before, with a little increase in values all along the line.

There is somewhat more building going on here than for some years past, and we think by fall business in this line will be good.

We do not believe that the war is going to hurt us any. We mean by "us" the country as a whole, not only our immediate section. The government will spend $300,000,000 to $500,000,000 in prosecuting this war, all of which will be spent in this country with the exception of perhaps $10,000,000 that was expended in purchasing war ships and munitions of war before war was declared; this will make business good all over the country, in all lines, with very few exceptions.

We do not think, however, that we needed the stimulus of a war, for we believe that conditions were right for good business without it. We believe that we are on the eve of the most prosperous times this country has ever seen. A new era is opening to us. A prediction: We will annex the Hawaiian Islands, we will keep the rich Philippines, also Cuba and Porto Rico, when we have captured them, and the Canaries too, if necessary to take them as a basis from which to operate against Spain; we must have a canal across the isthmus and a canal entirely through American territory to connect the Great Lakes with the sea; our cities suitably fortified, with sufficient men in our standing army to man them; our navy superior to that of any other power with the exception of England; our flag carried by American-built ships to every port of the world and defended as it has not always been during the past thirty years. The war has already united the country as never before. While it is unfortunate that we could not have accomplished the freedom of Cuba without war, there are, we believe, some compensating advantages.

W. K. MORISON & CO.

THE CLEVELAND TRADE.

The patience of Hardware buyers is often tried by visiting salesmen, but the reverse is more often true. Salesmen "take upon themselves the form of servants," and are often treated as menials. They should be treated as friends, for as a rule they are gentlemen, and can correctly measure the men they meet. The contempt they feel for some buyers is more than likely justified. The system of traveling salesmen is equivalent to university extension among buyers. They are kept thoroughly posted by their houses, and are alert to give any information that will be of value to their customers, and take pleasure in covering their wants if there is likely to be an advance, and giving caution if they anticipate a decline. They do this often at their own expense and the expense of their house for buyers they respect.

Ungentlemanly treatment of salesmen is unwise, if for no other than financial reasons, but we cannot figure on the money value of virtue. Every man ought to act manly on his own account and do what he can to make the lot of the other fellow pleasant.

Salesmen are often heard to say: "I dread to call on that man. I always leave him with a feeling of degradation."

The flattery of the mass may be secured by fawning pretence, but only genuine coin wins respect of men on the road; they see through shams, and their good opinion

Digitized by Google

outweighs in value that of the same number of any other class of citizens.

I commend this subject for consideration to organized associations, as it might smooth some roughness and straighten some crookedness in business life.

Salesmen are not always perfect, but the example of buyers may sometimes be responsible, as misrepresentation by one causes distrust of others.

A large proportion of buyers are gentlemen; they can skip this exhortation.

The war has materially affected the business of the country, creating hesitation for the present. Rope and twine have materially advanced, so that advanced orders on these goods for the first time in years are a good investment. Friction and competition between the new nail and wire company with outside companies have resulted in a reduction of prices. Bicycle trade is vigorous. Farmers are in better condition than for many years, and this gives promise of a fair business. The iron interest is in a waiting condition, notwithstanding the large demand from the government. Trade for May is looking well.

The departure of a large number of our young men to the war leaves a gloom of sadness; the hope of their early return is universal, and that Spain, the disgrace of the century, will disappear from the map, at least so far as this hemisphere is concerned.

LOCKWOOD-TAYLOR HARDWARE CO.

THE PITTSBURG TRADE.

Patriotism, rather than commercialism, pervades the community at present. Business is given second place in men's thoughts during these exciting days. Yet, despite this fact, the amount of business keeps up to last year, and the genuine improved condition of the country is bound to bring an increased amount of it during this year.

Locally, our mills are all well employed, though still at low prices. We heard of a fifty-ton shipment of crowbars to Russia the other day, which was gotten off in a few days on a rush order.

Pittsburg armor plate and Pittsburg projectiles are coming prominently to the front just now, and will take an important part in the offensive and defensive work of our fleets. That they will prove worthy of the confidence reposed in them we do not doubt.

Spring weather has at last reached us; that is, the sunshine part of it, as we have had a seeming surplus of rain. Warm, dry weather will move off summer goods and bicycles, which have not been going off as fast as they should lately. LOGAN-GREGG HARDWARE CO.

THE COLUMBUS TRADE.

Trade is very active in this part of the State, and the demand for seasonable goods such as steel goods, lawn mowers, screen goods, bicycles, etc., is in excess of the manufacturers' and jobbers' ability to fill. On fence wire we consider ourselves in luck if we get an order filled inside of ten days, but no doubt this state of affairs will not last much longer now, as the spring rush will soon be over. Smooth wire has advanced 5 cents per 100 pounds, while barbed wire and nails remain the same. We received a circular from one concern making a very low price on nails, and while we had no confidence in the quotation, we sent them an order for 1000 kegs. We received a reply saying the quotation was an error, and made a new price, which was no better than the regular prices. There has been a great many rumors as to the price on nails, but we believe the quotations were made simply to demoralize the price, knowing that they could not fill orders if they got any; or, as in our case, claimed the quotation was an error. These same tactics were resorted to when the National Nail Association was formed.

Rope and binder twine are still on the advance, and it looks very much as though both would be hard to get if the war is not ended soon. Even then it will take the inhabitants on the Philippine Islands quite a while to realize what has happened after they waken up, and we fear many a one will never awaken until Gabriel blows his horn, and we doubt very much whether the music from Gabriel's horn will be in tune with the majority of Spaniards.

We are having too frequent rains for the farmers to get their crops in, and corn planting is going to be late in this vicinity. Grass and wheat are doing well, and we have had no frost to injure the fruit, and, barring any mishap between this and harvest time, farmers will be happy, and in turn make the merchants happy by paying up old accounts.

Columbus has been full of war spirit for the past two weeks, and troops have been leaving almost every day. Camp Bushnell will be almost deserted by the last of this week. The writer saw a regiment marching to the depot to-day and was interested in the pets some of the soldiers carried along with them. Nearly every squad had a mascot of some kind. One carried a duck, another a small goat, another a small dog, while a number of them had dogs too large to carry and led them along in the ranks. They seemed to keep pretty good time, too. Human nature is the same the world over, and men like pets of some kind and get a great deal of pleasure out of their companionship. We hope they will all come back, soldiers, ducks and dogs.

SMITH BROS. HARDWARE CO.

THE OMAHA TRADE.

Trade has shown a little less activity for a short time past, on account of the fact that the farmers are unusually busy with their spring work, and a succession of heavy rains have put the roads in a bad condition. Nevertheless, the volume of business continues to hold up to a very satis-

factory figure, and indications point to a continuance of this condition of affairs. The demand for season goods appears to be somewhat in excess of the supply, and considerable difficulty is experienced in securing prompt deliveries. Both grain and stock are bringing prices that bring the purchaser a very satisfactory profit; no complaint is made in regard to the prices of produce, and collections are correspondingly good. The Exposition, which will open on the 1st of June, will, undoubtedly, have a tendency to stimulate interest in the Central West, and give our Eastern friends an idea of the resources and developments of this region in which such rapid strides have been made for a few years past. RECTOR & WILHELMY CO.

THE PHILADELPHIA TRADE.

The long spell of wet weather, which has lasted nearly a month, has naturally had its effect on spring trade; while the war with Spain also tends to promote uncertainty and a waiting feeling.

It is scarcely a cause for wonder, therefore, that dealers should move cautiously until a certainty is reached and better weather arrives, but we are glad to say that both of these now appear to be in prospect. The victory at Manila has done much towards strengthening the situation, while the re-appearance of the sun has brightened the hearts of the farming community, and orders are more plentiful in consequence; with wheat ranging from $1.16 for July up to high-water mark, $1.90 for May, with the prospects of a crop 10 per cent. larger than la t year.

It seems indications point towards prosperity. Manufacturers are very busy on regular work; manufacturers of agricultural implements report a demand far in excess of anything heretofore experienced. Other mills are rushed with government contracts, and, while here and there, exceptions are found, manufacturers, as a rule, are quite busy. A large amount of money is being paid out in wages, while the increased taxation proposed by Congress seems certain to have an effect in advancing prices and raising the cost of all goods. Under these circumstances, it is but reasonable to look for a firmer market, and with a probability of more profitable prices to all hands.

So far changes in prices have been very few; everything is almost on the lowest level, and purchases in reasonable quantities appear to be more than safe.

BIDDLE HARDWARE CO.

THE TOLEDO TRADE.

Although we have not written very much for publication during the last four months, we are still alive and at the old stand.

The fact of the matter is, we have been too busy to give our attention to much of anything else, except to take care of the orders that came to hand. Trade up to the present time has been very satisfactory, the only disappointment being that it was a difficult matter to get seasonable goods, such as wire and nails, poultry netting, etc. No doubt a great deal of this was brought about owing to the very early opening of the Spring weather.

In the last two weeks the excitement arising from the war has retarded business considerably, but no doubt we will soon get the tardy orders with interest.

Grain of all kind is bringing a very good price, and it ought to make the farmers feel good. We also notice that when the farming community does well, business in general is excellent.

Prices in general are advancing, notably rope, glass and a few other lines. Business in Toledo in the manufacturing line has been quite brisk; in fact, our bicycle plants have been so filled up with orders that they could not accept any more. We also see from other factories that their trade has increased all the way from 25 to 100 per cent. over last year. There is also considerable building going on in Toledo.

We also wish to say that three years from now, Toledo will have one of the largest centennial exhibitions that has ever been attempted by any State—The Ohio Centennial!

We wish you would write our friend Smith, of Columbus, and say that, although Toledo may be a way station, (according to his idea) we are wide awake and have friends all over the state of Ohio; in fact so much, that Columbus was not in it at all in the matter of selecting a site for our State centennial, and we wish to invite our friend Smith and others from Columbus to come up to Toledo some time and see just how a *live* city does business. We will guarantee him that he will never forget Toledo.

Collections have been quite satisfactory, and the outlook for business this summer is very good.

STOLLBERG & CLAPP CO.

THE GRAPHITE TRADE.

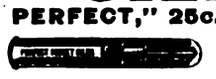
There is nothing in the "war scare" which has had any effect in reducing the volume of our business. Everything is going merrily along, with April sales showing an advance over several previous years.

Crucibles are in great demand at firm prices. We are protecting customers as much as possible, sharing with them the increase in value of raw stock.

There seems to be, in the South, a disposition to hold off on orders. Our Southern traveling men do not hesitate to attribute lean orders to that cause.

Collections are "steady by jerks," particularly among the smaller houses. The large jobbers do not let anything divert them from regular settlements.

JOSEPH DIXON CRUCIBLE CO.



That submarine boat is appropriately named. Holland has been under water before.—*Rochester Democrat.*

Universal Spoke Shave.

Has two detachable bottoms, adapting it equally well to circular work or straight; and, by means of a movable width-gauge, can be used in rabbeting. Either handle can be screwed into a socket on top of the stock, thus enabling the owner to work into corners, or panels.

No. 67. Spoke Shave, for curved or straight work, $1.50

Patriotism and Business.

The flags of the United States and of Cuba hang side by side on the latest patriotic publication sent forth by F. E. Myers & Bro., Ashland, Ohio. These are printed in colors, red, white and blue, and on the reverse page is a portrait of Uncle Sam, who is making a solid roadway from Florida to Cuba, and disposing of the superfluous water by the use of Myers' Pumps in the hands of an army of brownies. On the inside pages, is a ballad that mixes patriotism and business in an attractive manner. The opening verse is as follows:

Let us take a bo'd stand
In our battle with Spain;
Let us never forget
The loss of our Maine;
Let us throw aside indifference.
Become our country's defender,
And force the bold Spaniards
To unconditional surrender.

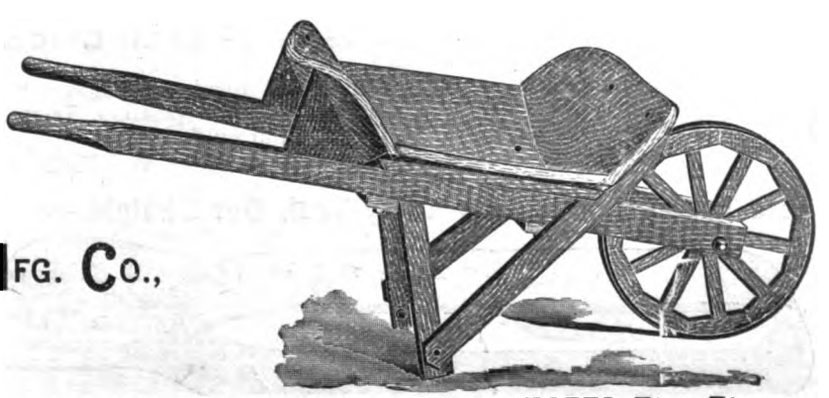
Getting down to business the poet continues:

That ancient old "chestnut"
I oft have heard tell,
About a "moss covered bucket
Which hung in the well;"
But in this growing age
A man is a chump
Who don't have in his well
A "Myers Force Pump."

The old chain and windlass
Might do for the first,
But we want something quicker
When quenching our thirst.
Throw the "old oaken bucket"
With its moss in the dump,
And put in your well
A Myers Force Pump.

The Retail Merchant of 1900.

What changes may we look for within the next few years? This is a query which all retailers with small capital may well ponder. Already the thoughtful merchant has recognized the necessity for the adoption of safeguards to prevent the loss of capital. It may be said that hard times have made people the more careful of their dimes, or that the great department stores in the cities, with their peculiar methods, have made a hole in the small merchant's profit, or that it is the ever-extending trolley line or the frequent cheap excursions to the large centers. It may be said that it is the mail order houses, supplying the consumer. But, say what you will, there is no denying the fact that changes have come and that changes are still going on. Let every merchant, therefore, fortify his business by adopting the soundest rules. Let him collect his accounts promptly; let him sell more nearly for cash; let him meet competition rationally; let him push profitable goods energetically and restrict his buying to what he can sell, and sell quickly. The necessity of the hour is to make the business pay, whatever it is, or else the retailer must prepare to join the wage workers of the world with whatever grace he can command.—*Exchange.*



The Geo. H. Clowes Mfg. Co., New York, report large sales of the Calcium King Cycle Lamp, both domestic and foreign. Recent improvements have been made in the bracket, involving a larger adjustment disk, which, on account of having more teeth, admits of finer adjustment, and prevents slipping. The carbophene is now put up in air-tight cartridges, making a neat compact package, from which there is absolutely no odor. The carbophene is subjected to hydraulic pressure, and is now in hard cake form, instead of loose powder as formerly.

The Ausable Horse Nail Co., New York, state that sales of their goods up to May 1st are far in excess of the corresponding months of last year.

Electrical Advance of Ten Years.

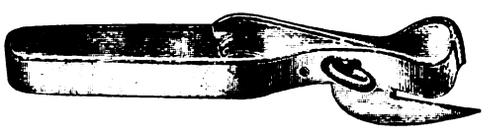
In spite of the difficulties to be overcome, the electric railway has, in a very few years, put an end to horse-traction on city railways, the cruelties of which—not always to be avoided, perhaps—remain now only as a fading memory. Electric traction has given greater speed, better cars—which are lighted and heated electrically—and a resulting cleanliness and comfort not otherwise attainable.

But facts so evident call for no comment. Meanwhile, it has been shown that single cars may be propelled at high train-speeds with comparative safety. Even sixty miles an hour has been exceeded. It has also been proved, by the construction of several huge electric locomotives for the Baltimore & Ohio Railroad, expressly for tunnel service, that such electric machinery can haul the heaviest train-loads and can more than equal in power locomotives worked by steam.

Electric traction is now generally regarded as the ideal method for elevated railways, and as practically indispensable to underground or tunnel traffic in cities. A new underground road is now being constructed in London, which, when completed, will be a splendid example of the latest methods of the distribution and application of electricity to train-service

Indeed, electricity seems destined at no distant day to play an important part in revolutionizing passenger traffic between large centres of population. The facility with which electric service may be superposed on ordinary steam-roads will greatly further this development. The work with the third-rail system, undertaken by one of our prominent railway organizations, has abundantly demonstrated the practicability of such superposition. The future will witness the growing substitution of either single-motor cars, or two or three coupled cars, for long heavy trains drawn by locomotives; and a more frequent service will result. There is an eventual possibility of higher average speeds, since stops will not consume much time, and the time required to recover the speed after a stop will be much less than at present. There will be no annoyance due to escaping steam, smoke or cinders; no sparks to cause forest or brush fires; no stopping to change engines, nor for taking up water or coal. The locomotive will be supplanted by electric motors driving the axles of the cars as in street-railway service. Cheap fuel can be used to generate the power in the electric stations, and the best conditions for economy of fuel maintained.—*The Forum.*

A great deal of discussion has taken place in business circles recently, in regard to syndicate buying. One of the most marked actions of which we have heard, was that taken by a wholesale house in New York. A certain out-of town merchant yielding, we suppose, to the repeated entreaties of the syndicate's agent, decided to place a small order through them. The syndicate man promptly called on the wholesale house, and asked for the best quotation on the line. List prices were quoted him, and he ordered the goods sent to the out-of-town merchant. This was done, and immediately upon the receipt of the amount of the bill, a check was returned to him for the amount of the discount from list, to which he was entitled, and inclosed was a polite note to the effect that direct orders would always receive the best prices, while orders through syndicates would be filled at list prices in future. The result was an immediate acknowledgment from the merchant, conveying his appreciation of their action and another order.



The Berlin Iron Bridge Co., East Berlin, Conn , have just completed for the Conway Electric Street Railway Co., Conway Mass., a steel bridge to carry their electric line across the Deerfield river. This bridge is about 300 feet in length.

The Cuspidor Mfg. Co., formerly of No. 30 Ward Street, Newark, N. J., have taken more commodious quarters at Railroad Avenue and Hamilton Street.

The Strauss-Hanna Cycle Material Co., No. 120 Genesee Street, Buffalo, N. Y., have published a catalogue for 1898, covering their special lines.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over are requested to contribute to this page News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Binghamton, N. Y.—The Osgood Scale Co. has been incorporated by Horton B. Osgood, Louis A. Osgood and Orlando J. Fowler. Capital stock, $30,000.

Charleston, S. C.—The Automatic Scale Co. has been incorporated with Walter Pringle president; George A. Wagener, vice-president; H. Pringle, secretary and treasurer, and Benjamin Simons, general manager. Capital stock, $50,000.

Columbus, Ohio.—The Hann Mfg. Co. has been incorporated by Chester K. and Alice M. Hann, C. W. Baldwin, Campbell M. Voorhees and Earl C. Peters, to manufacture grass catchers and like Hardware specialties. Capital stock, $10,000.

Dubuque, Ia.—The Novelty Iron Works has been incorporated by George E. Davis, E. H. Hoadford, G. A. Wchenkowitz, B. F. Richardson and John Hebler. Capital stock, $15,000.

Macon. Ga.—The Mallory & Taylor Iron Works has been incorporated for the operation of iron works, machine shops, etc. Capital stock, $25,000.

New Haven, Conn.—The Peck Brothers & Co. have filed a certificate of organization in the Secretary of State's office. The capital stock is $600,000. The purpose for which the company is organized is to manufacture and deal in brass goods of every description, also plumbers' supplies and Hardware. The stockholders are: Pierce N. Welch and H. C. Warren, of New Haven; Frank C. Hollins, of New York; Joseph Porter, of New Haven; William H. Hart, of New Britain; C. E. Bray, of New Haven; W. H. Prescott, of Rockville, and Walter Camp, of New Haven.

Norfolk, Va.—The Hydrolian Heating Co. has been incorporated, with H. P. Maxwell, president; B. J. Reynolds, vice president, and Alfred Clay, secretary-treasurer, for the purpose of manufacturing heating systems, etc. Capital stock, $50,000.

Racine, Wis.—The Lakeside Malleable Iron Co. has been incorporated by William Horlick, David G. Janes and Thomas T. Wood. Capital stock, $17,000.

St. Louis, Mo.—The Star Bucket Pump Co. have filed articles of incorporation. Capital stock, $40,000, fully paid. George M. Brown, D. D. Fisher, C. A. Bartliff and D. J. Dowling, incorporators.

Westport, Conn.—The Atlas Shear Co. has filed a certificate of organization in the Secretary of State's office. The capital stock is $20,000, and the company has been organized for the purpose of manufacturing shears, scissors, etc. The stockholders are: H. Jennings and John J. Alvord, of Greens Farms, and George Hughes, of Southport.

Changes and Improvements.

Anderson, Ind.—The Cincinnati and Anderson stockholders and anti-trust men are reorganizing to reopen the J. P. Hazen Co. wire nail mills at this place. The new organization means the addition of the rolling mill. John P. Hazen, of Cincinnati, was the head of the old company.

Anderson, Ind.—The Schofield Bolt Co. are centralizing all of their manufacturing institutions in Cleveland. The Schofield Bolt Works in this city have been closed. The machinery is being shipped to the central mills. They have already arranged to transfer their buildings at this point to manufacturers of other lines.

Braddock, Pa.—The Carnegie Steel Co. will shortly commence the work of enlarging the old rail mill of the Edgar Thomson plant at this place.

Carlisle, Pa.—The car shops of the Carlisle Mfg. Co. have been purchased by the Hamilton-Adams Railway Equipment Co., of Philadelphia. Possession will be given at once, and about 300 men will be employed in manufacturing projectiles, frogs and switches, and steel railway ties. These works have been idle for a number of years and their reopening amounts to the same as the establishment of a new industry.

Christy Park, Pa.—An addition is being built to the United States Seamless Tube Co.'s plant. The new structure is to cover about 100 feet.

Cleveland, Ohio.—The HP mill of the American Steel & Wire Co. resumed operations in all departments, except the rod mill, recently, the men having accepted the same reduction as was made in the American mill some weeks ago. This is the third mill of the American company in Cleveland to resume work.

Geneva, Ohio.—The Geneva Tool Co. is going to erect a new warehouse this season to cost about $15,000. P. W. Tuttle, the president of the company, is already negotiating with the Lake Shore Co. for the laying of a new side track with which to reach the new building.

Hamilton, Ont.—The Ontario Tack Co. propose to build an addition to their factory on Queen Street.

Harrisburg, Pa.—The Pennsylvania Steel Co. will likely start its Lochiel Furnace in June. This furnace has been idle for six years.

Jeffersonville, Ind.—The Falls City Chain Works has filed articles of incorporation. Capital stock, $20,000.

Louisville, Ky.—The Consolidated Steel & Wire Co. will probably locate a branch factory at this place. This company has already three warehouses in Louisville, which is the distributing point for the South.

New Castle, Del.—It is announced that the Delaware Iron Works, which have been idle for many months, will resume operations in the near future, giving employment to 750 men, and bringing about $8000 weekly into the town.

Plattsburgh, N. Y. — The Plattsburgh Foundry & Machine Co. have purchased an eight foot swing engine lathe, with an eighteen foot bed and weighing fifteen tons. It is capable of boring and trimming a locomotive drive wheel, or any large size pulley and is the largest tool of its kind in Northern New York. The company is experimenting in the manufacture of aluminum, and will probably put in a plant for its manufacture before Fall, in connection with their present business.

Reading, Pa.—The Carpenter Steel Works are so busy on projectile work for the United States Government that the Johnson Foundry & Machine Works has been given part of the work.

Salem, Ohio.—The nail mill here will be started at once under control of the American Steel & Wire Co. Wages will not be reduced as at some of the other plants. All old employes will be given work.

Recent Fires.

Chester, Conn.—The factory of the A. H. & J. F. Deuse Co. manufacturers of augers, etc., has been destroyed by fire. The loss is estimated at $8000; insurance, $5000

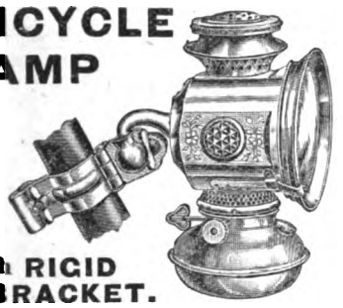
Ottawa, Ont.—J. H. Connors' washing machine factory, between George and York Streets, on Sussex Street, has been destroyed by fire. The loss is estimated at between $8000 and $10,000; partly covered by insurance.

Miscellaneous.

Pittsburg, Pa.—Orders have been placed with American manufacturers for 36,000 tons of steel rails and 4230 tons of fishplates for the Eastern Chinese railway, now building in Manchuria.

Pittsburgh, Pa.—The Westinghouse Electric & Mfg. Co. is making delivery to the railroads, for shipment to Paris, France, of a complete electrical equipment for the underground and surface street railways of that city. The order, it is said, is a large one, and comprises machinery for both power and lighting. They have also closed a contract for the furnishing of a complete electrical equipment for the San Jose Light & Power Co., of San Jose, Cal. The order comprises all kinds of electrical machinery, and will foot up close to $150,000.

Shelby, Ohio.—It is stated that the Shelby Steel Tube Co. have received an order from the United States Government for steel tubing for using in the new war vessels now in process of construction.



Trenton, N. J.—The John A. Roebling's Sons Co. have just completed an enormous submarine cable for the Western Union Telegraph Co., to be used for the transmission of telegraphic messages beneath the deep waters of Puget Sound, between Port Angeles and Victoria. The most notable fact about the cable is its great length, being 29 miles long, with but a single splice over its whole extent.

Woodbine, N. J.—A large brick factory for the use of the Universal Lock Mfg. Co. is being built in this town.

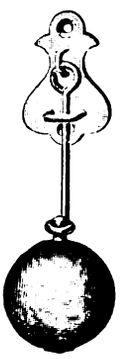
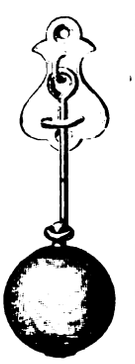
THE BANNER

BICYCLE LAMP



With RIGID BRACKET.



Workmanship, finish and burning qualities as near perfect as it is possible to make a Bicycle Lamp. . . . . .
The Wick Lock is the only practical one. Once the wick isadjusted nothing can move it up or down till you unlock it. . . .
Has a larger and better Lens than any other Bicycle Lamp. Is 3 in. in diameter, Double Convex and polished. . . . .
Guaranteed Wind-proof under Normal conditions in riding. . . . . .
All parts removable for easy cleaning. No lamp compares with it in this respect. . .

New York. Boston. Chicago. **Plume & Atwood Mfg. Co.,** FACTORIES. Waterbury and Thomaston, Conn.

No Slam.

The No-Slam Screen Door Check will prevent the slam of the screen door which so often breaks in on the summer days' quiet. The comfort that comes with the attachment of this little noise-preventer is an argument in favor of its general use. The Hardware dealer should keep it, talk about it and sell it. It is a summer necessity.

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Amesbury, Mass.— The Atwood Automatic Tire Inflation Co. has been organized here with a capital of $50,000. The company will manufacture a patent slot machine for inflating bicycle tires.

Augusta, Me.—Kendall Rubber Tire Co., have been incorporated, to make rubber tires for vehicles. Capital stock $250,000.

Ballston Spa, N. Y.—E. H. Groat.

Bangor, Me.—Bangor Bicycle Co.

Bucksport, Me.—Chandler & Haraden.

Buffalo, N. Y.—The National Bicycle Repair Co. Capital stock, $5000. Directors: Charles S. Converse, Carl Furstenberg, Lillie B. Converse and Anna E. Furstenberg, of Buffalo.

Canby, Minn.—John Walseth.

Chicago, Ill.— Chicago Pneumatic Co. has been incorporated by Blewett Lee, Dwight Lawrence and Thomas F. Sheldon; to maintain and operate a system of pneumatic tubes. Capital stock, $100,000.

Chicopee Falls, Mass.—Victor Sporting Goods Co., manufacturers, incorporated under same style.

Elmira, N. Y.—Elmira Bicycle Rack Co., has been incorporated. Capital stock $6000.

Falls City, Ind.—Falls City Cycle Works has been incorporated, with a capital stock of $20,000.

Kittery, Me. — Cummings Speed Controller Co. has been organized with Benjamin F. Bunker, president; Albert D. Crombie, treasurer; for the purpose of the manufacture and sale of speed controlling machinery. Capital stock, $200,000.

Newark, N. J.—The Columbus Bicycle Co. have opened their new store at No. 8 Central Avenue.

New York, N. Y.—Mesinger Bicycle Co. Capital stock, $30,000. Directors: Charles H. Fountaine, of Clifton, N. J.; Charles A. Watson, of Brooklyn; William A. Hulburt and Myron H. Hulburt, of New York City.

Paterson, N. J.—The Pedersen Lever Bicycle Co. Capital, $25,000. Corporators: George A. Bigelow, of Worcester, Mass.; Alfred W. Greenwood, of Paterson, and Johannes T. Pedersen, of New York.

New York, N. Y.—Waverly Bicycle Co. Capital stock, $25,000. Directors: William L. Duryea, Nyack; Percy S. Tunison, Ridgefield Park, N. J.; Irving D. Tunison, Brooklyn.

Portland, Me.—The Wheelman's Automatic Inflator Co. has been organized with Irving H. Atwood, president; Eben W. Freeman; for the purpose of dealing in materials for the inflation of bicycle tires. Capital stock, $50,000.

Rich Hill, Mo.—Dalt Elpperson will open a bicycle repair shop at this place.

Richmond, Mo. — O. W. Hummell has purchased a bicycle store.

Rockville, Ind.—John Pruett has established a bicycle factory.

Sioux Falls, S. D.—Asa McCarthy has opened a bicycle livery and repair shop at No. 121 West Tenth Street.

Terre Haute, Ind.—The Automatic Bicycle Support Co. has been incorporated by Robert Brown, Charles Holbert, Rice C. Simpson, Wm. Sampson, Charles B. Butler, Millard F. Smith and Abram L. Cabell. Capital stock, $1000.

Washington, D. C.—D. N. Walford, sporting goods, No. 909 Pennsylvania Avenue, has added bicycles to his stock.

Washington, D. C.—Washington Circle Cycle Co., located at No. 2125 Pennsylvania Avenue.

Changes and Removals.

Anderson, Ind.—The Anderson Bicycle Co., which was recently sold at receiver's sale to J. B. Lott, has been reorganized under the name of Erie Cycle & Mfg. Co. The plant is in operation. Two local retail stores have already been established.

Baltimore, Md.—The plant and equipment of the Shepherdstown Specialty Mfg. Co. was sold at public sale by trustees, and bought by William J. Knott, the principal creditor. The price it brought at the sale, $5025, was nothing near the cost of the establishment.

Boston, Mass.—The John P. Lovell Arms Co. have leased the entire building at Nos. 163 to 165 Washington Street, Boston, for their Boston branch, and will open what it is claimed will be the largest sporting goods store in New England. The repair shop and shipping rooms will be in the basement and the bicycle salesroom on the second floor. Several thousand dollars is being expended in refitting the place.

Chicago, Ill.—F. W. Morgan, bill of sale to Morgan & Wright, bicycle tire manufacturing plant; consideration, $19.888.

Cleveland, Ohio. — The differences between the Lozier Co. and the Metal Polishers' Association over the employment of girls in the Lozier factories have been amicably settled and the strikers have returned to work.

Galveston, Tex.—Murray & Mabry have sold out.

Hudson, Mich.—Knapp & Gordanier, dissolved.

Kenton, Ohio.—Will Ridgely has sold a half-interest in his business to M. A. Smith.

Long Branch, N. J.—Luther & James have been succeeded by B. A. Luther.

Marion, Ohio.—Fowler Bicycle Agency has been purchased by F. Haberman.

Marshalltown, Iowa.—E. E. Harlan, bicycles, has commenced business, having purchased the bicycle stock of Mr. Benjamin.

New York, N. Y.—Butler Hard Rubber Co., succeeded by American Hard Rubber Co.

Orlando, Fla.—J. H. Mooney, bicycles, has moved his business ino the Menefee corner.

Philadelphia, Pa. — The Ellwood Ivins Tube Co., whose mills are at Oak Lane Station, announce that they have been granted patents covering substantially the making of tapered seamless tubing and tapered fork sides. The patents seem to be very broad, the company claiming that patent No. 601,966 covers any seamless drawn tubing having the walls of greater or less thickness between the ends than at the ends, the difference in thickness exceeding two gauges.

Philadelphia, Pa. — T. B. Reinick, removed to No. 409 Cherry Street.

Port Huron, Mich.—A. G. Bowers & Co., bicycle repairers, No. 1102 Military Street, have commenced the manufacture of bicycles.

Richmond, Ind.—The Richmond Bicycle Co. has been sold by order of the creditors.

Springfield, Mass.—F. E. Battey & Co., bicycle repairers, succeeded by F. E. Battey.

Springfield, Mass. — Holden & Baggs, agents for the Silver King and Queen bicycles, on Dwight Street, have leased floor above their store, and fitted out a complete bicycle factory as a repair shop.

Westboro, Mass.—The Cycle Improvement Co. will remove its plant to Waltham, in the Fall.

Recent Embarrassments.

Buffalo, N. Y.—The Buffalo Wheel Co., bicycle makers, have made a general assignment for the benefit of their creditors.

Buffalo, N. Y.—Wm. C. Boak, dealer in bicycle supplies, has made an assignment. His liabilities, it is believed, will equal, if not exceed, his assets, amounting to $75,000.

Chicago, Ill. — Lincoln Bicycle Co., reported to have appointed a receiver.

Chicago, Ill.— M. E. Griswold Co., assigned.

Middletown, Conn.—The Mills Bell Co., manufacturers of bicycle bells, reported to have appointed a receiver.

Minneapolis, Minn.—A. F. Sweetser has been discharged as assignee of the S. F. Heath Cycle Co., he having wound up the estate and petitioned the court to that effect.

Springfield, Mass.—The directors of the Warwick Cycle Mfg. Co. have decided to assign all property of the concern outside Massachusetts to the assignees of the company to facilitate a settlement of business affairs.

Worcester, Mass. — John C. Speirs, as John C. Speirs & Co., makers of drop forgings, has filed a petition in insolvency. The assets are said to be about $33,000 and the liabilities in excess of that amount.

Recent Fires.

Boston, Mass.—L. C. Chase & Co., dealers in bicycles, damaged by fire at a loss of $40,000.

Munoy, Pa.—The Hess Bicycle factory, completely destroyed by fire.

St. Paul, Minn.—Larson & Moe, bicycles, destroyed by fire.

West Superior, Wis. — Hunter's Cycle shop has been destroyed by fire.

The "Eclipse Cleanable" Refrigerator is original.

It is the only removable ice chamber refrigerator having a removable flue through which pure cold dry air is introduced in the bottom of the provision room, getting under and between the provisions, and forcing the warm moist air and odors upwards, and creating a positive current or circulation. All other makes are imitations of the first crude removable tank refrigerator introduced years ago, and have an ice box set in top, from which cold, heavy air falls by gravity and forces downward the objectionable matters. THE ECLIPSE HAS THE LARGEST ICE CAPACITY.
HAS ALL THE CLEANABLE FEATURES OF OTHER MAKES.
HAS MORE TALKING POINTS THAN ANY OTHERS.

"FOR YEARS."

Henry Disston & Sons, Philadelphia, Pa. [*Saws, Files, etc.*]: Our opinion of HARDWARE is contained in the fact of our having carried an advertisement in your paper for a period of years.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [*Wire Goods*]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"USEFUL AS AN ADVERTISING MEDIUM."

Smith & Egge Mfg. Co., Bridgeport, Conn. [*Traps, Locks, Chains, Pulleys, etc.*]: We have found your paper very useful as an advertising medium.

"SATISFIED WITH 'HARDWARE.'"

Schoverling, Daly & Gales, New York. [*Bicycles, Guns, etc.*]: We have every reason to be satisfied with our advertising in HARDWARE.

"WELL PLEASED WITH 'HARDWARE.'"

W. W. Johnston, Bartlett, Ohio: Enclosed find $1 to pay my subscription to your journal. I am well pleased with the paper, and think it would pay all dealers in Hardware to take it.

"READS ADS. AND ALL."

Fred. A. Welles, Milwaukee, Wis.: I like your paper first rate, and I read the advertisements as well as the rest.

WANTED TEN OLD BICYCLES.

New HOWARD CHAINLESS
To be given in exchange.

OUR Advertising Department proposes to give ten latest Improved Howard Chainless Bicycles, valued at $125 each, in even exchange for an equal number of the oldest bicycles of any make, in good order and condition for use. Awards to be decided from applications sent in before the 4th of July.

All You Have to Do is to send to us in a sealed Envelope:—1. Your name, residence and postoffice address. 2 The name, factory number and description of the bicycle. 3. If you want our illustrated catalogue send two 2-cent stamps.

If you have an old bicycle you merely send the required information. It may bring to your door the best bicycle in the world in exchange for your old one. This is no scheme to secure a payment, subscription, or admittance for an agent. We want the names of people who can use good bicycles. We make HOWARD CHAINLESS BICYCLES exclusively and want to sell one or two in every town this season. Have been making chainless bicycles for years. If no agent in your town handles the Howard Chainless we will allow the first person who buys a liberal amount for his old wheel and offer him an agency.

Advertising Department **HOWARD CHAINLESS CO.,** 760 Summer Ave., Newark, N. J.

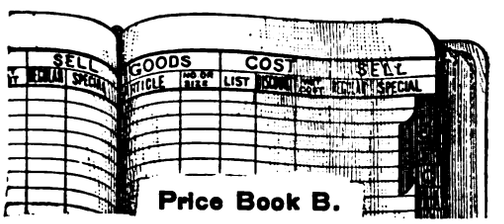
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



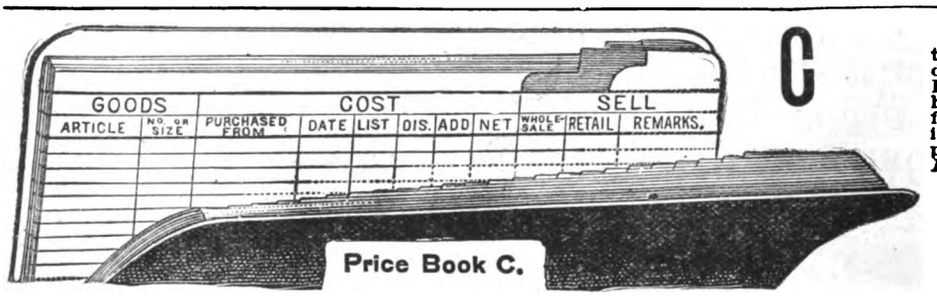
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

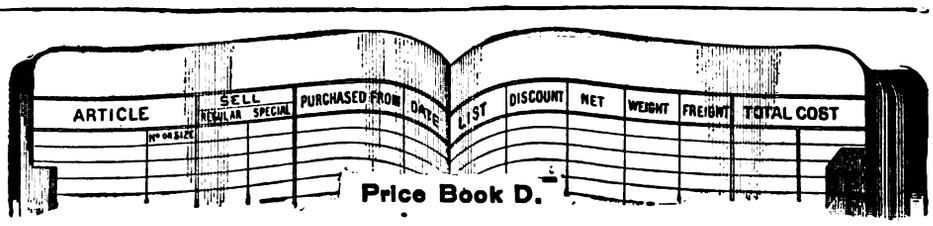
B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¼ inches.***

FOUR EDITIONS:



C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

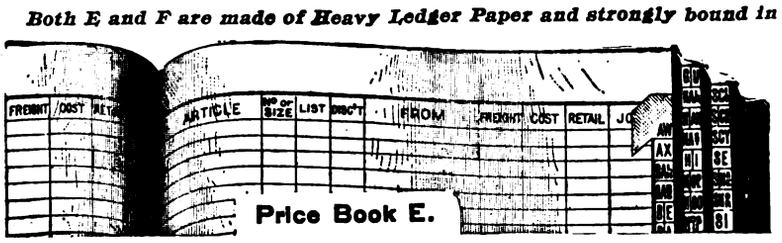
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50

D

Price Book D.



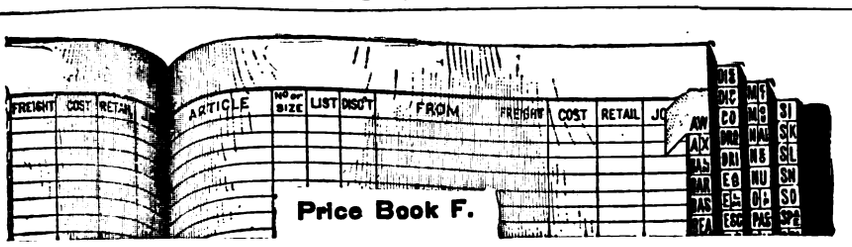
MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to **AU**	For Chisels,	turn to **CH$^{I}_{U}$**	For Iron,	turn to **IRO**
" Parers, Apple	" **PA$^{P}_{R}$**	" Cutlery,	" **CUT**	" Irons,	" **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

E



Price Book E.

OLD SUBSCRIBERS AND NEW

May take advantage of the following liberal offers:

1. "American Hardware Trades Reference Book," published by Thomas Publishing Co., with "HARDWARE" for one year, will be sent on receipt of **$1.50.** Those who are already paid subscribers to "HARDWARE" will receive the book, on sending **50c.** This book is a complete directory of the manufacturers of Hardware in the United States. Each manufacturer is classified under the name of every article he makes. The financial rating is given in each case; 8000 Names; 25,000 Headings.

---

2. "Ladd's Discount Book," with "HARDWARE" for one year, for **$3.00** Single Index, and **$4.00** Double Index. Present subscribers will be credited for one year in advance. If you have to calculate discount this comprehensive work will save many times its price in time, trouble and mental strain. Its comprehensive character may be realized from the fact that it contains nearly 200 pages of positively accurate tables or more than 120,000 computations giving at a glance the net of any sum at all discounts from 1 per cent. to 95 per cent. together with a great range of combinations.

---

3. "American Hardware Store," with "HARDWARE" for one year, for **$3.00.** The "AMERICAN HARDWARE STORE," containing 450 pages and 500 illustrations, is an exhaustive treatise on the most approved methods used by the successful merchants of this country to arrange, display and sell Hardware. It i edited by R. R. Williams, editor of the *Iron Age*, and published by the David Williams Co., of this city, at $3.00. By a special arrangement, we are enabled to combine "HARDWARE" with the book at the same price. Present subscribers will be credited for a year, in advance of their present subscription.

Fill out Order, and address as below:

PACKED ONE DOZEN IN A BOX.

The Turn Table "'98" Apple Parer

(With Push-Off'.

THE latest and we believe the best Apple Parer for household use on the market. Combines the principles which made the original TURN TABLE PARER so popular with distinct new features which add materially to its effectiveness and warrant the assertion that it is superior to all others in its class.

As the cut shows it is inverted so that parings fall clear of working parts. It pares unusually close at both ends of the apple. The knife as it passes the end of the fork recedes, leaving abundant room for the hand when placing the apple on the fork. The Push-off is entirely automatic, simple but positive. It works like a charm. This machine is made in the most thorough manner and sold for a little money. Examine before purchasing any other.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

THE POPULARITY

Of our premium list, evidenced by the eagerness with which new subscribers are availing themselves of the opportunities offered, has compelled us to extend the time limit. We will therefore continue this offer until further notice to **NEW 1898 SUBSCRIBERS.**

ALL THE NEWS. **HARDWARE** HARDWARE EXCLUSIVELY.

Needs no introduction to the Hardwareman. He already knows what a valuable adjunct to his business this semi-monthly visitor is, with its reliable "Prices Current," its "Market Reviews" and its general news of interest to the Hardware trade.

FOR $1.00 We will send "**HARDWARE**" for one year, and ANY **ONE** of the following articles:

A dating stamp that will last till 1902, with 12 special entries for marking letters and bills.

Huebsch's Year Book.

A 365-page Cloth Bound Diary—one page for each day in the year—4½x9 inches, bound in flexible cloth covers. Invaluable to merchants, manufacturers, bookkeepers, clerks, etc.

Indexed Coupon Books

representing one hundred dollars—to enable you to put your business on a cash basis—do away with pass books——to prevent bookkeeping errors. No disputes over accounts—no delinquent debtors or bad accounts. Used throughout the country now instead of credit system.

A numbering stamp, which will number from 1 to 999,999. You can number every article in your store with this stamp. It is indispensable to the careful retailer.

FOR $1.25 We will send "**HARDWARE**" for one year and your choice of the following six premiums:

1. A Perfect Fountain Pen . . . . with 14 kt. gold pen and a filler, warranted to give the most satisfactory results. Made by one of the oldest fountain pen houses in America, and fully guaranteed. . .

2. A Silver Mounted Stationery Set. Seal, letter opener, and paper knife with pearl blade—that gives an air of elegance to your desk. . . .

3. Huebsch's Year Book . . . . (large size), 6x9 inches, bound in flexible cloth, made to last. IT IS YOUR BUSINESS MEMORY, and will not fail you.

4. If You Have a Good Name . . . you may like to see it in your window. We send you ten of the best white enamel 4-inch letters, with a half pound of best cement and full instructions for putting up. If 4-inch letters are too large, send for twenty 2-inch letters. If you require more than the quantities specified, we will send you extra letters; 4-inch at 6 cents each, and 2-inch at 3 cents each. . . . . .

5. Half Dozen Photographs. . . . . Send us any photograph, with your name and address written plainly on the back, and we will return it to you together with six medallion copies of the original, mounted on celluloid, with a wire stand. We guarantee the medallions to be as good as the original. . . . .

6. Bushnell's Price Book . . . bound in seal morocco, 4¾x6⅞ inches, 200 pages, adapted to the use of the traveling man, the home salesman and the office. Neatly indexed, red edged, ruled faint, printed headings. This practical Price Book is in almost universal use. . . . . .

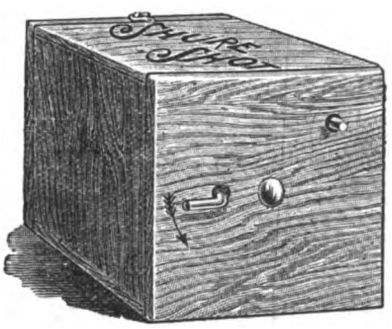
HARDWARE PUBLISHING CO., No. 143 CHAMBERS STREET, NEW YORK CITY.

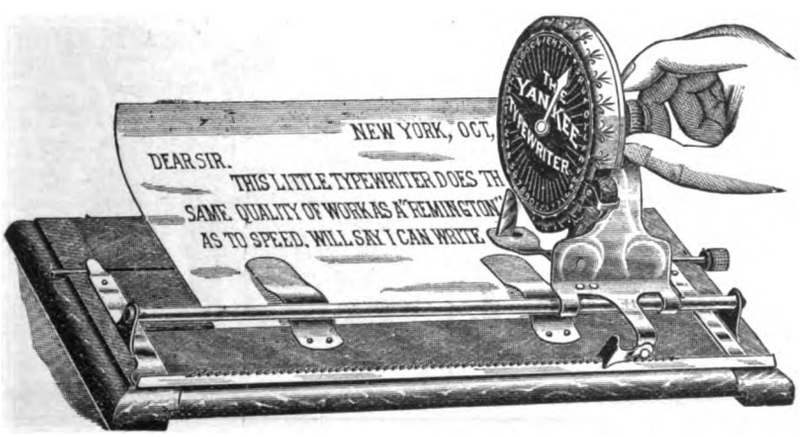
Digitized by Google



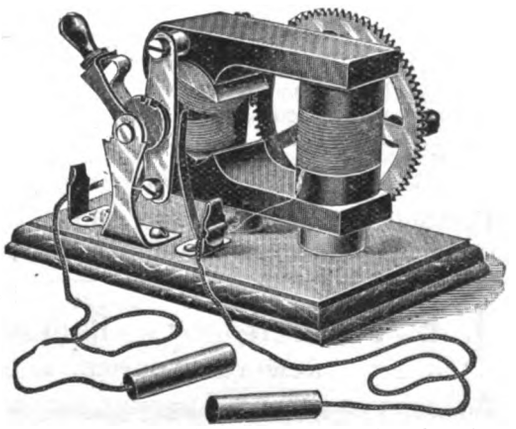
You Live

In hopes of always securing the greatest "helps" to your business. "*HARDWARE*" is a "help." It helps the dealer to buy economically, and helps the manufacturer to sell extensively. "*HARDWARE*" for one year, and any one of the following attractive premiums sent post paid for ***$1.50.*** This offer applies to

NEW 1898 SUBSCRIBERS ONLY.



A perfect Sewing Machine. "The Baby" It uses regular Wilcox & Gibbs needles and ordinary machine thread. It is strong and simple; won't get out of order; can be clamped on any table, and is so constructed as to make it almost impossible for the smallest child to injure itself with the needle.



Just think—a complete Camera and an outfit to print, develop and mount. Makes a picture 2½x2½ inches, and its work compares favorably with higher-priced ones of which it possesses the best features, including an instantaneous shutter, adjustable to time exposures if desired, and operated by a lever and button just as your $50 outfit is.

An Open-Faced Nickel-Plated Watch; fully guaranteed for a year. Winds and sets in back of case, and will stand rough usage, and keeps as good time as an expensive watch.

The Yankee Typewriter.—Will write 15 to 20 words a minute; will take any size paper, from postal card to foolscap size. Has automatic carriage and paper feed. Mounted on highly finished hardwood base, and packed in a strong wooden case.

An Electric Magnetic Machine.—A wonder of mechanical perfection. Supersedes the old-style medical batteries, and gives a stronger current without the expense of renewals It has a current regulator which can be adjusted to a nervous child or to overpower the strongest man.

OF COURSE, YOU TAKE A MAGAZINE,

Probably one in the subjoined list, if it is not, let us know, and we'll put it there, The first column shows the price you would have to pay for the magazine alone. The second column indicates the price at which we will send you "HARDWARE" and the magazine for a year. In many cases you will find the combined price is no more than the single one, and you know you can't afford to do without "HARDWARE." This offer applies to **New 1898 Subscribers only.**

WANTED TEN OLD BICYCLES.

New HOWARD CHAINLESS
To be given in exchange.

OUR Advertising Department proposes to give ten latest Improved Howard Chainless Bicycles, valued at $125 each, in even exchange for an equal number of the oldest bicycles of any make, in good order and condition for use. Awards to be decided from applications sent in before the 4th of July.

All You Have to Do is to send to us in a sealed Envelope:—1. Your name, residence and postoffice address. 2 The name, factory number and description of the bicycle. 3. If you want our illustrated catalogue send two 2-cent stamps.

If you have an old bicycle you merely send the required information. It may bring to your door the best bicycle in the world in exchange for your old one. This is no scheme to secure a payment, subscription, or admittance for an agent. We want the names of people who can use good bicycles. We make HOWARD CHAINLESS BICYCLES exclusively and want to sell one or two in every town this season. Have been making chainless bicycles for years. If no agent in your town handles the Howard Chainless we will allow the first person who buys a liberal amount for his old wheel and offer him an agency.

Advertising Department **HOWARD CHAINLESS CO.,** 760 Summer Ave., Newark, N. J.

HARDWARE DEALERS SELLING BICYCLES

Are making a pleasant and profitable addition to their business. More Hardware Dealers are selling **"Imperials"** as a side line than any other class of merchants, and WHY?

"Imperial Wheels" The Go-Lightly Kind

"EVERYTHING IS COMING UP."
BUSINESS IS BETTER AND THERE WILL BE
A LARGER DEMAND THAN EVER FOR OUR

Sheep Skin Mitten.

Acknowledged to be the best article for polishing stoves, as it does away with the old time dirtiness of the work, making this work a pleasure. Also invaluable for polishing brass or glass, or silverware, which it does not scratch. For tan shoes and cleaning bicycles it has demonstrated itself a conspicuous success.
